AMERICAN HEALTH PLAN

Essential Features: A Medical Insurance Home for All

- I. Health Insurance Coverage for each Citizen through Participation in any one of a broad range of Affinity Health Groups (AHG's) characterized by a common bond, chartered at the state level, but operating locally, with a federal tax number
- \* Federal definition of a Basic Benefit Plan for All Insureds in all Affinity Groups
  - \* Shared Responsibility of Employer, Employee along with each citizen
  - \* Simplification of Paperwork
  - \* Portability
- II. Market Standardization of Private and Public Insurance Marketplaces to include nine supplemental plan options beyond the Basic Plan
- III. Quality Assurance
- IV. Anti-Trust, Medical Malpractice and Tort Reform
- V. Medical Education

**AMERICAN HEALTH PLAN**

**SUMMARY**

**Assuring Health Coverage For All**

**I. PURPOSE AND BASIC ADMINISTRATIVE STRUCTURE**

**--A Medical Insurance Home For All**

Every American should be covered by affordable, high quality private health insurance. Publicly assisted insurance should be provided only as a last resort. In achieving this goal, reformers must focus on covering people, not medical incidences and building on the employer-based system already developed in our nation. In Ohio's Ninth District, most people are very satisfied with the quality of care received, and a majority are satisfied with the type of coverage they have. The main concerns of persons in our region are: 1) insuring against catastrophic costs of long-term custodial care; 2) covering pre-existing conditions; 3) choosing the doctor a person desires; 4) keeping costs affordable; 5) streamlining the paperwork involved in medical insurance; 6) addressing the costs of long term care; and 7) covering the unemployed, part-time workers, small business employees and the self-employed. By building on the system now in place and remedying the shortcomings, those who are satisfied will remain satisfied and those who are left out will be included.

The economic impact of the lack of insurance for over 37 million Americans at any given point in time, with 8 to 10 million

1  
2  
3  
4 people chronically uninsured, cannot be ignored. In our area, a few  
5 hospitals absorb more than 40% of the care provided as  
6 uncompensated. Thus costs are shifted to privately insured  
7 individuals, with insurance companies passing those costs onto  
8 subscribers. Reform of the system will eliminate hospitals' uneven  
9 absorption of uncompensated care and will not allow cost shifting.

10 Both employers and employees will be expected to make  
11 contributions to pay for coverage. The system must be structured in  
12 a way that allows individuals to control their plan as part of a  
13 group, with employers and employees sharing costs (or the government  
14 where subsidy is necessary).

15  
16 **-- Affinity Groups**

17 The formation of carefully administered "affinity groups" of  
18 insureds at the local level--as defined by the states--including  
19 incentives to allow those on Medicare, Medicaid, and other  
20 government subsidized plans to join such groups--will provide a  
21 "medical insurance" home for each person. Each person must be  
22 enrolled in such a group. These groups will assure careful  
23 management and greater accountability of both the insurer and  
24 insured, will engender personal and more holistic care for each  
25 patient, will curb cost-shifting, and will allow for greater cost-  
26 consciousness through careful attention to each individual in every  
27 affinity group. There will be no set number of such affinity groups  
28 at the local level, but some floor will have to be set by each state  
29 on the minimum enrollment level (probably 1000 persons). This

1  
2  
3  
4 requirement will guard against insolvency of smaller plans. Each  
5 citizen's enrollment, along with other minimal quality assurance  
6 information from each affinity group, will be reported to a National  
7 Health Board through the federal income tax system, with each  
8 affinity group being assigned a tax identification number. Through  
9 affinity groups, every citizen will be covered and assured  
10 continuity of care. Each person will be insured for all medically  
11 necessary conditions. Their insurance will be portable, continuous,  
12 and will provide coverage throughout the beneficiary's lifetime.  
13 Essential to high patient satisfaction is broad physician choice, to  
14 be negotiated through each affinity group.

15 Most affinity groups will be formed through employer health  
16 plans, but other alternative structures can be created locally  
17 through state law to achieve universal coverage. States and  
18 localities will have some discretion in defining the affinity group  
19 structure. Those citizens who fall into no other group will be able  
20 to obtain health benefits through the Federal Employee Health  
21 Benefit structure organized at the local level as an affinity group.  
22 Further, states will be given latitude to create other affinity  
23 groups to assure coverage of self employed persons, farmers,  
24 unemployed persons, veterans' health clinic users, public health or  
25 WIC site users, community health clinic users, Chamber of Commerce  
26 small business consortia, senior citizens center users, and  
27 hospital-based affinity groups serving low and moderate income  
28 insureds. Medicaid insureds and persons with no coverage will thus  
29 have several choices locally to assure competition between groups.

