

AFSC/ABL: Auke Bay Marine Station biological specimen reference collection (ABL Museum)

Theme keywords: 002, Biota, Collections records, vertebrates, invertebrates, algae

Abstract: This database is a collection of species identification for biological materials archived or recorded in the Auke Bay Marine Station Biological Specimen Reference Collections. Species are listed by scientific name (genus and species) according to the most recent editions of The American Fisheries Society List of Common and Scientific Names of Aquatic Invertebrates from the United States, Canada: Crustacea, List of Common and Scientific Names of Aquatic Invertebrates from the United States, Canada: Mollusks, List of Common and Scientific Names of Aquatic Invertebrates from the United States, Canada: Cnidaria and Ctenophore, List of Common and Scientific Names of Aquatic Invertebrates from the United States, Canada and Mexico or as obtained from the Integrated Taxonomic Information System, AFS check lists for Names of Mollusks (2nd Edition), AFS Names of Fishes (6th Edition). Collection data are the original field data taken from collection data sheets modeled after that of Hubbs, C.L., and K. F. Lagler, 1964. Fishes of the Great Lakes Region, University of Michigan Press, Ann Arbor, Michigan. Specimens and/or archived collection data extend back to 1941 and include extensive freshwater sampling by the Fish and Wildlife Service River Basins surveys, and Exploratory Fishing and Gear Research surveys prior to the establishment of Auke Bay Laboratory in 1960. These data are useful for documentation of species distributions (current and historical), habitat descriptions, and species associations.

FGDC, ESRI, and Biological Profile Metadata:

- [Identification Information](#)
- [Data Quality Information](#)
- [Entity and Attribute Information](#)
- [Distribution Information](#)
- [Metadata Reference Information](#)

Metadata elements shown with **blue** text are defined in the Federal Geographic Data Committee's (FGDC) [Content Standard for Digital Geospatial Metadata \(CSDGM\)](#). Elements shown with **green** text are defined in the [ESRI Profile of the CSDGM](#). Elements shown with **brown** text are defined in the [NBII Biological Profile of the CSDGM](#). Elements shown with a green asterisk (*) will be automatically updated by ArcCatalog. ArcCatalog adds hints indicating which FGDC elements are mandatory; these are shown with gray text.

ground condition

Status:**Progress:** In work

Maintenance and update frequency: As needed

Spatial domain:

Description of geographic extent:

The bounding coordinates given refernce the majoritiy of the species in the collection. The collection also contains specimens from: US (Washington, Oregon, California); Canada (Alberta, BC, Labrador, NW Territories, Ontario, Yukon); Antarctica; Mexico (Baja California); Japan, NW and S Atlantic Ocean; Russia; Western Bering Sea

Bounding coordinates:

West bounding coordinate: 179.95

East bounding coordinate: -121.58

North bounding coordinate: 71.65

South bounding coordinate: 49.2

Entity and Attribute Information:

Detailed description:

Entity type:

Entity type label: Collection_data

Entity type definition:
-no description-

Entity type definition source:

database developer

Attribute:

Attribute label: Acquisition_#

Attribute definition:

This is the primary key to collections and associated field data. This alpha-numeric number follows the following design: ABXX-YYz. AB = Auke Bay; XX = year of collection; YY = Sequential numbering; z = a or b if YY was used twice.

Attribute definition source:

database developer

Attribute domain values:

Unrepresentable domain:

No domain defined.

Attribute:

Attribute label: Original_#

Attribute definition:

This is the number assigned originally to the collection in the field by the collector(s). It will vary depending on the purpose or intent of the original program. In cases of some programs this may be designated as a Haul #, Set #, Trawl #.

Attribute definition source:

database developer

Attribute domain values:

Unrepresentable domain:

No domain defined.

Attribute:

Attribute label: Station_#

Attribute definition:

Station numbers refer to a specific geographic location which may be sampled repeatedly during a research program or over a number of years. Station numbers are most often associated with oceanographic programs.

Attribute definition source:

database developer

Attribute domain values:

Unrepresentable domain:

No domain defined.

Attribute:

Attribute label: State
Attribute definition:
Geographic State of collection
Attribute definition source:
database developer

Attribute domain values:
Unrepresentable domain:
No domain defined.

Attribute:

Attribute label: State/Country
Attribute definition:
In most cases this will be Alaska. It is often desirable to designate the Biogeographic region of Alaska. See Armstrong's Guide to Birds of Alaska (1990)
Attribute definition source:
database developer

Attribute domain values:
Unrepresentable domain:
No domain defined.

Attribute:

Attribute label: Region
Attribute definition:
Code for biogeographic region of collection within Alaska
Attribute definition source:
database developer

Attribute domain values:
Unrepresentable domain:
No domain defined.

Attribute:

Attribute label: Locality
Attribute definition:
Text for biogeographic region of collection within Alaska
Attribute definition source:
database developer

Attribute domain values:

Unrepresentable domain:

No domain defined.

Attribute:

Attribute label: Specific_locality

Attribute definition:

This is used to describe the locality in more detail than given in the locality column.

Attribute definition source:

database developer

Attribute domain values:**Unrepresentable domain:**

No domain defined.

Attribute:

Attribute label: Lat

Attribute definition:

Given in decimal degrees. Positive number is North, negative number is South.
