GRADUATE MEDICAL AND PROFESSIONAL EDUCATION
STATEMENT OF INSTITUTIONAL COMMITMENT

Womack Army Medical Center (WAMC) will provide the necessary educational, financial and human resources to support Graduate Medical Education (GME) programs in which residents and other military healthcare graduate trainees obtain required educational experiences, scholarly activity and faculty supervision, while practicing safe, effective, efficient, high quality patient care.

The documents that have been developed to conduct GME in a scholarly environment demonstrate an unwavering commitment to excellence in medical education and patient care. The documents empower WAMC to serve as the GME sponsoring institution and ensure its leadership, organizational structure, and resources are sufficient to achieve substantial compliance with the Accreditation Council for Graduate Medical Education's (ACGME) institutional requirements as well as any of the other educational accrediting organizations and the needs of the Uniform Services.

The United States Army maintains an active duty force of physicians and other medical personnel. Part of the mission of the United States Army Medical Command is to provide graduate medical and professional education opportunities so that a full range of options for professional growth and development are available to physicians and other professional healthcare active duty soldiers. This in turn increases retention, provides academic opportunities, allows the development of clinical research and improves the quality of patient care.

Womack Army Medical Center is designated by the United States Army Medical Command to carry out the mission of graduate medical and professional education.