1  
2  
3  
4 Medicaid as it currently exists will disappear.

5 Federal incentives also will allow, but not require, Medicare-  
6 eligible people to obtain supplemental insurance from an affinity  
7 group including through their former employer. If a Medicare  
8 eligible person joins such an affinity group, the National Health  
9 Board/HCFR will pay the group 95% of the cost of covering a retiree,  
10 while former employers will pay 5% of the normal Medicare cost.  
11 Former retirees will then have access to the common bond, benefits  
12 and freedom from paperwork which will be handled by the  
13 administrative services of that employer's affinity group. Further,  
14 the employer will retain insurance responsibility for their  
15 retirees. It is anticipated the typical affinity group will be able  
16 to deliver the Medicare portion for 90 cents on the Medicare dollar.

17 Insureds will use their AHG as their entryway into the health  
18 care delivery system. Through the locally organized AHG's, people  
19 will have a choice of primary care health care providers and  
20 physicians, and will be guided through the health care delivery  
21 system by that provider. The AHG will monitor each insured's  
22 medical history and continuum of care to guarantee a strong link  
23 between the individual and the health care delivery system. Careful  
24 management of each person in the AHG will ensure consistent, quality  
25 care in the most efficient manner. Keeping the AHG's at the local  
26 level maintains a sense of community and belonging which should  
27 encourage the members of the AHG to continue as healthy a lifestyle  
28 as possible.

29 Federal override of state requirements in specified areas,

1  
2  
3  
4 including licensing for nurses, advanced practice nurses,  
5 physicians, and physicians assistants will be allowed.

6 Existing employer-based plans will be encouraged to emulate  
7 "affinity groups," that is, groups of individuals with some common  
8 bond, or "medical insurance home," that resemble self-administered,  
9 self-insured plans where insureds are all covered, pre-existing  
10 conditions accepted, costs monitored, and attention to the insureds'  
11 welfare is the hallmark.

12  
13 **-- Controlling Rising Costs and Promoting Responsibility**

14 Through careful administration of the plan by persons hired  
15 through the plan and the inclusion of some consumers from each AHG  
16 on the governing board, each AHG will promote localized  
17 responsibility to strengthen plan management, quality, and cost  
18 consciousness. Over a five year period, consumer representation  
19 will be graduated to a maximum representation by consumers of up to  
20 one-third of the AHG's boards, as provided by state and federal law.

21 Careful administration by affinity groups is essential to  
22 curbing private and public costs. There are several indicators that  
23 the current system has flaws that the affinity group structure can  
24 address. First, it is assumed in this legislation that it not cost  
25 caps but rather careful administration by affinity groups that know  
26 their insureds' medical histories, with proper confidentiality  
27 maintained, and encourage their proper use of benefits that are the  
28 essential elements in curbing costs.

29 The current system must also be reformed to encourage more

1  
2  
3  
4 responsible personal behavior that contributes to healthy  
5 lifestyles. States will encourage affinity group insurance rates to  
6 credit responsible behavior, and discourage unhealthy behavior.  
7 Similarly, good usage of the system and attention to one's own  
8 health needs and those of the family are not generally rewarded.  
9 The current publicly subsidized insurance demonstrates that people  
10 left to fend for themselves in accessing the system do not always  
11 use it properly. For example, people using Medicaid may not  
12 correlate inappropriate usage of emergency rooms with higher costs.  
13 Similarly, those who must find their own private health insurance  
14 may not be able to obtain the plan best suited to their needs  
15 because of the complexity of the existing insurance market. It is  
16 not surprising that many individuals carry unnecessary, duplicative  
17 private health insurance coverage for services that drive up costs  
18 overall. Individuals need help in using this complicated system.  
19 States will be directed to community rate AHG's.

