#### Second quarter of 2012

State personal income growth slowed to 1.0 percent in the second quarter of 2012 from 1.7 percent in the first quarter (chart 1). Growth slowed in 39 states and the District of Columbia, accelerated in 10 states, and was unchanged in Nevada. Personal income growth ranged from 2.1 percent in North Dakota to 0.4 percent in New Mexico. Inflation, as measured by the national price index for personal consumption expenditures, slowed to 0.2 percent in the second quarter from 0.6 percent in the first quarter.

The 1.0 percent second-quarter growth rate equals the average personal income growth rate since the recovery began 3 years ago in the second quarter of 2009. The inflation rate averaged 0.5 percent over the same period.

Chart 1. Range of State Personal Income Quarterly Growth Rates

David G. Lenze prepared the report on state personal income.

<sup>1.</sup> Personal income is the sum of net earnings by place of residence, property income, and personal current transfer receipts.

# **Quarterly State Personal Income**

#### Earnings by industry and state

Overall, earnings grew 0.8 percent in the second quarter of 2012 after growing 1.9 percent in the first quarter. Earnings increased in 21 of the 24 industries for which the Bureau of Economic Analysis (BEA) prepares quarterly estimates, with the largest percentage increase in the forestry, fishing, and related activities industry (table A).

Table A. Growth of U.S. Earnings by Industry

	Percent	Change	Dollar of	change of dollars)

Real estate and rental and leasing	-4.7	2.4	-7,960	3,886
Professional, scientific, and technical services	2.9	1.6	27,534	15,125
Management of companies and enterprises	2.3	1.5	5,283	3,507
Administrative and waste management services	2.8	1.2	10,649	4,762
Educational services	1.5	0.3	2,352	523
Health care and social assistance	1.7	0.9	17,917	9,373
Arts, entertainment, and recreation	2.9	0.2	3,096	259
Accommodation and food services	3.0	1.5	8,754	4,446
Other services, except public administration	1.4	0.9	5,003	3,170
Government	0.4	0.1	5,887	1,504
Federal, civilian	-0.2	-0.1	-819	-245
Military	0.4	-0.3	707	-535
State and local	0.5	0.2	5,999	2,283

Earnings grew 4.6 percent or \$1.44 billion in this industry, which consists mostly of agriculture and forestry support activities.<sup>2</sup> However, professional services pro-

vided the largest contribution to earnings growth in the second quarter, \$15.1 billion, and increased at a 1.6 percent pace. Growth in professional services was widespread across the country, with earnings growing at least 1.5 percent in 36 states.

Second-quarter earnings declined in three industries with the largest percentage decline, 1.8 percent, and largest dollar decline, \$2.0 billion, in farming (farm earnings grew 10.4 percent or \$10.5 billion in the first quarter). Civilian federal government and military earnings also fell in the second quarter.

Construction, nondurable-goods manufacturing, state and local government, and the military—the four industries with the weakest earnings growth during the current recovery—continued to lag other industries in the second quarter. Earnings in the construction industry grew 0.5 percent, nondurable goods manufacturing earnings grew 0.3 percent, state and local government earnings grew 0.2 percent, and military earnings fell 0.3 percent.

In addition, most of the growth in construction and nondurable-goods manufacturing industries was concentrated in just two or three states. Construction earnings grew \$1.54 billion (2.6 percent) in Texas and \$0.23 billion (2.5 percent) in Arizona in the second quarter, accounting for nearly two-thirds of the national \$2.75 billion gain. Most of the \$1.14 billion national gain in nondurable-goods manufacturing earnings was concentrated in Texas (\$0.28 billion), Illinois (\$0.20 billion), and Ohio (\$0.12 billion).

#### **Property income**

Property income (dividends, interest, and rent) grew 2.2 percent in the second quarter, up from 1.3 percent in the first quarter, and faster than earnings and personal current transfer receipts, the other major components of personal income.

