For Immediate Release
August 7, 2009

The National Energy Technology Laboratory (NETL) has selected Steve Mascaro as a general engineer. He will work on implementation and management of commercial and near-commercial scale demonstration projects related to clean/efficient coal-based power systems. Previously, he worked on building energy management projects for Ultra Electronics-ProLogic.

Steve grew up in Bridgeport, W.Va. and earned a bachelor of science in chemical engineering from West Virginia University. He lives in Morgantown with his wife Tina and children Antonio and Alexa.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – "the ENERGY lab" – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
