INTRODUCTION

The seventh comprehensive bottom trawl survey of the Aleutian Islands and southern Bering Sea region was completed during the summer of 2000 by the Resource Assessment and Conservation Engineering (RACE) Division of the Alaska Fisheries Science Center (AFSC), National Marine Fisheries Service (NMFS). The groundfish surveys are designed to describe and monitor the distribution, abundance, and biological condition of the important groundfish stocks in the Aleutian Islands area. Previous surveys in this series were conducted in 1980, 1983, 1986, 1991, 1994, and 1997. The purpose of this report is to provide pertinent catch information from the survey to the fishing industry.

Historically, the Aleutian Islands have been important fishing grounds for a variety of groundfish species including Pacific ocean perch, Atka mackerel, northern rockfish, walleye pollock, Pacific cod, Pacific halibut, sablefish, rockfishes, and several invertebrate groups including crabs and squid.

The Aleutian archipelago consists of 47 major islands extending westward in a 1,500 km arc from the Alaska Peninsula to

Attu Island. Prominent banks and reefs are located among the westernmost islands including Petrel Bank extending north from the middle of the chain at approximately 180°W long., Buldir and Tahoma Reef (176°E long.), and Stalemate Bank (170°E long.). Sea floor bathymetry of the Aleutian region reflects a volcanic origin characterized by irregular bottom, a narrow continental shelf, and a steep continental slope. The Aleutian Trench, lying approximately 120 km south of the chain and 4,000 - 7,000 m deep, defines the southern limit of the continental shelf and slope. The northern continental shelf and slope vary in width from 30 to 75 km and are bounded by Bowers Basin in the west and the Aleutian Basin in the east, both approximately 5,500 m deep.

METHODS

The survey was conducted aboard two chartered commercial trawlers, the FV *Vesteraalen* and the FV *Dominator* from 17 May to 25 July 2000. As this was the first government charter of the year for each of the two vessels, a cruise number of 2000-01 was assigned to the survey component of each vessel. The *Vesteraalen* and the *Dominator* completed 213 and 216 successful hauls, respectively. The survey area covered the southern Bering Sea from Unimak Pass (165°W long) to the Islands of Four Mountains

(170°W long.) and the Aleutian Islands from 170°W long. to Stalemate Bank (170°E long., Fig. 1).

Vessels and Gear Characteristics

Both vessels are house-forward trawlers equipped with stern ramps, two hydraulic net reels, an articulating hydraulic crane used for handling catches and gear and paired controlled-tension hydraulic trawl winches with 1,280-1,460 m of 2.54 cm diameter steel cable. Both vessels are 38 m in overall length and powered by single main engines with continuous horsepower ratings of 1,700 (*Vesteraalen*) and 2,000 (*Dominator*) and propeller nozzles. Both vessels employ global positioning systems (GPS) integrated with radar, computerized mapping, and steering controls for navigation. Other electronics essential to the survey include color video fish finders, paper recording depth sounders, VHF and single sideband radios and trawl warp measuring systems.

Both vessels used standard RACE Division Poly Nor'Eastern high-opening bottom trawls rigged with roller gear. See Section 4 for a detailed description and diagrams of gear.