<sup>2.</sup> Actually, the dominant component of this industry varies by state. For example, annual data for 2011 indicate that in Alaska and Massachusetts, fishing accounted for more than 75 percent of the earnings of forestry, fishing, and related industries. In Alabama, Georgia, and Oregon, the forestry share was more than 50 percent. In California and Florida, agriculture and forestry support activities earnings were more than 75 percent.

# **Quarterly State Personal Income**

#### **Transfer receipts**

Personal current transfer receipts increased 0.6 percent in the second quarter, down from 1.2 percent growth in the first quarter. Transfers grew more slowly than the rest of personal income in eight of the last nine quarters, even in the states with the slowest recoveries. In Nevada, transfers have grown 3.0 percent since the first quarter of 2010, compared with 9.0 percent growth in other components of income. In Arizona, transfers grew 5.1 percent, compared with 11.6 percent growth in other components. The only exceptions among states are Maine and Delaware. Transfers have grown 8.9 percent in Maine, 0.1 percentage point more than other components, and transfers have grown 11.2 percent in Delaware, compared with 10.5 percent for other components of personal income.

State unemployment insurance (UI) benefits fell 11 percent in the second quarter of 2012, the largest decline since they began falling 2 years ago. State UI benefits fell in every state except New York and West Virginia in the second quarter.

The net effect of the American Recovery and Reinvestment Act of 2009 (ARRA) on transfer receipts was \$9.5 billion in the second quarter, unchanged from the first quarter, but down 78 percent from a year ago (table B).

ARRA American Recovery and Reinvestment Act of 2009

1. Some ARRA funding, such as Medicaid, replaced state funding and had no effect on personal current transfer

As is customary in September, BEA released several sets of detailed statistics for the previous year: tax payments by level of government; transfer receipts by major program; detailed farm income and expenses; and wages, compensation, and earnings for three-digit North American Industry Classification System (NAICS) industries. The new estimates are based on surveys and tabulations of administrative data; they replace previously reported estimates of total taxes, total transfers, and total farm proprietors' income that relied on extrapolations of past trends.

#### Tax payments by level of government

Personal current taxes (which consist of federal, state, and local income taxes; personal property taxes; and motor vehicle licenses) rose \$203 billion (17 percent) in 2011 after rising \$50 billion (4.4 percent) in 2010. Even so, personal current taxes in 2011 were \$91 billion lower than in 2007. Tax payments rose in every state; the largest increase—34 percent—was in North Dakota, while the smallest increase—14.0 percent—was in Maryland.

Payments of federal income taxes accounted for 77 percent of personal current taxes in 2011 and rose in every state. In contrast, payments of federal income taxes fell in 2010 in Delaware (0.3 percent), Hawaii (7.2 percent), Nevada (1.8 percent), and New Mexico (8.6 percent), and were unchanged in Utah.

State income taxes also rose in 2011 in the 43 states that levy such taxes; the average increase was 9.1 percent (table C). In 2010, state income taxes rose an average 7.3 percent in 17 states and fell an average 2.9 percent in 26 states. State income taxes remained below the levels reached in 2007 or 2008 in 36 states.

After deducting personal current taxes from personal income, the remainder is disposable personal income. Disposable personal income grew 3.9 percent in 2011, up slightly from the 3.8 percent growth in 2010. From their disposable personal income, persons pay nonmortgage interest and make transfers (such as the remittances im-

migrants make to their families in their countries of origin); the rest is available for consuming or saving.<sup>2</sup>

Some insight into the nature of disposable personal income growth can be gained by separating the contributions of inflation and population growth from the growth of real per capita disposable personal income

<sup>\*</sup> Does not levy a state income tax.

<sup>1.</sup> The seven states that do not levy personal income taxes are Alaska, Florida, Nevada, South Dakota, Texas, Washington, and Wyoming.

<sup>2.</sup> Mortgage interest and property taxes are deducted in the calculation of rental income of persons, a component of personal income. Sales taxes are included in personal consumption expenditures.

