For Immediate Release
February 16, 2010

The National Energy Technology Laboratory (NETL) has selected Jessica Sosenko as a technology transfer analyst. Sosenko will work on protecting NETL inventions through disclosures and patents, and commercializing the inventions through various technology transfer agreements. Previously, she worked on supporting these functions as a contractor to NETL. Prior to that, she worked as a patent attorney for law firms and a start-up company local to Pittsburgh, Pa.

Sosenko grew up in Weirton, W.Va. and earned her JD, MBA, and BS in mechanical engineering from West Virginia University (Morgantown, W.Va.). She lives in Imperial, Pa.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