20 Second, affinity groups can help individuals more effectively  
21 access and assess the broad range of health care delivery options on  
22 a more regular basis. Many current health plans really do not know  
23 their individual insureds, that is, there is little or no case  
24 management. For example, Medicare and Medicaid provide an accepted  
25 insurance payment stream that treats medical incidences. This  
26 system, however, does not provide a "medical insurance home" for  
27 insureds. These systems do not help individuals negotiate the  
28 current system at the local level even in such simple matters as  
29 paying premiums and bills, or in coordinating prescription drug

1  
2  
3  
4 purchases. They do not encourage a patient to use his/her plan  
5 wisely or to access preventive measures. They do not encourage "the  
6 system" to know the insureds personally. The practice of medicine  
7 is sometimes lost in the bureaucracy of reimbursement systems. Too  
8 often, the current system places medical decisions in the hands of  
9 billing clerks, resulting in medical care being directed by  
10 financial intermediaries rather than persons closest to the patient.  
11

12 **-- Ending Job Lock and Uncompensated Care**

13 Finally, able-bodied persons who are not working but receiving  
14 the entirety of their health insurance through government subsidy  
15 will be encouraged to pay back a portion of their benefits through  
16 voluntary service in a local Community Services Corps working in  
17 public health, long term care facilities, and community outreach  
18 programs such as shelters, school kitchens, and school aftercare or  
19 day care centers. This concept also can be more fully developed in  
20 the upcoming "Welfare Reform" legislation or the expansion of the  
21 National Community Service program.  
22

23 **II. MARKET STANDARDIZATION OF PLANS AND STREAMLINING ADMINISTRATIVE**  
24 **COMPLEXITY**

25 **-- Simplify the Market**

26 The federal government will establish standards for a Basic  
27 Benefit Plan for all insureds in affinity groups. The federal  
28 government, through a National Health Board, will require the public  
29 and private insurance market to jointly standardize nine

1  
2  
3  
4 supplemental plans beyond the basic plan. Through these elective  
5 insurance options, for instance including vision, dental, interstate  
6 and foreign travel, long term care, and abortion as an exceptional  
7 reproductive option in publicly subsidized plans, health services  
8 beyond the basic plan will be available to all citizens. This  
9 approach also will help streamline current administrative insurance  
10 complexity to reduce administrative overhead leading to higher  
11 costs. In addition, the basic and supplemental plans will balance  
12 services among prevention, acute care, rehabilitation, and chronic  
13 disease management. At least two of the health insurance  
14 supplemental plans must begin to phase in an insurance system to  
15 manage long term care. Although skilled nursing long term care is  
16 covered as a basic benefit along Medicare guidelines, insurance to  
17 protect against the catastrophic costs of long term custodial care  
18 must be developed. Some of the plans will guarantee that the  
19 "Family and Medical Leave" health benefits are available as an  
20 option, thus replacing the current system wherein coverage is uneven  
21 and excludes most families.

22 The utilization of one standard claim form for all provider  
23 admissions which the provider submits to the insurer will be  
24 required. Further, all providers will be required to submit claims  
25 initially to the affinity group rather than the patient to reduce  
26 paperwork error as well as patient anxiety, and then to each patient  
27 for verification and final processing for sign-off.

1  
2  
3  
4  
5 **QUALITY ASSURANCE**

6           Quality assurance can be strengthened by requiring consumer  
7 information for each affinity group's performance. The federal  
8 government through the National Health Board will direct the states  
9 to issue this report which will include all providers, physicians,  
10 and insurers rated on performance record and rate disclosures, as  
11 well as comparisons of benefits and costs for all insurance plans on  
12 an annual basis on a standard form.

13  
14 **ANTI-TRUST, MEDICAL MALPRACTICE AND TORT REFORM**

15           Anti-trust, medical malpractice and tort reform provisions will  
16 be incorporated in any federal legislation. Alternative Dispute  
17 Resolution (ADR) will be mandatory before a malpractice claim can be  
18 tried. If the case goes to trial, the results of the ADR must be  
19 used as evidence. Compensation will be allowed for actual economic  
20 damages, and a cap will be placed on pain and suffering awards.  
21 Punitive damages will go into a state health insurance fund to  
22 support the state's health insurance subsidy payments. Attorneys  
23 who accept frivolous lawsuits will be financially sanctioned, with  
24 the money going into this state health insurance fund. Anti-trust  
25 regulations will be relaxed to allow a broad range of providers to  
26 negotiate with affinity group plans.

27  
28 **MEDICAL EDUCATION**

29           In order to maintain enough committed physicians and other  
30

1  
2  
3  
4 health care professionals, and to build on the number of family  
5 practice and primary care physicians, the medical education system  
6 must ease the financial burden on its students. Federal policy will  
7 be implemented to reduce interest rates on student loans to a lower  
8 percentage than the current rates. A percentage of a new  
9 physicians' patients will be referred through the local affinity  
10 groups each year, thereby allowing the physician to gradually reduce  
11 accumulated debt financed through government assistance.

