For Immediate Release
April 1, 2009

The National Energy Technology Laboratory (NETL) has selected Rick Griffith as an industrial property management specialist. Most recently, Griffith worked as a property administrator, primarily with the administration of government property assigned to and accountable to all the contracts, grants, and cooperative agreements issued and administered from the NETL Morgantown, W.Va., site. In this new position, Griffith is responsible for all government property involved with contracts and financial assistance awards, government property utilization and accountability, and motor vehicle management in support of NETL..

Griffith lives in Morgantown. He grew up in Kingwood, W.Va., not far away. He is a Level III, Certified Personal Property Manager, recognized by the Department of Energy Acquisition Career Development Program.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
