For Immediate Release
August 17, 2009

The National Energy Technology Laboratory (NETL) has selected S. Brett Humble as a physical scientist. He will work with state energy program projects. Previously, he worked as development director for Trinity Christian School.

Humble grew up in Piketon, Ohio. He earned his bachelor of science degree in natural science with a concentration in environmental science from Shawnee State University and his master of public administration from West Virginia University. He lives in Morgantown, W.Va.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