(chart 2). Inflation accelerated to 2.4 percent in 2011, up from 1.9 percent in 2010. Population growth slowed to 0.7 percent in 2011 from 0.8 percent in 2010, the slowest pace since the end of World War II. Real per capita disposable income grew 0.7 percent in 2011, down from 1.0 percent in 2010.

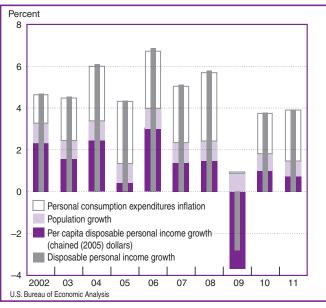

Population growth rates varied markedly across states. Michigan and Rhode Island lost population in 2011, while population grew 1.7 percent in Texas, more than double the national pace. In 2011, per capita disposable personal income growth ranged from 11.3 percent in South Dakota to 2.1 percent in Nevada.

#### Transfer receipts by major program

Personal current transfer receipts grew in 2011, but at a slower pace than in 2010 in all states except Maine, where transfer receipt growth accelerated, and in Illinois, Montana, and Wisconsin, where transfer receipts fell. Nationally, transfers grew \$35 billion in 2011, after increasing \$144 billion in 2010.

A decline in medical benefits accounted for most of the decline in total transfers in Illinois, Montana, and Wisconsin. Much of the slowdown in total transfers in the others states can be attributed to a decline in unem-

**Chart 2. Composition of Disposable Personal Income** Growth in the United States

ployment insurance compensation and a decline in transfers funded by the ARRA (table D).3

#### **Detailed farm income and expenses**

Net farm income increased \$38 billion (57 percent) in 2011 to a record-high level. The \$17 billion (35 percent) increase in 2010 also brought net farm income to a record-high level (table E). Farm production increased \$61 billion, of which \$28 billion was livestock production and \$33 billion was crop production. At the same time, government payments to farmers fell nearly \$2 billion to \$10 billion, the lowest level since 1997. The corporate share of net farm income rose to 26 percent, the highest level in the series, which begins in 1969.4

More than half of the gain in net farm income was generated in just five states, Iowa (\$6.0 billion), California (\$5.2 billion), Nebraska (\$3.5 billion), South Dakota (\$2.9 billion), and Illinois (\$2.7 billion). Among these

## **Earnings for three-digit NAICS industries**

BEA publishes statistics for two-digit NAICS sectors at a quarterly frequency and for three-digit subsectors annually (tables A and G (see page 101)). The high level of aggregation in the quarterly statistics obscures important aspects of industry composition that distinguish states from each other. This is illustrated by the recent trajectory of quarterly earnings in the accommodation and food services sector (chart 3, left panel).

In Nevada, this sector (which includes casino hotels) was especially vulnerable to the recent recession; earnings fell almost 22 percent from the third quarter of 2007 (one quarter before the business cycle peak) to the third quarter of 2009 (one quarter after the trough of the business cycle). In the other states, the decline was milder and briefer; earnings fell only 8.4 percent from the fourth quarter of 2007 to the first quarter of 2009. Once the sector began recovering, however, the pace of recovery was quicker in Nevada than in the other states. From the third quarter of 2009 to the second quarter of 2011, earnings grew 14 percent in Nevada and 10 percent in the other states. For the last four quarters, however, there has been little growth (0.6 percent) in this sector in Nevada, but in the others states, earnings have grown nearly 7 percent.

