For Immediate Release
Oct 14, 2009

The National Energy Technology Laboratory (NETL) has selected David Ollett as a project manager. He will manage weatherization projects. Previously, he worked as a product engineer in insulation and roofing for Owens Corning.

Ollett grew up in Pittsburgh and earned a B.S. in industrial engineering from Pennsylvania State University (University Park, Pa.) and an M.B.A. from The Ohio State University (Columbus, Ohio). He is relocating to South Park, Pa.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – "the ENERGY lab" – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