1  
2  
3  
4  
1                   **COMPLETE TEXT**

2                   **SECTION ONE**

3  
4                   **ADMINISTRATIVE STRUCTURE**

5                   The heart of the system will be "Affinity Health Groups" set up  
6                   at the local and regional levels, as defined by each state, with  
7                   some federal guidance in order to maintain uniformity. (Refer below  
8                   to federal government's role.) In order to capitalize on  
9                   marketplace innovation, flexibility will be accorded the Affinity  
10                  Health Groups in terms of how they organize and choose and pay  
11                  participating providers. Functions of the Affinity Health Groups  
12                  (AHG) will be as follows:

13                 Marketing: Plans will have distribution systems (direct sales or  
14                 agents/brokers) to sell products to employers, labor organizations,  
15                 and other affinity groups.

16                 Risk Assumption: The AHG's will accept full financial risk for the  
17                 premium payments received. The AHG's, in turn, will share that risk  
18                 through their relationships with providers. Premiums will be  
19                 community rated with some effort within each group dedicated to  
20                 credit healthy lifestyles, in order to ensure an equitable  
21                 distribution of resources. Contracts will prohibit balanced  
22                 billing.

23                 Health Care Delivery System: The AHG will be responsible for  
24                 organizing a full range of provider services for members. An  
25

1  
2  
3  
4 individual's primary physician will be responsible for coordinating  
5 health services needed by the individual. A primary physician is  
6 defined as the first health care provider of choice an insured sees  
7 for care of any medical conditions. The health care provider is  
8 appropriately licensed and includes internists, general and family  
9 practitioners, pediatricians, geriatricians, psychiatrists, clinical  
10 psychologists, and advanced practice nurses.

11 Payment By Plan To Providers: The AHG's will have available the full  
12 range of methodologies to pay providers, from full capitation to fee  
13 for service, to be determined by the AHG. AHG's would thus compete  
14 on the basis of price, service, and provider panels. The  
15 competition of the marketplace will contribute toward cost  
16 containment.

17 AHG's may be organized as for profit or not for profit.  
18 Employers may form their own AHG's to self-insure, and will retain  
19 ERISA preemption for five years, that is, exemption from state  
20 regulations. The National Health Board, in conjunction with the  
21 States, will have authority to decide whether AHG's will continue to  
22 retain ERISA preemption thereafter. Each AHG shall have a governing  
23 board to be prescribed by the states. The states will encourage  
24 over five years the inclusion of up to one-third of the members of  
25 the AHG's governance bodies be elected by its subscribers.

26 Consumers can select annually from among AHG's. In order to  
27 ensure every individual or family is insured through an affinity  
28 group, all AHG's will be assigned a number for income tax purposes  
29 (like school districts are now). Every individual--regardless of

1  
2  
3  
4 income--will be required to file an income tax return, and must  
5 indicate the AHG in which they are enrolled on the tax form.  
6 Individuals and families whose religious or personal views dictate  
7 minimal or no health intervention may exempt themselves from the  
8 system, but in the event health care bills are incurred, must pay  
9 the expense out of pocket or work to reduce the debt through  
10 community service.

11 People who maybe locked into a job because they will otherwise  
12 lose their insurance will now be able to seek alternative employment  
13 and receive coverage, regardless of pre-existing condition from the  
14 first day of employment with the new employer. However, the  
15 employer through the AHG and as regulated by the states, may phase  
16 in depth of coverage of the Basic Plan and percent of contribution  
17 over a period of time. This bill defines 90 days as the target date  
18 for full coverage under the Basic Plan of that new employee.

19 Payment for Insureds Needing Subsidy.

20 Payment for insureds who require federal assistance will be on  
21 a sliding scale fee up to 250% of the poverty level, with the  
22 federal government paying the difference. The budgets of current  
23 federal health insurance programs, such as Medicaid, would be  
24 consolidated and used as the basis for these subsidies. State  
25 governments would contribute their current Medicaid match into the  
26 federal pool. If inequity exists between states on the current  
27 state reimbursement formula, the National Health Board will  
28 recommend changes to restore equity to state contributions within  
29 five years. If additional funds are needed to subsidize necessary

1  
2  
3  
4 insureds, each affinity group could be taxed up to a level proposed  
5 by the National Health Board, in order to attain necessary subsidy  
6 dollars. In addition, employer contributions of greater than 80%  
7 will be considered an available source of revenue for subsidy  
8 purposes. Those insureds who are able-bodied and subsidized but not  
9 working will be required to contribute community service in partial  
10 payment for the services rendered. The framework of this community  
11 service network will be defined by the state, but could function as  
12 an adjunct to the public health system, the National Community  
13 Service structure, or be organized in conjunction with welfare  
14 reform. Because every insured will be required to file an income  
15 tax return, the IRS will verify income for insureds on behalf of the  
16 states.