The annual data reveal several things. First, the food services and drinking places subsector was much less affected by the recession than the accommodation subsector (chart 3, right panel). Earnings fell a relatively small amount in 2009 and subsequently rebounded. The rebound was much stronger in Nevada (up 13 percent since 2007) than elsewhere (up 9 percent). Second, the recession reduced earnings in the accommodation subsector in the rest of the country almost as much as in

Chart 3. Quarterly and Annual Earnings in Accommodations and Food Service in Nevada and All Other States

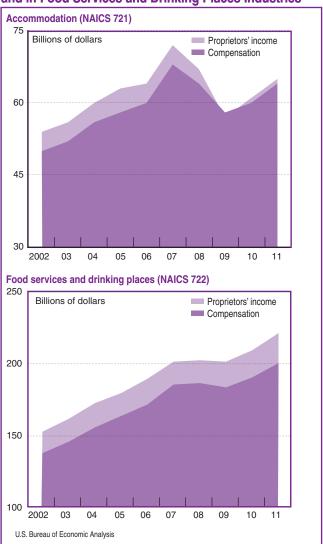

Nevada. Furthermore, 2011 earnings in the accommodation subsector remain below the 2007 level in both Nevada and the other states as a group.<sup>5</sup>

In states other than Nevada, the food services subsector is substantially larger than the accommodation subsector. Excluding Nevada, earnings in food services in 2011 were \$218 billion, nearly four times larger than earnings in accommodations (\$55 billion). In contrast, in Nevada, the accommodation subsector was more than three times larger than the food services subsector.

The recession markedly changed the composition of earnings in the accommodation industry, but it had little effect on the composition of earnings in food services. For 2001–2006, proprietors' income averaged 7.2 percent of earnings in accommodations nationally and 9.6 percent of earnings in food services. In 2011, the share of proprietors' income fell to 1.3 percent of earnings in accommodations, but was little changed in food services (chart 4).

Chart 4. Composition of Earnings in Accommodation and in Food Services and Drinking Places Industries

<sup>5.</sup> Unlike most other states, New York's accommodation subsector—the largest in the nation after Nevada, California, and Florida—has grown rapidly in 2010 and 2011 and is now 8 percent above its 2007 level.

<sup>6.</sup> Proprietors' income includes the profits of unincorporated businesses (sole proprietorships and partnerships owned by persons).

#### **Revisions to Annual State Personal Income**

BEA has revised its quarterly and annual state personal income statistics, beginning with the first quarter of 2009. Each September, BEA typically revises the preliminary estimates released in March in order to incorporate the results of the annual revision of the national income and product accounts (NIPAs) and to incorporate state source data that are more complete and more detailed than those previously available (see table H on page 103).<sup>1</sup>

The NIPA estimate of U.S. personal income for 2011, which controls the state estimates, was revised down 0.3 percent (\$44 billion). Personal dividend income was revised the most (it was revised down \$116 billion) and more than accounted for the total revision to personal income. Proprietors' income was revised up \$48 billion.

The unweighted average revision to 2011 personal income in the 50 states and the District of Columbia was less than one-tenth percent (table I). Upward revisions in some states were exactly offset by downward revisions to other states and the District of Columbia. The average absolute revision was 1.0 percent, and the dispersion of the revisions (or standard deviation) was 1.5 percent.

The largest upward revisions in 2011 were for South Dakota (6.3 percent) and North Dakota (3.3 percent). Most of the revisions (5.4 percentage points in the case of South Dakota and 3.1 percentage points in the case of North Dakota) were accounted for by a revision to farm proprietors' income due to the incorporation of new gross income and expense data from the U.S. Department of Agriculture. The largest downward revision in 2011 was for Nevada (3.2 percent). Most of this revision (2.6 percentage points) arose from the introduction of new source data from the Internal Revenue Service for dividends, interest, and rent reported on 2010 income tax returns.

Table I. Revisions to Personal Income by State and District of Columbia, 2009–2011

#### Personal Income in the NIPAs and State Personal Income

The level of personal income in the NIPAs differs from the national total in the state personal income statistics because of differences in coverage and timing of the availability of source data.

