

AFSC/ABL:Coded-wire tag release database for NOAA Fisheries, Alaska

Theme keywords: Biota, 002, Coded-wire tags, coded wire tag, CWT, salmon, high seas, release

Abstract: Information on the releases of all CWT salmonids throughout the Pacific region is available in an on-line coastwide database, the Regional Mark Information System (RMIS). This database (see <http://www.psmfc.org/rmpc/index.html>) is maintained by the Regional Mark Processing Center (RMPC) of the Pacific States Marine Fisheries Commission (PSMFC) to facilitate exchange of CWT data between release agencies, sampling/recovery agencies, and other data users. NOAA Fisheries at Auke Bay Laboratories (ABL) is responsible for maintaining several different components of this coastwide CWT database including a complete list of release records for CWT salmonids released from Federally-funded research programs in Alaska.

FGDC, ESRI, and Biological Profile Metadata:

- [Identification Information](#)
- [Data Quality Information](#)
- [Distribution Information](#)
- [Metadata Reference Information](#)

Metadata elements shown with **blue** text are defined in the Federal Geographic Data Committee's (FGDC) [Content Standard for Digital Geospatial Metadata \(CSDGM\)](#). Elements shown with **green** text are defined in the [ESRI Profile of the CSDGM](#). Elements shown with **brown** text are defined in the [NBII Biological Profile of the CSDGM](#). Elements shown with a green asterisk (*) will be automatically updated by ArcCatalog. ArcCatalog adds hints indicating which FGDC elements are mandatory; these are shown with **gray** text.

Title:

AFSC/ABL: Coded-wire tag release database for NOAA Fisheries, Alaska

Publication date: Unknown

Geospatial data presentation form: database

Online linkage: <http://www.rmpec.org/external/rmis-standard-reporting.html>

Description:

Abstract:

Information on the releases of all CWT salmonids throughout the Pacific region is available in an on-line coastwide database, the Regional Mark Information System (RMIS). This database (see <http://www.psmfc.org/rmpc/index.html>) is maintained by the Regional Mark Processing Center (RMPC) of the Pacific States Marine Fisheries Commission (PSMFC) to facilitate exchange of CWT data between release agencies, sampling/recovery agencies, and other data users. NOAA Fisheries at Auke Bay Laboratories (ABL) is responsible for maintaining several different components of this coastwide CWT database including a complete list of release records for CWT salmonids released from Federally-funded research programs in Alaska.

Purpose:

To maintain a comprehensive database for coded-wire tag release information.

Time period of content:

Time period information:

Range of dates/times:

Beginning date: 1973

Ending date: 2009

Currentness reference:

publication date

Status:

Progress: In work

Maintenance and update frequency: Annually

Spatial domain:

Description of geographic extent:

North Pacific Ocean, Gulf of Alaska, and Bering Sea-Aleutian Islands

Bounding coordinates:

West bounding coordinate: -137

East bounding coordinate: -131

North bounding coordinate: 60

South bounding coordinate: 55

Taxon rank value: nerka
Applicable common names: sockeye
salmon

Taxonomic classification:
Taxon rank name: Species
Taxon rank value: tshawytscha
Applicable common names: king
salmon

Access constraints: There are no legal restrictions on access to the data. They reside in public domain and can be freely distributed.

Use constraints:

User must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of NOAA, as the source from which these data were obtained, in any publications and/or other representations of these data is suggested.

Data Quality Information:

Logical consistency report:

not applicable

Completeness report:

All cwts are blind read by 2 people during processing.

Lineage:

Methodology:

Methodology type:

Field

Methodology description:

Fish are collected, anaesthetized and measured; indicator fins are clipped; a Coded Wire Tag (CWT) is inserted into the snout of each fish. Before release of the fish to migrate in the ocean, representative samples of fish of each tag code lot are measured for length and weight and checked for tag retention. Pertinent release data are

recorded and entered into a database for each tag code lot.

Process step:

Process description:

See methodology for more details.

Process date: Unknown