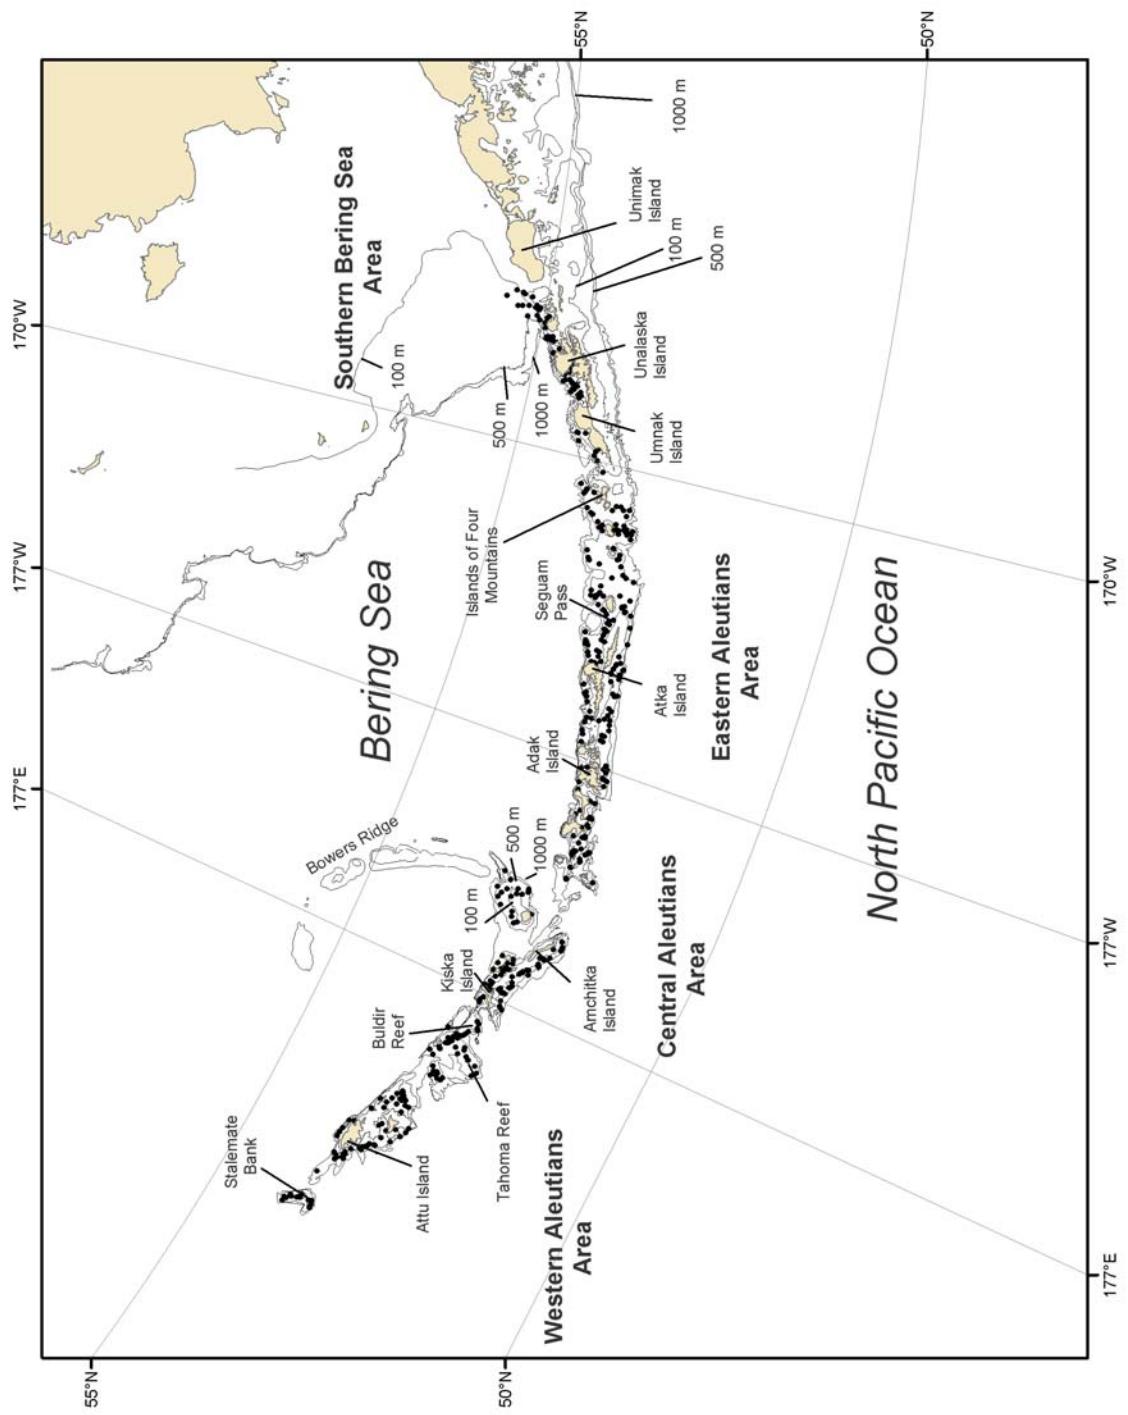

Figure 1.