17 It is the intention of this proposal that health care will be  
18 separated from welfare. Health insurance payments to subsidized  
19 individuals will take the form of Earned Income Health Tax Credits  
20 refunded on an annual basis. The section of the 1986 income tax  
21 revisions which removed millions of low income individuals and  
22 senior citizens from the federal income tax rolls will be revoked.  
23 Thus, every individual/family will be required to complete an income  
24 tax statement which lists the AHG to which the individual belongs.  
25 A minimum 50% contribution toward health insurance premiums of all  
26 full time employees (defined as 1500 hours per year) will be  
27 required from all employers, with the federal government subsidizing  
28 on a graduated basis those employers with less than 25 employees who  
29 both meet the criteria for a federal small business loan and pass

1  
2  
3  
4 the discrimination test for 401(k) plan contributions. Subchapter S  
5 corporations will be exempt from subsidy. Again, employer  
6 contributions of greater than 80% will be considered taxable income  
7 and the revenues derived from this source will be directed toward  
8 paying the insurance costs of low income or other uninsured  
9 citizens.

10  
11 **Federal Government's Role:**

- 12 \* create a National Health Board for federal oversight, financial  
13 involvement, and reporting purposes  
14 \* set a minimum benefit package and require market standardization  
15 of supplemental plans  
16 \* set a minimum contribution for subscribers and employers  
17 \* set the sliding scale fee for subsidized subscribers and fund the  
18 subsidies  
19 \* require community rating by standard metropolitan statistical  
20 areas

21 **State's Role:**

- 22 \* All AHG's will be regulated by the State Department of Insurance  
23 regarding financial solvency. All AHG's will be required to report  
24 to the State Department of Insurance a federally standardized  
25 "report card" showing quality, utilization, outcomes, salaries of  
26 office-holders, and profit margins. The State Department of  
27 Insurance will ensure that all AHG's follow community rating,  
28 guarantee renewals, and cover all pre-existing conditions of each  
29 insured.  
30 \* The State Health Department will be responsible for oversight of

1  
2  
3  
4 medical quality assurance, utilization, and outcomes. The federal  
5  
6 government will assemble this information from all states under a  
7  
8 standard format to be developed by the National Health Board through  
9  
10 HCFA.

11 Underpinning the system of health care is a strengthened role  
12 for public health. The primary focus on public health will be  
13 through its infrastructure of public health nurses, sanitarians,  
14 health educators, and special focus programs as a method of finding  
15 people who fall through the cracks and enroll them in affinity  
16 groups. AHG's will be authorized to contract with the public health  
17 system and other public health providers such as the Visiting Nurse  
18 Service to provide these services to its members. The public health  
19 system holds enormous unmet potential as a focal point for consumer  
20 education to promote prevention and healthy living. The federal  
government should strengthen the public health system, including  
some additional resources, to perform these functions.

**SECTION TWO**

**STANDARDIZATION OF PLANS AND STREAMLINING OF ADMINISTRATIVE  
COMPLEXITY**

**-- Claim Forms**

A standard claim form, based on the White House's Medical Claim Form Prototype, will be developed by the National Health Board in conjunction with HCFA. This form will be used for all medical intervention. With regard to durable medical equipment (DME), a three-part prescription pad will be developed which will allow the physician to use the same form for submission of DME prescriptions to all insurance carriers. One copy of the prescription remains in the patient's chart, and two copies go to the provider of the DME. One copy is subsequently forwarded to the payor.

**-- Credentialing**

Regional credentialing offices--with federal oversight through the National Health Board/HCFA--will be set up to provide uniformity of the physician credentialing process. All health care entities will pay a fee to the regional credentialing office to obtain all necessary information on a physician. This eliminates the tremendous duplication of effort by hospitals, insurance companies, HMO's, and all other health care facilities which must credential their physicians.