The differences in coverage stem from different concepts of residence. For NIPA personal income, a U.S. resident has a center of economic interest in the country and resides, or expects to reside, in the country for a year or more. For state personal income, a resident is a participant in a U.S. regional economy, regardless of the individual's national citizenship or duration of residence.<sup>1</sup>

In general, the NIPA measure of personal income is broader than state personal income. Some key coverage differences are:

- NIPA personal income includes the earnings of federal civilian and military personnel stationed abroad and the property income received by the federal retirement plans of these workers. The regional measure of personal income does not include this income.<sup>2</sup>
- NIPA personal income includes all income earned by U.S. citizens living abroad for less than a year. State personal income excludes the portion earned while an individual lives abroad.
- NIPA personal income includes the income of foreign nationals only if they live and work in the United States for a year or more. State personal income includes the income of resident foreign nationals working in the United States-including migrant workers—regardless of length or residency.

The annual estimates of personal income in the NIPAs also diverge from the national totals of state personal income because of differences in the timing of the availability of source data. For example, farm proprietors' income in the NIPAs for 2011 was \$23.3 billion lower than in state personal income because the state estimates of farm proprietors' income incorporated revised U.S. Department of Agriculture data that were not available until after the national estimate was released.

Both NIPA and state personal income include the income of U.S. residents employed by international organizations or by other countries while living in the United States and exclude the income of foreign nationals employed by their home governments. NIPA personal income also includes the income of foreign nationals working at international organizations in the United States.<sup>3</sup> In addition, both measures exclude the income of private U.S. citizens living outside the country for a year or more.

Table J. State and National Estimates of Personal Income [Billions of dollars]

	2009	2010	2011
Personal income in the NIPAs	11,867.0	12,321.9	12,947.3
Plus adjustments for:			
Coverage differences	-20.0	-21.9	-23.3
Federal workers abroad	-24.9	-26.8	-28.5
Wage and salary disbursements	-16.1	-17.0	-17.4
Supplements to wages and salaries 1	-9.7	-10.6	-11.3
Dividends, interest, and rent <sup>2</sup>	-0.7	-0.9	-1.3
Less: Contributions for government social insurance	-1.6	-1.7	-1.5
Rest-of-the-world difference	4.9	4.9	5.2
Wages of private foreign nationals in U.S	5.9	6.0	6.3
Wages of private U.S. residents abroad	-1.0	-1.1	-1.1
Use of more current source data	2.8	6.3	23.2
Wage and salary disbursements	-0.1	-0.1	-0.1
Proprietors' income	2.9	6.4	23.3
Personal current transfer receipts	<0.1	<0.1	<0.1
Statistical discrepancy <sup>3</sup>	2.9	2.2	2.7
Equals: State personal income	11,852.7	12,308.5	12,949.9

<sup>1.</sup> See State Personal Income and Employment at www.bea.gov/regional/ methods.cfm.

<sup>2.</sup> For a description of military coverage in state personal income, see "New Treatment of State Estimates of Military Compensation," SURVEY 85 (October 2005): 116.

<sup>3.</sup> For more information on the treatment of border workers in the residence adjustment, see State Personal Income and Employment.

Employer contributions for government social insurance and for employee pension and insurance funds for Federal workers stationed abroad.
 Investment income received by Federal retirement plans that is attributed to Federal workers stationed abroad.
 Includes revisions made in the NIPAs that are not yet reflected in state personal income concerning wages of border workers and foreign nationals working for international organizations.

## **Data Availability**

The complete set of quarterly and annual state personal income and employment statistics for all states and the District of Columbia and for all years are available interactively on BEA's Web site.