Survey stations attempted during the 2000 NMFS biennial Aleutian Islands bottom trawl survey. Meridians shown define INPFC Management Area boundaries. Parallel lines shown are for reference only.

A SCANMAR¹ net mensuration system, consisting of net-mounted sensors acoustically linked to the vessel's data recording system, was used to monitor the net's wingtip opening and the distance between the headrope and footrope during trawling at most stations. After each haul was completed, data from a bottom contact sensor was downloaded and used to determine the actual time the trawl was on bottom. The trawl opening tended to increase horizontally and decrease vertically with increasing depth and wire paid out. The average net opening was 16.0 m wide and 7.0 m high. Duration of tows averaged 16 minutes, distance fished averaged 1.47 km, and towing speed averaged 5.5 km (3.0 nautical miles) per hour over the bottom.

Survey Design and Operations

For survey purposes, the Aleutian region was divided into four major sections based on geographic features and International North Pacific Fisheries Commission (INPFC) regulatory areas (Fig. 1). Those sections were further divided into 45 area-depth strata to a depth of 500 m as follows: 0-100,

¹Reference to trade names does not imply endorsement by the National Marine Fisheries Service, NOAA.

101-200, 201-300, and 301-500 m. A Neyman optimum allocation strategy drawing on data from previous surveys was used to develop a stratified random sampling distribution among the strata. Most tow locations were pre-selected, but to satisfy the sampling requirements some new and previously unsampled stations were added.

During survey operations, the first trawlable location encountered near the pre-selected station was sampled. In choosing the exact location, only the bottom conditions indicated by the echosounder were considered; the presence or absence of fish sign was ignored. The duration of the trawl sample at each station was intended to be 15 minutes. Shorter tows were made where towable bottom was scarce. Tows followed depth contours as closely as possible, maintaining a constant speed of 5.5 km/hr (3 knots). However, on some occasions tidal currents slowed tow speed somewhat.

Catches were sorted by species and the number and weight of each species was determined. Other biological data collected included individual length and weight measurements from representative samples of important species, age structures, sexual maturities and special collections of stomach, tissue, whole fish and invertebrates.

Water temperature and depth profile data were collected at each station using a Richard Branker XL-200 data logger attached to the net. Sea surface temperatures were also observed at each station using calibrated bucket thermometers.

RESULTS

Sampling proceeded from east to west at previously selected stations between 20 m to 622 m deep. Some strata were poorly sampled, due primarily to untrawlable bottom or presence of commercial fishing gear. Successful samples were obtained at 429 of the 457 stations attempted. These data provided the information used to estimate species distribution and abundance. Minimal survey time was lost to bad weather, strong currents and gear repair.

The dominant fish species are ranked by catch per unit effort (CPUE) in Table 1, expressed as kilograms of catch per hectare trawled (kg/ha) for the three Aleutian management areas and the Southern Bering Sea area and for the three Aleutian areas combined. Atka mackerel was the dominant species over the entire area (79.62 kg/ha) due mainly to very high CPUE in the Western and Central Aleutian areas (118.29 and 199.64 kg/ha,

respectively). Pacific ocean perch was either the first or second most abundant species in every management area, as well as overall. Its highest abundance was also in the western and central Aleutian areas (146.53 and 78.43 kg/ha, respectively). Pacific cod abundance declined progressively from 28.5 kg/ha in the Western Aleutian area to 12.24 kg/ha in the Southern Bering Sea. This trend was also observed for several rockfish species including northern, shortraker, and shortspine thornyhead. Walleye pollock was one of the few species that increased in abundance toward the east, ranging from 4.28 kg/ha in the Western Aleutian area to 30.02 kg/ha in the Southern Bering Sea.

Sea surface temperatures were collected at most survey stations and ranged from 3.7° to 8.5°C. Bottom temperatures sampled at 441 stations ranged from 3.0° to 5.4°C. The minimum and maximum surface and bottom temperatures were all lower than those that occurred during the 1997 survey by 0.2° to 1.9°C.