1  
2  
3  
4       **-- Other Federal Health Programs**

5       The VA system, CHAMPUS/CHAMPVA, and Medicare will remain, with  
6 individuals utilizing those systems being afforded the opportunity  
7 to join affinity groups or organize into affinity groups.  
8 Individuals always will retain the option of selecting from a number  
9 of affinity groups, but will only be able to be enrolled in one at a  
10 time.

11       **-- Basic and Supplemental Plans**

12       The federal government will establish standards for a Basic  
13 Benefit Plan for all insureds in affinity groups. The federal  
14 government, through a National Health Board, will require the public  
15 and private insurance market to jointly standardize nine  
16 supplemental plans beyond the Basic Plan.

17       **BASIC BENEFIT PACKAGE**

18       With an annual individual/family deductible of \$200/\$400 and an  
19 annual individual/family maximum out-of-pocket expense of  
20 \$1000/\$2000, the following services will be covered in a Tier 1  
21 Basic Benefit Plan:

22       **BASIC BENEFIT PLAN - Tier I**

23       \* prenatal, neonatal, and well baby care covered at 100%

24       \* preventive care, including injections/immunizations, office  
25 visits, and annual physicals, covered at 100%

26       \* prescription drugs and biologicals

27       \* outpatient diagnostic, laboratory and x-ray services, with pre-  
28 certification for high cost tests

29       \* mental health coverage would not be based on a diagnostic code,

1  
2  
3  
4 but rather 100% coverage to include 45 days inpatient; thirty  
5 sessions per year of individual and group therapy will be covered,  
6 with a \$20.00 copay per session.

7 \* long-term case management for severe mental illness

8 \* inpatient care including semi-private room & board, ICU & CCU,  
9 preadmission testing, physician visits, surgeon and technical  
10 surgical assistants, anesthesia, nursing, ancillary services, and  
11 maternity

12 \* inpatient and outpatient surgical benefits

13 \* emergency services defined as life threatening

14 \* Hemodialysis

15 \* chemotherapy and radiation

16 \* skilled nursing and home care based on Medicare guidelines;

17 \* durable medical equipment and prosthetics;

18 \* hospice coverage following Medicare established guidelines;

19  
20  
21  
22 **ENHANCED BASIC BENEFIT - Tier 2**

23 The National Health Board will evaluate the feasibility of  
24 phasing in the following benefits to the Basic Benefit Plan within 3  
25 years after the adoption of this legislation. Means testing will be  
26 required to ascertain which insureds require government subsidy to  
27 meet the costs of their insurance premium:

28 \* specialty care (physical/occupational/speech therapy, podiatry,  
29 etc) covered only when services can reasonably be expected to  
30 restore significant improvement or prevent significant  
31 deterioration;  
32

33 \* reproductive services covered at 80% (in publicly assisted  
34 benefits abortion would not be covered in the basic plan but would  
35

1  
2  
3  
4 be available as an elective option);

5 \* behavioral management techniques;

6 \* two admissions per two years for substance abuse treatment;

7 \* medically necessary plastic and reconstructive surgery.

8 For both Tier 1 and Tier 2 benefits, except where specified  
9 with different payments, coverage will be at 80% up to the maximum  
10 out-of-pocket. After the maximum has been met, coverage will be at  
11 100%. Maximum lifetime limits imposed by insurance companies will  
12 not be allowed, thus eliminating financial devastation because of a  
13 catastrophic illness.

14 Consumers can purchase supplemental plans which provide  
15 coverage in addition to the Basic Plan and the Enhanced Basic Plan.  
16 The supplemental plans will be limited to nine, as described below  
17 (see attached) with graduated premiums.  
18  
19

**SECTION THREE**

**QUALITY ASSURANCE**

The primary objective of quality assurance is to provide consumers with information--in understandable language (use Flesch Test)--in order that they may make quality health care decisions which are cost effective and accountable. This objective will be achieved by requiring the following:

**Credentialing:**

Develop a provider "report card" which includes:

- \* outcome-based indicators which include mortality statistics, infection rate, readmission rate, and complications;
- \* satisfaction indicators which include waiting time standards, length of time for appointments, time spent with patient, communication skills, satisfaction with service and treatment, office location, office policies, and office staff;
- \* financial indicators which include costs for office visits, treatment, missed appointments, and prescriptions.

Tracking will link medical appropriateness with financial appropriateness. Credentialing criteria will be based on the providers' national and regional recognized standards, delineating differences between populations and urban v. rural areas. Physicians will be measured by following clinical pathways of care, as defined by Milliman and Robertson Health Care Management Guidelines. Medical necessity guidelines will follow those established by the Value Health Sciences Medical Review System. The criteria will be developed into an overall quality index which will

1  
2  
3  
4  
5 be consistently measured. AHG's will provide all credentialing  
6 information to subscribers. Federal and State governments will also  
7 assemble this information and make available annually.

