Here are several updated (through 08-09) graphs that I have used in various older reports.

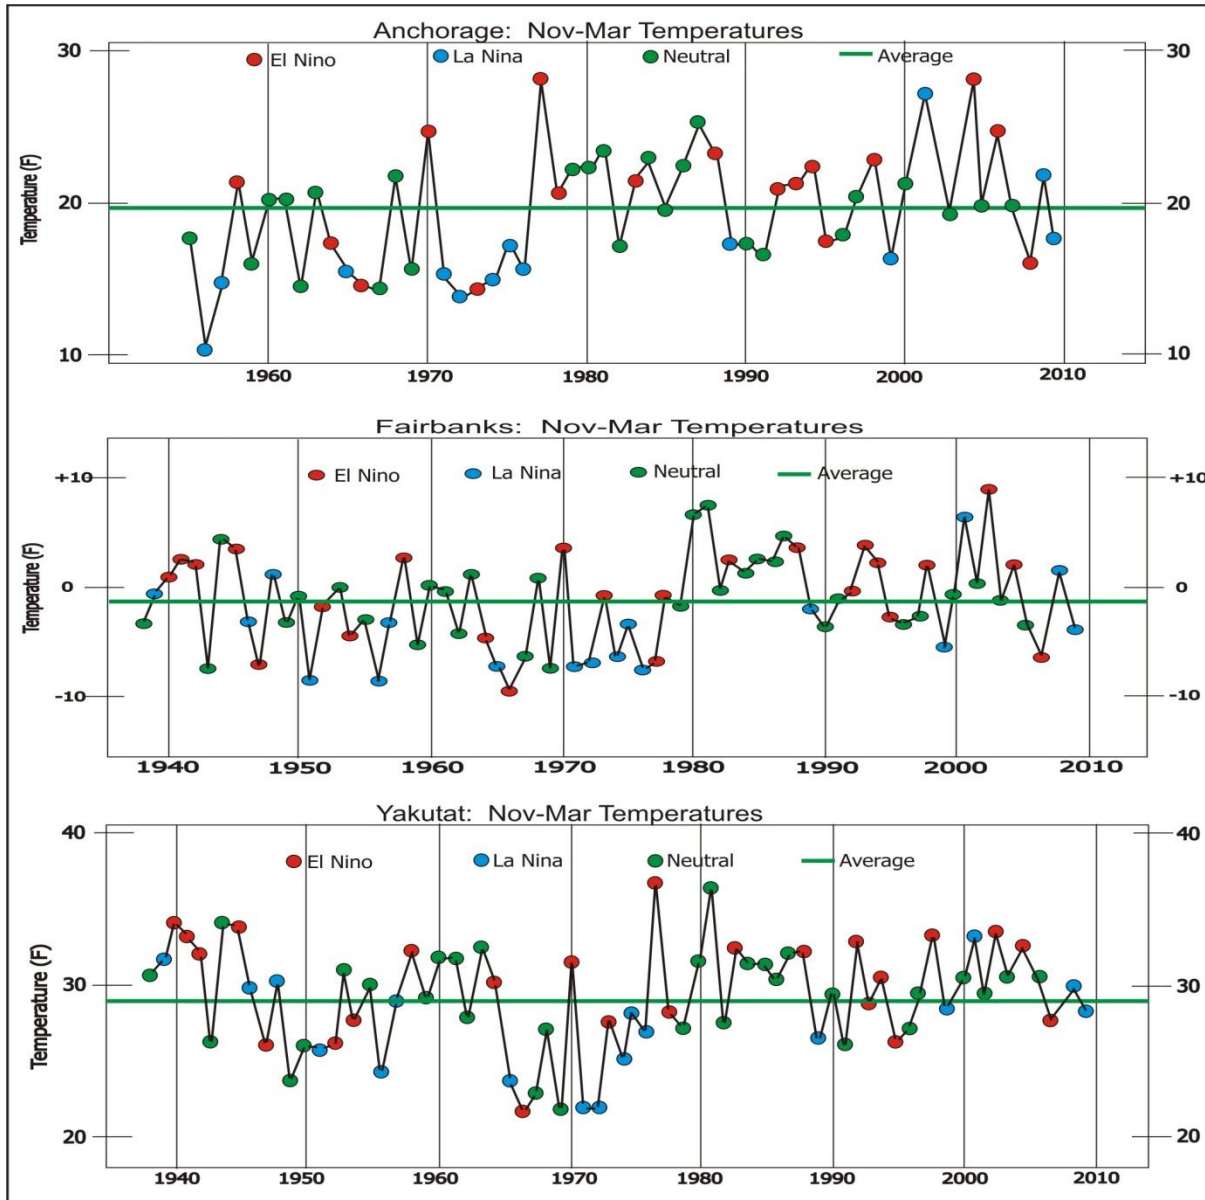

Figure 1: These are winter (November-March) air temperatures at three different locations. Color of dot indicates phase of ENSO during that period based on the ONI.

