Table of OEF/OIF/OND Veterans with Potential PTSD Using VA Facilities	4

Introduction

This quarterly report on Veterans who have used Department of Veterans Affairs (VA) health care and who served in Operation Enduring Freedom (OEF), Operation Iraqi Freedom (OIF), or Operation New Dawn (OND), shows the number and distribution of these Veterans diagnosed with a potential or provisional diagnosis of Post-Traumatic Stress Disorder (PTSD). This report includes only those Veterans diagnosed at a VA medical center (VAMC), Veterans Integrated Service Network (VISN), or Vet Center. This report is created by linking the Department of Defense (DoD) roster of returning Veterans to VA's electronic inpatient and outpatient health records and Vet Center records.

Background

This report is provided in response to a Government Accountability Office (GAO) request that VA enumerate the total number of OEF, OIF, and OND Veterans who were diagnosed with PTSD by VISN and specific VAMC using VA inpatient and outpatient records. It was also requested that this information be aggregated with Vet Center utilization data. The Veterans Health Administration (VHA) prepared an initial report in October 2004 for health care utilization during FY 2004 (October 1, 2003-September 30, 2004). This current report covers VA health care data for FY 2002 through 4th Qtr FY 2012 (October 1, 2001 – September 30, 2012).

Data Sources

OEF/OIF/OND Veteran Roster

Since October 2003, the Department of Defense (DoD) Defense Manpower Data Center (DMDC) has sent the VA, Office of Public Health, Post-Deployment Health Group, Epidemiology Program (EP), a periodically updated personnel roster of troops who participated in OEF/OIF/OND and who had separated from active duty and became eligible for VA benefits. The roster was originally prepared based on the pay records of individuals but more recently has been based on a combination of pay records and operational records provided by each branch of service. Based on the latest DMDC file received on October 31, 2012, there are a total of 1,557,026 unique OEF/OIF/OND Veterans (including 5,752 Veterans who died in-theater) who, as of August 2012, have separated from active duty following a deployment. For each Veteran, their demographic (social security number, name, date of birth, gender, education, etc.) and military service specific data (branch, rank, unit component, deployment dates, etc.) were included in the record. Beginning in 3rd Qtr FY 2009 (April 1, 2009- June 30, 2009), Veterans who died in-theater are included in both the DMDC total roster and health care utilization frequencies because this is a cumulative report going back to 2002, and, due to the duration of the OEF/OIF/OND conflict and repeated deployments, a certain number of these Veterans may have accessed VA health care services for the evaluation and/or treatment of PTSD.

VHA Health Care Utilization Records

The roster was checked against VA's inpatient (PTF) and outpatient (OPC) electronic patient records available through September 30, 2012 to identify those who had sought treatment in VA facilities and to identify the International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM) diagnostic codes used to describe the visits. These are administrative data and are not based on a review of each patient record. For the purpose of this report, a search was conducted of individual health care utilization records during FY 2002 -4th Qtr FY 2012 following first deployments in Iraq or Afghanistan. For identification of a potential PTSD patient, we used ICD-9-CM, 309.81.

The Vet Center counts were based on the data provided to EP on December 11, 2012 by the Readjustment Counseling Service (RCS). The RCS staff matched the same DMDC roster with Vet Center users' records through 4th Qtr FY 2012. The Epidemiology Program does not make any modifications to the data provided by RCS.

Distribution of Veterans by Diagnostic Code and Facility

- A Veteran is counted only once in any facility specific category. For example, a Veteran who received health care from two or more medical centers within the same VISN was counted once for that VISN. Likewise, a Veteran who used services across two or more VISN facilities and a Vet Center was counted only once for the national overall total.
- The number for “Primary” indicates the total number of unique Veterans whose primary reason for the inpatient or outpatient visit was for treatment or evaluation of PTSD.
- The number for “Any” indicates the total number of unique Veterans coded with PTSD, whether or not the primary reasons for the inpatient or outpatient visit was for treatment or evaluation of PTSD.
- Both “Primary” and “Any” categories may include a preliminary diagnosis.

Summary

A query of VHA health care utilization databases using the August 2012 DMDC roster yielded a total of 250,242 OEF/OIF/OND Veterans coded with PTSD at a VAMC and 66,730 Veterans who received Vet Center service for PTSD. Of these, 206,621 were seen only at a VAMC; 23,109 only at a Vet Center; and 43,621 were seen at both facilities. In summary, based on the electronic patient records available through September 30, 2012, a grand total of 273,351 OEF/OIF/OND Veterans were seen for potential PTSD at VHA facilities following their return from Iraq or Afghanistan. Please note that the number of PTSD cases reported by the RCS for 4th Qtr FY 2012 shows a greater than expected increase over the number for 3rd Qtr FY 2012. RCS revised its method of enumeration to account more accurately for individuals who initially encountered RCS for Outreach or Other Issues and were subsequently coded for probable or possible PTSD.

OEF/OIF/OND Veterans with Potential PTSD Using VA Facilities

¹ To protect the privacy of Veterans, frequencies of fewer than 10 individuals are not reported.

² The “total patient” counts were generated by matching a cumulative roster of 1,557,026 unique OEF/OIF/OND Veterans who had been separated from active duty as of August 2012, with VA PTF and OPC databases for FY 2002 through 4th Qtr FY 2012. The DoD DMDC identified and provided the identity of these Veterans to the VA EP on October 31, 2012.

³ The Vet Center counts were based on matching the DMDC OEF/OIF/OND roster with Vet Center users’ records through 4th Qtr FY 2012.

⁴ The number for “Grand Total” (n= 273,351) indicates the sum of “Any Total Patients” (n=250,242) and “Vet Center PTSD” (n=66,730) after excluding duplicates (n=43,621).

⁵ The number for “Primary” indicates the total number of unique Veterans whose primary reason for the inpatient or outpatient visit was for treatment or evaluation of PTSD.

⁶ The number for “Any” indicates the total number of unique Veterans with PTSD whether or not the primary reasons for the inpatient or outpatient visit was for treatment or evaluation of PTSD.

⁷ In 2002, VA merged VISNs 13 and 14 to form VISN 23.

⁸ The number of PTSD cases reported by the RCS shows a greater than expected increase from 3rd Qtr to 4th Qtr FY 2012. RCS revised its method of enumeration to more accurately account for individuals who initially encountered RCS for Outreach or Other Issues and were subsequently coded for probable or possible PTSD.

OEF/OIF/OND Veterans Coded with Potential PTSD