8 **Preventive Health Services:**

9 Preventive health services will be developed for all age groups  
10 following the recommendations of both the "Guide to Clinical  
11 Preventive Services: Report of the U.S. Preventive Services Task  
12 Force" and the various medical associations. Both make  
13 recommendations on preventive care based on age groups.

14 **Patient Education:**

15 Information on the following will be provided (in language such as  
16 the Flesch Test) through each AHG:

- 17 \* preventive health care;  
18 \* specific diseases;  
19 \* medications;  
20 \* treatment;  
21 \* living wills, advanced directives, and Durable Powers of Attorney;  
22 \* health risks, patient responsibilities, and non-compliance linkage  
23 of financial costs to patients;  
24 \* monitoring of patient education and outcomes, following the goals  
25 of Healthy People 2000.

**SECTION FOUR**

**ANTI-TRUST, MEDICAL MALPRACTICE AND TORT REFORM**

States will be encouraged to adopt reform of medical malpractice laws and torts by linking federal health subsidies to compliance. Reform should achieve the following goals:

- \* the formation of Alternative Dispute Resolution councils before which the parties must appear before taking a case to trial;
- \* the prohibition of collection from more than one entity in a lawsuit (e.g. collecting from the hospital, all physicians, all nurses, and all staff);
- \* capitation of economic damages will be determined by the state;
- \* a cap on "pain and suffering" of \$250,000.00;
- \* any punitive damages awarded will be directed to state health care budgets rather than the plaintiff;
- \* financial penalty--determined by the state and directed to state health care budgets--for attorneys who accept frivolous suits;
- \* fees awarded to attorneys will not exceed 20% of \$1 million awards, 10% of \$2 million awards, and 5% of awards of \$3 million or more.

Anti-trust laws will be relaxed to allow physicians and other providers to consult with one another regarding fees for services. This will allow them to be competitive among AHG's.

**SECTION FIVE**

**MEDICAL EDUCATION**

In order to assist physicians, nurses, and allied health professionals in reducing the debt incurred as a part of their education, and to provide care in necessary and often underserved areas, the

following methods of debt reduction will be allowed:

- \* referrals to affinity groups to help offset the cost of federally subsidized patients;
- \* service in public health or community clinics, secondary or post secondary institutions' health clinics, Native American reservations, and migrant centers;
- \* practice through interdisciplinary health care teams involving a network of professionals;
- \* lower interest loans, with stronger enforcement for repayment;
- \* paying back a smaller rate at the beginning of one's practice;
- \* erasure of 25% of one's debt for those who enter into underfilled medical disciplines.

A lottery selection for specialty training programs will maintain equal opportunity for all applicants. Selection into advanced training will be based only on ability and merit.

All providers will be required to keep current with medical advances by completing Continued Medical Education (CME) credits--the amount of which will be determined by the states' boards--in order to maintain licensure. Although licensure will be maintained at the state level, the federal government would mandate quality of practice, to include a national network for removal of licensure.

1  
2  
3  
4  
5 The regulatory bodies overseeing licensure will be made up of an  
6 interdisciplinary team. Thus, no one health discipline has control.

ONE HUNDRED THIRD CONGRESS

G.V. (SONNY) MONTGOMERY  
 CHAIRMAN

**U.S. House of Representatives**

COMMITTEE ON VETERANS' AFFAIRS

335 CANNON HOUSE OFFICE BUILDING

Washington, DC 20515

May 26, 1994

Honorable Richard Gephardt  
 Office of the Majority Leader  
 U. S. House of Representatives  
 Washington, DC 20515

Dear Mr. Leader:

As you begin to formulate a strategy for House consideration of H.R. 3600, I want to follow up on our discussions about Committee's plans for our portion of the bill. As I indicated to you, our Subcommittee on Hospitals and Health Care ordered the bill reported to the full Committee with amendments on May 11, 1994. Although I am not certain what will happen to the abortion restrictions when the full Committee takes up the bill, the rest of the amendments recommended by the Subcommittee seem to be non-controversial and have been endorsed by all of the veterans organizations.