ORGANIZATION OF REPORT AND DATA STANDARDIZATION

This report focuses on the catch and effort data collected at individual stations and includes information for the principal species encountered during the survey. The results are presented in Section 1 for the FV *Vesteraalen* and Section 2 for the FV *Dominator*. Each section includes station charts with haul numbers plotted adjacent to their locations and listings of species catches by haul. Section 3 is a combined summary listing catch rates for selected commercially important species in descending order of magnitude. Standard survey hauls with catches are reported. Hauls without catches are summarized at the end of the catch listings. Explanations of the gear performance codes appearing in the fishing logs are summarized in Table 2.

Table 2. Performance codes used during the 2000 Aleutian Island Groundfish Survey.

Codes	Performance
0	Good performance
1	Satisfactory performance, hung up
1.1	Satisfactory performance, minor hang(s)
1.11	Satisfactory performance, completed tow
1.12	Satisfactory performance, hauled back early due to hang(s)
1.2	Satisfactory performance, major hang, stopped forward progress of vessel.
2	Satisfactory performance, unspecified gear damage
2.1	Satisfactory performance, wing damaged
2.4	Satisfactory performance, belly damaged
3.1	Satisfactory performance, caught pot, unspecified type
3.13	Satisfactory performance, Alaskan crab pot
4	Satisfactory performance, caught unspecified object
4.1	Satisfactory performance, caught large rock
4.4	Satisfactory performance, large fish catch affected net performance
4.5	Satisfactory performance, large invertebrate catch affected net performance
5	Satisfactory performance, unspecified gear performance problem
5.1	Satisfactory performance, net came off bottom
5.3	Satisfactory performance, weather affected trawl performance
5.4	Satisfactory performance, unspecified door problem
5.41	Satisfactory performance, door digging or falling over
5.5	Satisfactory performance, net crabbing severely
6.1	Satisfactory performance, depth change over tow exceeds survey defined limits
-1	Unsatisfactory performance, hung up
-1.12	Unsatisfactory performance, hauled back early due to hang(s)
-1.2	Unsatisfactory performance, major hang, stopped forward progress of vessel
-2.1	Unsatisfactory performance, wing damaged
-2.2	Unsatisfactory performance, breastline damaged
-2.4	Unsatisfactory performance, belly damaged
-4	Unsatisfactory performance, caught unspecified object
-5.1	Unsatisfactory performance, net came off bottom
-5.23	Unsatisfactory performance headrope/footrope tangled
-5.41	Unsatisfactory performance, door digging or falling over
-5.42	Unsatisfactory performance, doors crossed

Fishing Log for the FV *Dominator*

- Summary listings of species catches by haul
- Haul start/end latitude and longitude in degrees, minutes, and decimal minutes
- Bottom depth in meters
- Duration of tow in hundredths of an hour
- Distance fished in kilometers
- Catch weight in kilograms of principal species
- Total catch weight in kilograms of all species

The following haul had no catch:

Haul number	88
Start date & time	06/12/00 18
Start latitude	N 5157.88
Start longitude	W 17351.70
End latitude	N 5157.74
End longitude	W 17350.70
Gear depth (m)	81
Duration (minutes)	15.6
Distance fished (km)	1.197
Performance	-2.4

Section 3

Ranked Catch Per Unit Effort by Species or Species Group

- The summary listings of catch rates for selected species are presented as kilograms of catch per hectare (kg/ha) trawled.
- Average individual animal weight (kg) .
- Vessel codes (23 = Dominator and 94 = Vesteraalen)
- Average bottom depth is in meters

Principal species CPUE and average individual weight by vessel, haul, and depth during the NMFS 2000 biennial Aleutian Islands bottom trawl survey.

Section 4

Trawl and Accessories

Specifications and Diagrams

Specifications of the trawl, otter doors, and accessory gear used by the chartered trawlers *FV Dominator* and *FV Vesteraalen* during the 2002 bottom trawl survey of the Aleutian Islands region.