The following annual estimates are available at www.bea.gov/iTable/index\_regional.cfm:

- Personal income, per capita personal income, and population for 1929–2011
- Disposable personal income and per capita disposable personal income for 1948–2011
- State income and employment summary, 1929–2011
- Personal income by major source and earnings by industry (North American Industry Classification System (NAICS) three digit) for 1990–2011, (Standard Industrial Classification System (SIC) two digit) for 1958–2000, and (SIC division level) for 1929–57, and 2001
- Compensation of employees by industry (NAICS three digit) for 1990–2011 and (SIC two digit) for 1958–2000, and (SIC division level) for 2001
- Wage and salary disbursements by industry (NAICS three digit) for 1990–2011, (SIC two digit) for 1958–2000, and (SIC division level) for 1929–57, and 2001
- Full-time and part-time employment by industry (NAICS three digit) for 1990–2011, (SIC two digit) for 1969–2000, and (SIC division level) for 2001
- Full-time and part-time wage and salary employment by industry (NAICS three digit) for 1990–2011, (SIC two digit) for 1969–2000, and (SIC division level) for 2001
- State economic profiles (a selection of personal income and employment data for each state) for 1958–2011
- Personal current transfer receipts by major program for 1948–2011
- State property income for 1958–2011
- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and for measures of farm income) for 1969–2011
- Personal current tax receipts by level of government

- and by type for 1948–2011
- BEARFACTS, a computer generated narrative with analytical charts and graphs, that describes a state's personal income using current estimates, growth rates, and a breakdown of the sources of personal income

The following quarterly estimates are available at www.bea.gov/iTable/index\_regional.cfm:

- Personal income for the first quarter of 1948 to the second quarter of 2012
- Quarterly income summary for the first quarter of 1948 to the second quarter of 2012
- Personal income by major source and earnings by major industry (NAICS two digit) for the first quarter of 1990 to the second quarter of 2012
- Personal income by major source and earnings by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001

- Wage and salary disbursements by major industry (NAICS two digit) for the first quarter of 1990 to the second quarter of 2012
- Wage and salary disbursements by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001

The state personal income statistics are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA disseminate the statistics in their states. For a list of the BEA User Group on BEA's Web site, go to www.bea.gov/regional/docs/usergrp.cfm.

For more information about the statistics, contact the Regional Income Division at 202–606–5360, fax 202–606–5322, or e-mail reis@bea.gov.

## **Acknowledgments**

The annual revision of state personal income was prepared by the Regional Income Division under the direction of Sharon C. Carnevale, Mauricio Ortiz, John A. Rusinko, and James M. Zavrel. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a division-wide effort.

The estimates of nonfarm wages and salaries and supplements to wages and salaries were prepared by the Compensation Branch under the supervision of John A. Rusinko, Chief. Major responsibilities were assigned to Peter Battikha, Michael L. Berry, Elizabeth P. Cologer, John D. Laffman, and Nathan D. Patterson. Contributing staff members were Susan P. Den Herder, Terence J. Fallon, Michael W. Jadoo, Russell C. Lusher, Paul K. Medzerian, Nathaniel R. Milhous, Michael A. Reid, and Ross A. Stepp.

The quarterly estimates of state personal income and the annual estimates of nonfarm proprietors' income, property income, personal current transfer receipts, contributions for government social insurance, the adjustment for residence, and personal current tax receipts were prepared by the Regional Income Branch under the supervision of Mauricio Ortiz, Chief. Major responsibilities were assigned to Brian J. Maisano, Lisa C. Ninomiya, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Nacola A. Alexander, Suet M. Boudhraa, Andy K. Kim, Enrique B. Lopez, Toan A. Ly, W. Timothy McKeel, Linda M. Morey, Anand N. Seeram, Joseph L. Stauffer, and Troy P. Watson.

The estimates of farm wages and salaries, farm supplements to wages and salaries, and farm proprietors' income were prepared by the Farm Income and Employment Section under the supervision of James M. Zavrel, Assistant to the Division Chief. Major responsibilities were assigned to Carrie L. Litkowski. Contributing staff members were Daniel R. Corrin and Michelle A. Harder.

The public use tabulations and data files were assembled and the tables were prepared by the Data and Administrative Systems Group. Major responsibilities were assigned to Jeffrey L. Newman, Michael J. Paris, and Callan S. Swenson. Contributing staff members were Brooke N. Huotari, Monique B. Tyes, Melanie N. Vejdani, and Jonas D. Wilson.