There are very important budget and financing issues raised by H.R. 3600 as introduced, and since some of them affect not only our Committee but the Armed Services Committee as well as other committees with jurisdiction over the Indian Health Service, I want to make sure you are apprised of them. In my view, a favorable resolution of these issues is fundamental to meeting a commitment which the First Lady made in meetings with representatives of the major veterans organizations. Mrs. Clinton specifically told these organizations at a meeting that Senator Rockefeller and I attended that "all veterans will have the security of knowing that they are guaranteed a comprehensive package of benefits and access to the highest quality care" and the Health Security Act makes that promise to all Americans.

Obviously, neither the Budget Act as it is written today nor previous legislative precedent anticipates the potential huge shifts in budgeting and accounting for health care spending in this country. As CBO noted in its "Analysis of the Administration's Health Proposal":

*Two aspects of the Administration's health proposal have made its budgetary treatment particularly contentious. First, the proposal is innovative and complex, and existing budgetary*

Honorable Richard Gephardt  
May 26, 1994  
Page 2

*concepts and precedents are less helpful than usual. Second, the proposal does not spell out the requirements for financial reporting by the Federal government or the fiscal rules controlling the system of regional and corporate health alliances.*

While the budget issues presented by the entire bill are of far greater consequence than those presented by the portion of the bill dealing with veterans health care, it is not clear to me that Members will easily accept the changes necessitated by any universal health care legislation. I would like to propose three principles that would be helpful in assessing the changes in scorekeeping and accounting which adoption of legislation providing for universal health care coverage may require.

- The true effect on the deficit should be the focus of any budget analysis of health reform.
- Our assessment of health reform's effect on the deficit should focus on the long term impact (at least five years), not on the effect in any particular year.
- The distinction between mandatory and discretionary spending, and the consequences of those classifications, should not be a litmus test for health reform policy choices.

The proposed Health Security Act offers guaranteed health coverage to all Americans, including veterans and members of the armed forces and their families. Obviously, if funding support for health care for these Americans is subject to annual changes and curtailments (as it has been for veterans), there is no feasible way to insure that sufficient resources are available to provide the health care which persons who enroll with the VA are guaranteed. According to a preliminary assessment by the Congressional Budget Office, H.R. 3600 would have the effect of changing current spending for veterans' health care from discretionary to mandatory spending. CBO also expects that the resulting increase in direct spending would be completely offset by reduced discretionary spending. Overall, CBO concurs with the OMB estimate that the net effect of the veterans portion of H.R. 3600 would be billions of dollars in deficit reduction.

As I indicated in our discussions, the Subcommittee has reported amendments to H.R. 3600 which would establish a financing mechanism to assure funding for the care of service-connected and low-income veterans who choose VA as their health care provider. The Subcommittee also made other changes which reduce the savings from the level projected by CBO for the bill

Honorable Richard Gephardt  
May 26, 1994  
Page 3

as introduced. I believe these changes are sound, and the amended bill would still provide net savings of more than \$3.3 billion over fiscal years 1995-1999. However, savings of this magnitude may be substantially reduced by modifications to the bill now being discussed by other committees with jurisdiction over the entire bill. While I cannot predict the final savings associated with the veterans provisions, I am committed to assuring that the veterans portion does not add to the deficit over the first five years.

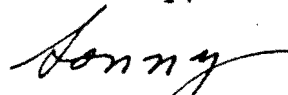

Mr. Leader, there are complicated choices ahead for all members on this bill. But we need to settle at the outset the proposition that if veterans choose to enroll with a VA plan, funding for their health care is secure and guaranteed, as it is for all other Americans under H.R. 3600. Inevitably, this means we cannot look to discretionary appropriations to fund services guaranteed under health reform legislation if VA is to have a chance to survive. VA must undergo a fundamental transformation to operate successfully in the marketplace, and it will have to make changes based on a clear notion of what future revenue it might expect as a ~~competitive health care provider~~.

I believe the choices and accompanying Budget Act changes will be far less controversial if we can agree on the three principles I have outlined above. However, if the change in accounting for veterans health care proposed in H.R. 3600 cannot be accommodated, I think veterans' support for the Administration's proposal or any other health reform legislation will evaporate.

~~My staff has kept the staff of the Budget Committee fully apprised of what is taking place in our Committee, and I want to make certain you are aware of what our Committee is doing on subtitle B of Title VIII of the bill, the portion dealing with health care for our nation's veterans.~~

I will schedule a full committee markup when the three major committees have reported a bill.

Sincerely,

G.V. (Sonny) Montgomery  
Chairman

GVM/per