Equipment	Specifications
Netting - Polyethylene,	12.7 cm (5 in), 4 and 5 millimeter twine.
Headrope - 27.2 m (89 ft-1 in),	1.3 cm ($\frac{1}{2}$ in) (6 x 19) galvanized wire rope, wrapped with 1 cm (3/8 in) 3-strand polypropylene rope.
Footrope - 24.9 m (81 ft-7 in),	1 cm (3/8 in) (6 x 19) galvanized wire rope wrapped with polypropylene rope.
Fishing line - 24.3 m (79 ft-7 in),	shot-peened long-link chain. Safe working load 5.1 metric tons(t).
Roller gear - 24.2 m (79 ft-6 in),	1.9 cm (3/4 in) diameter, (6 x 19) galvanized wire rope strung through 10.2 cm (4 in) diameter rubber disks, 16 rubber wing bobbins 35.6 cm (14 in) in diameter and 34 galvanized rings hung with 30.5 cm (12 in) long dropper chain.

Breastlines - 1 cm (3/8 in) (6 x 19) galvanized wire rope wrapped with 1 cm polypropylene. Top corner 5.9 m (19ft-6 in); bottom corner 2.6 m (8 ft-8 in); top side panel 5.9 m; bottom side panel 9.3 m (30 ft-6 in).

Riblines - 1.9 cm (3/4 in) Samson 2 & 1 Duralon™. Top two 34.8 m (114.17 ft) and bottom two 31.8 m (104.45 ft), hung 98% of stretched seam length.

Flotation - Cycloc® trawl floats, 30.5 cm (12 in) diameter, 21 pieces. Buoyancy 10.2 kg (22.4 lb.) each and rated for 800 m (400 fm) depth.

Codend liner - Nylon, No. 18, 3.2 cm (1-1/4 in) stretched mesh (M), 315 M circumference and 200 M deep, laced to inner bag. When stretched the liner protrudes 61-91 cm (2 to 3 ft) beyond codend.

Restrictors - Polypropylene rope, 2.5 cm (1 in) diameter, 4.3 m (14 ft) circumference and secured loosely to codend at each ribline, 1.2 m (4 ft) apart, 5 pieces.

Splitting gear - 1.3 cm ($\frac{1}{2}$ in) diameter 6.4 m (21 ft) long galvanized wire rope is passed through four galvanized steel rings which are secured to the codend with 1.3 cm diameter braided nylon "spiders".

Side seams - Panels are joined to each other gathering 3 M (4 knots) from each panel. Panels that are secured to framing lines have a selvaged edge created by gathering 3 M.

Rigging - 3 dandylines each side, 1.6 cm (5/8 in) diameter galvanized wire rope, 54.9 m (30 fm) long.

Doors - 1.8 m x 2.7 m (6 x 9 ft), steel V-doors, approximately 800 kg (1,800 lb) each.

Chafing gear - Polypropylene 10 in M, 1 cm (3/8 in) polypropylene rope hog-ringed (or interwoven) together, 46 M circumference and 21 M deep, laced to outer bag 68.5 M up from the pucker rings.

