For Immediate Release
March 31, 2009

The National Energy Technology Laboratory (NETL) has selected Daniel Nardozzi as a general engineer. Nardozzi will work at NETL's Morgantown, WV, research site. Most recently, Nardozzi worked on developing and promoting best practices in high performance residential buildings. In his new position, he will help to develop energy conservation initiatives for commercial building applications.

Nardozzi lives in Moon Township, PA. He grew up in Pittsburgh, PA. He holds a B.S. in mechanical engineering technology from the University of Pittsburgh at Johnstown and an M. S. in engineering management from Robert

Morris University.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – "the ENERGY lab" – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
