# Report on VA Facility Specific Operation Enduring Freedom (OEF), Operation Iraqi Freedom (OIF), and Operation New Dawn (OND) Veterans Coded with Potential PTSD

*Cumulative from 1st Qtr FY 2002 through 4th Qtr FY 2011 (October 1, 2001 – September 30, 2011)*

## Table of Contents

# Introduction

This quarterly report presents numbers on Operation Enduring Freedom (OEF), Operation Iraqi Freedom (OIF), and Operation New Dawn (OND) Veterans who utilized various Department of Veterans Affairs (VA) medical facilities. This report shows the number and distribution of Veterans with potential (or provisional diagnosis of) Post-traumatic stress disorder (PTSD) by VA Medical Center (VAMC), Veterans Integrated Service Network (VISN), and Vet Center.

Check http://www.publichealth.va.gov/epidemiology for updates.

# Background

This report is provided in response to a Government Accountability Office (GAO) request that VA enumerate the total number of OEF, OIF, and OND Veterans who were diagnosed with PTSD, by VISN and specific VAMC using VA inpatient and outpatient records. It was also requested that this information be aggregated with Vet Center utilization data. The Veterans Health Administration (VHA) prepared an initial report in October 2004 for health care utilization during FY 2004 (October 1, 2003-September 30, 2004). This current report covers VA health care data for FY 2002 through 4th Qtr FY 2011 (October 1, 2001 – September 30, 2011).

# Data Sources

## OEF/OIF/OND Veteran Roster

Since October 2003, the Department of Defense (DoD) Defense Manpower Data Center (DMDC) has sent the VA, Office of Public Health, Post Deployment Health Strategic Healthcare Group, Epidemiology Program (EP), a periodically updated personnel roster of troops who participated in OEF/OIF/OND and who had separated from active duty and became eligible for VA benefits. The roster was originally prepared based on the pay records of individuals but more recently has been based on a combination of pay records and operational records provided by each branch of service. Based on the latest DMDC file received on October 4, 2011, there are a total of 1,396,477 unique OEF/OIF/OND Veterans (including 5,584 Veterans who died in-theater) who, as of August 2011, have separated from active duty following a deployment. For each Veteran, his/her demographic (social security number, name, date of birth, gender, education, etc.) and military service specific data (branch, rank, unit component, deployment dates, etc.) were included in the record.  Beginning in 3rd Qtr FY 2009 (April 1, 2009- June 30, 2009), Veterans who died in-theater are included in both the DMDC total roster and health care utilization frequencies because this is a cumulative report going back to 2002, and, due to the duration of the OEF/OIF/OND conflict and repeated deployments, a certain number of these Veterans may have accessed VA health care services for the evaluation and/or treatment of PTSD.

## VHA Health Care Utilization Records

The roster was checked against VA's inpatient (PTF) and outpatient (OPC) electronic patient records available through September 30, 2011 to identify those who had sought treatment in VA facilities and to identify the International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM) diagnostic codes used to describe the visits. These are administrative data and are not based on a review of each patient record. For the purpose of this report, a search was conducted of individual health care utilization records during FY 2002 -4th Qtr FY 2011 following first deployments in Iraq or Afghanistan. For identification of a potential PTSD patient, we used ICD-9CM, 309.81.

The Vet Center counts were based on the data provided to EP on November 2, 2011 by the Readjustment Counseling Service (RCS). The RCS staff matched the same DMDC roster with Vet Center users' records through 4th Qtr FY 2011.

# Distribution of Veterans by Diagnostic Code and Facility

- A Veteran is counted only once in any facility specific category. For example, a Veteran who received health care from two or more medical centers within the same VISN was counted once for that VISN. Likewise, a Veteran who used services across two or more VISN facilities and a Vet Center was counted only once for the national overall total.

- The number for "Primary" indicates the total number of unique Veterans whose primary reason for the inpatient or outpatient visit was for treatment or evaluation of PTSD.

- The number for "Any" indicates the total number of unique Veterans coded with PTSD, whether or not the primary reasons for the inpatient or outpatient visit was for treatment or evaluation of PTSD.

- Both "Primary" and "Any" categories may include a preliminary diagnosis.

# Summary

A query of VHA health care utilization databases using the August 2011 DMDC roster yielded a total of 207,161 OEF/OIF/OND Veterans coded with PTSD at a VAMC and 45,898 Veterans who received Vet Center service for PTSD. Of these, 177,711 were seen only at a VAMC; 16,448 only at a Vet Center; and 29,450 were seen at both facilities. In summary, based on the electronic patient records available through September 30, 2011, a grand total of 223,609 OEF/OIF Veterans were seen for potential PTSD at VHA facilities following their return from Iraq or Afghanistan.

# OEF/OIF/OND Veterans with Potential PTSD Using VA Facilities

## Table 1: Number and Distribution of Unique OEF/OIF/OND Veterans with Potential PTSD Utilizing VA Facilities during FY 2002-4th Qtr FY 2011

[1] The "total patient" counts were generated by matching a cumulative roster of 1,396,477 unique OEF/OIF/OND Veterans who had been separated from active duty as of August 2011, with VA PTF and OPC databases for FY 2002 through 4th Qtr FY 2011. The DoD DMDC identified and provided the identity of these Veterans to the VA EP on October 4, 2011.

[2] The number for "Primary" indicates the total number of unique Veterans whose primary reason for the inpatient or outpatient visit was for treatment or evaluation of PTSD.

[3] The number for "Any" indicates the total number of unique Veterans with PTSD whether or not the primary reasons for the inpatient or outpatient visit was for treatment or evaluation of PTSD.

[4] The Vet Center counts were based on matching the DMDC OEF/OIF/OND roster with Vet Center users' records through 4th Qtr FY 2011.

[5] The number for "Grand Total" (n= 223,609) indicates the sum of "Any Total Patients" (n=207,161) and "Vet Center PTSD" (n=45,898) after excluding duplicates (n=29,450).