Figure 14. Trawl and accessories diagrams

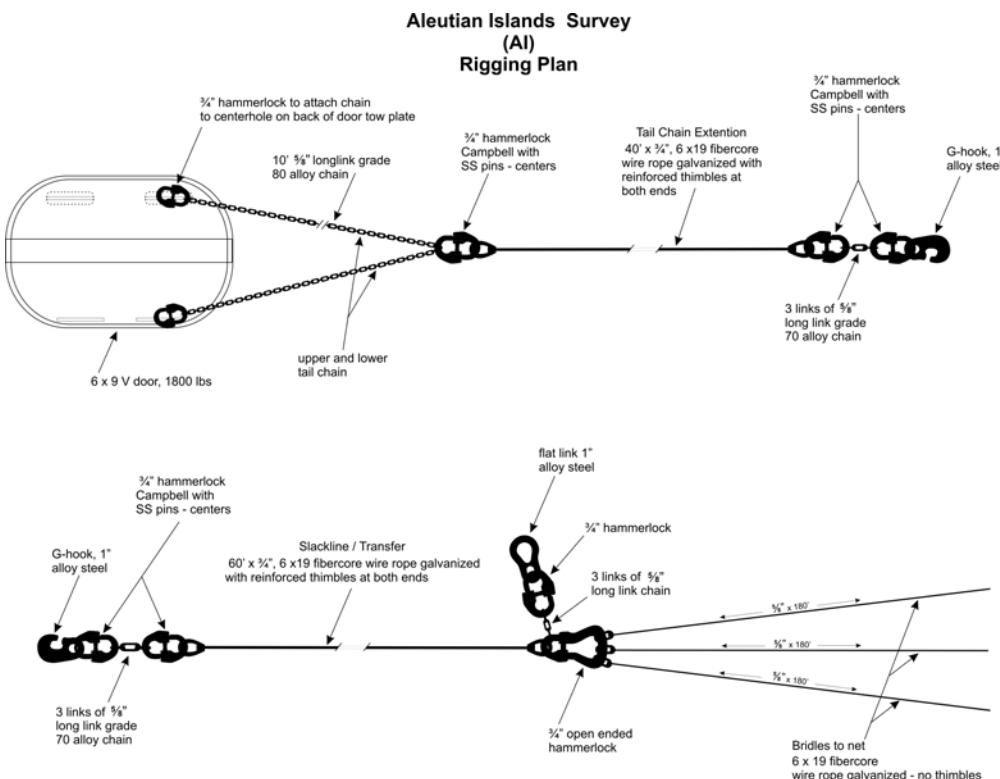

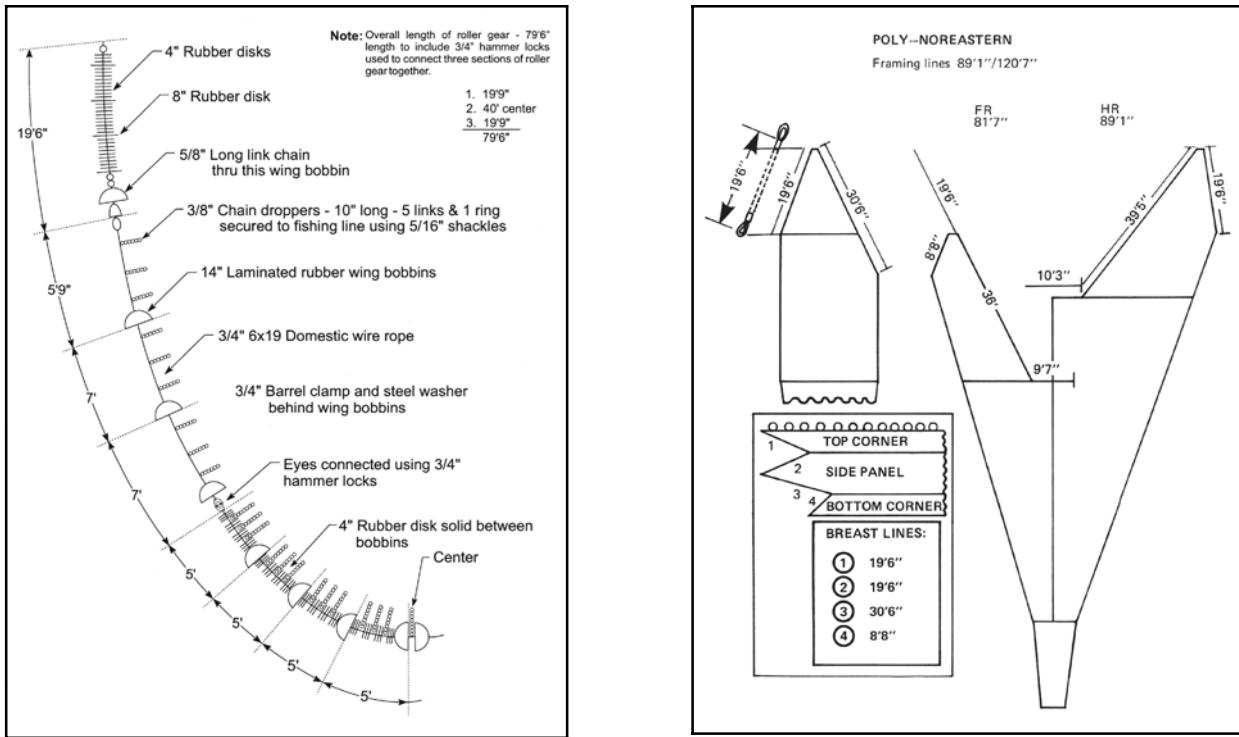

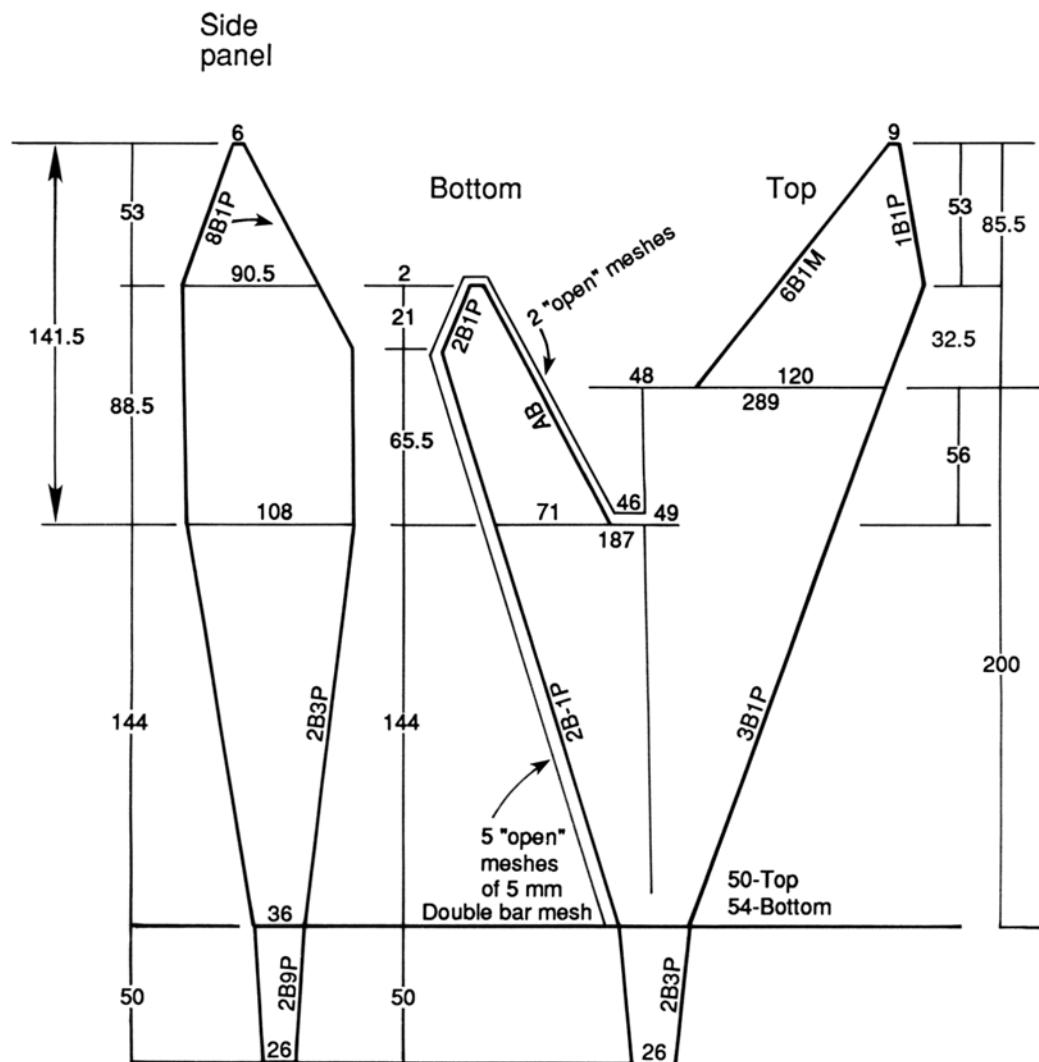

Figure 15. Poly Nor' Eastern Diagram

POLY-NOREASTERNA (Race)

Total mesh counts

Twine sizes: top and sides 4mm
bottom and intermediate 5mm

Web: Chaffing strip along inside of Bottom wings and Busom. Cut 8 meshes wide.
5 mm Double Bar mesh, goring 3 meshes on each side (leaving 2 open meshes).
Secure 3 mesh of gore on inside (Bar Cut) of Bottom wings, and securing other gore to footrope (Bolsh).
