For Immediate Release
June 12, 2009

The National Energy Technology Laboratory (NETL) is proud to announce that William A. Rogers has been awarded a Silver Award for Excellence in the Outstanding Supervisor/Manager in a Professional Series category from the Pittsburgh Federal Executive Board (FEB).

FEB held its 26th annual Excellence in Government Awards Program luncheon, where the awards were presented, at the Westin Convention Center in Pittsburgh. NETL employees took home several of the awards.

Rogers is a Division Director at NETL in the Computational Science Division, working on the simulation of advanced energy systems. He grew up in Grafton, WV and earned a Ph.D. in Mechanical Engineering from West Virginia University. He lives in Grafton.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – "the ENERGY lab" – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
