For Immediate Release
October 26, 2009

The National Energy Technology Laboratory (NETL) has selected Katherine Kweder as a general engineer. She will work on energy assurance plans. Previously, she worked as an electrical sales engineer with Eaton Corporation.

Kweder grew up in Charleston, W.Va., and earned a bachelor's degree in industrial engineering from West Virginia University. She lives in Morgantown, W.Va.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