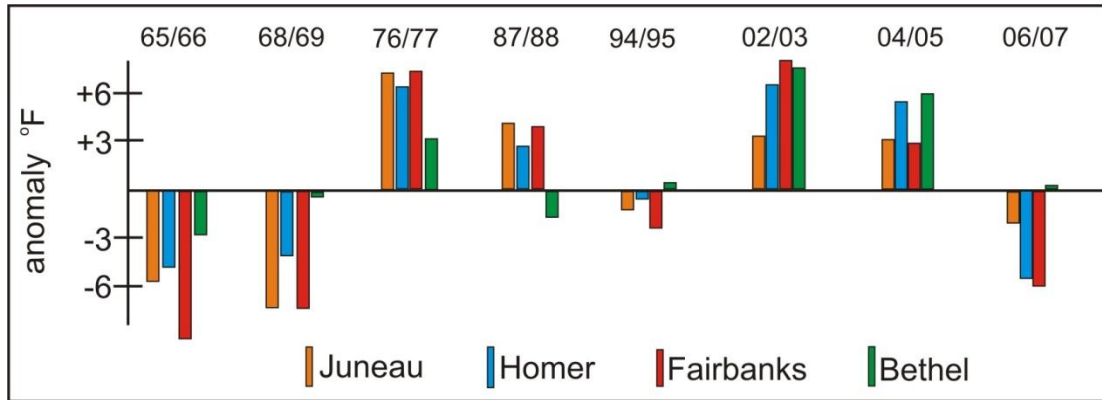

Figure 2: Winter (Nov-Mar) air temperature anomalies (deviations from the long-term average) for eight El Niño winters.

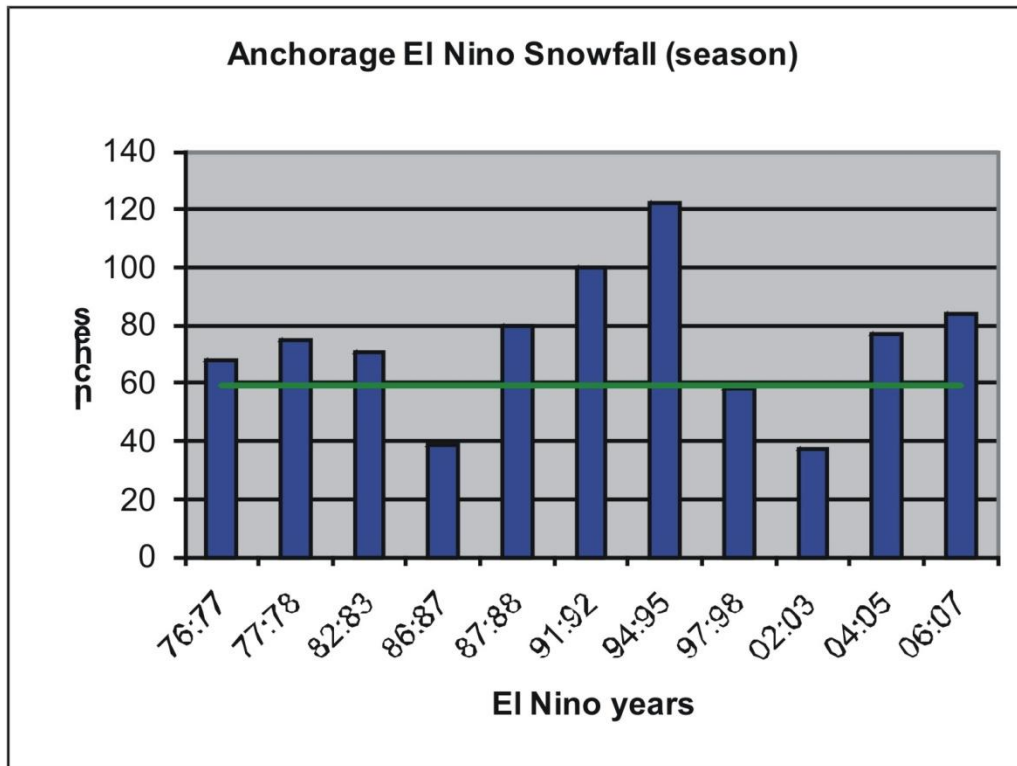

Figure 3: Snowfall (inches) in west Anchorage for El Niño years.

Figure 4: Frequency of the number of air temperature events per calendar year. Black line is a 3-year running mean.

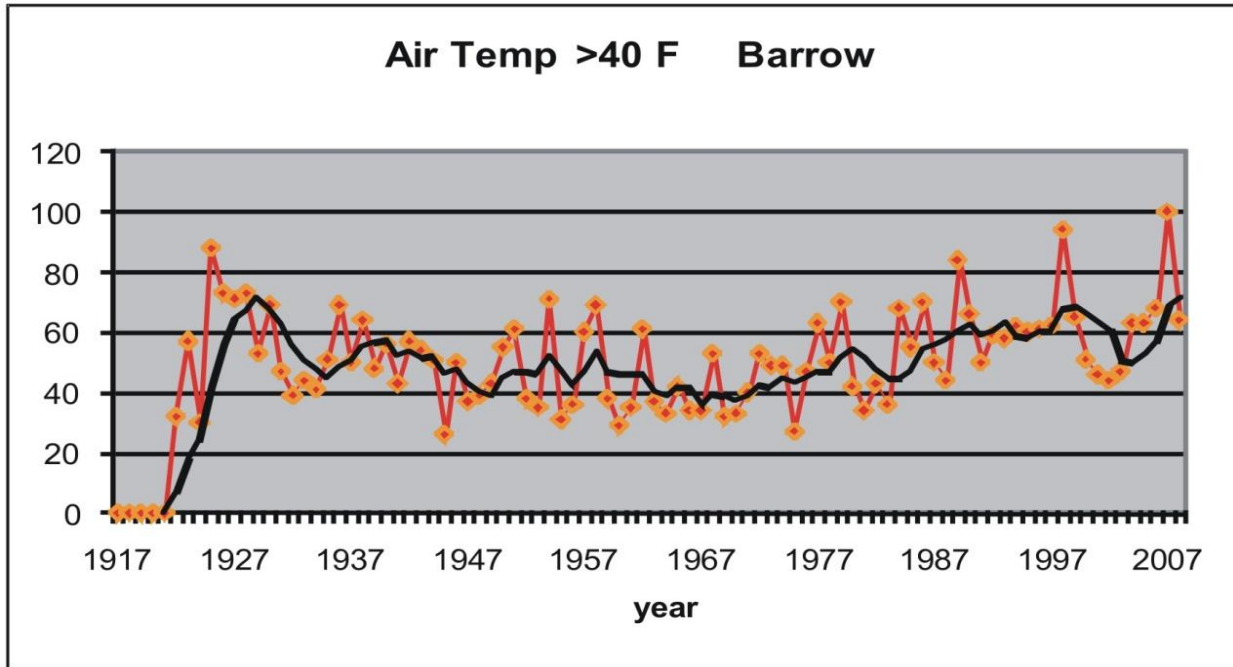

Figure 5: Frequency of the number of air temperature events per calendar year. Black line is a 3-year running mean.

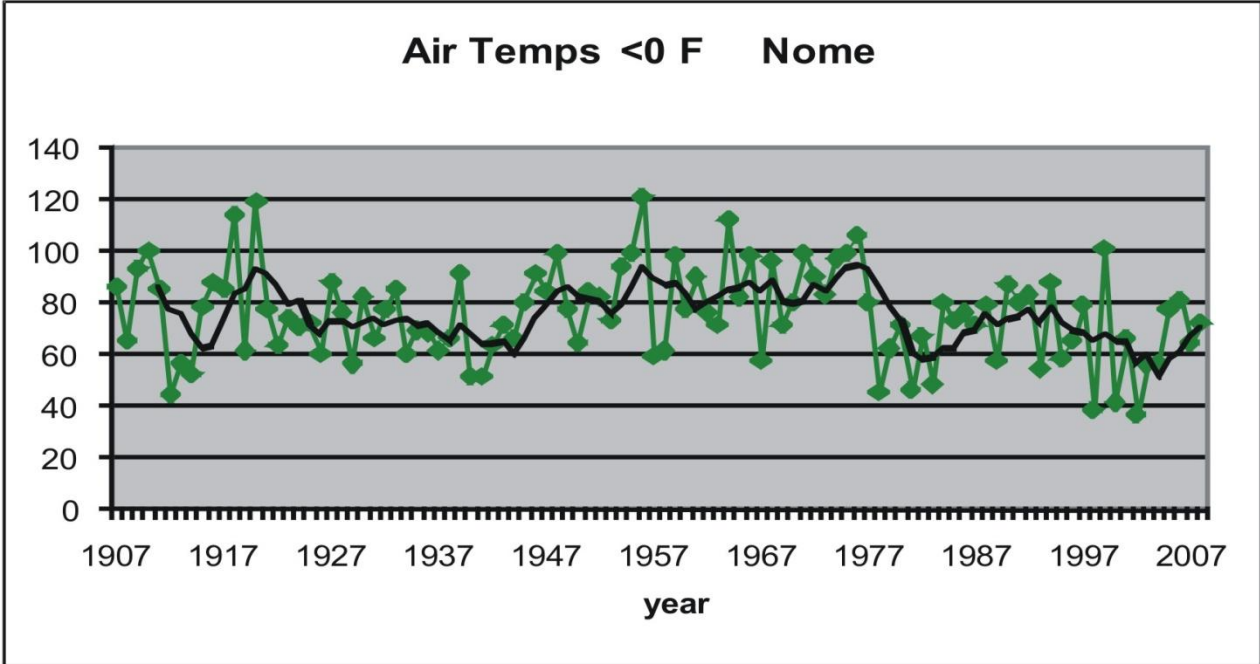

Figure 6: Frequency of the number of air temperature events per calendar year. Black line is a 3-year running mean.
