

Scallop ACL compliance Issues

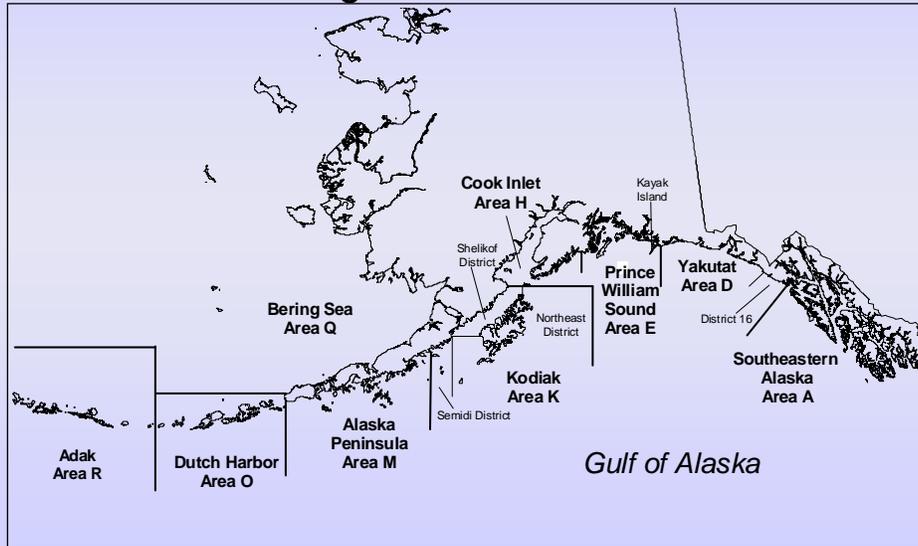

Diana Stram
North Pacific Fishery Management Council

Scallop current catch relative to OFL

- MSY = 1.24 mill lbs shucked meats
 - Average catch statewide 1990-1997 (drop 1995)
 - 39-66% MSY since 1996
 - $F_{OFL} = M=0.13$ (~12% per year statewide)

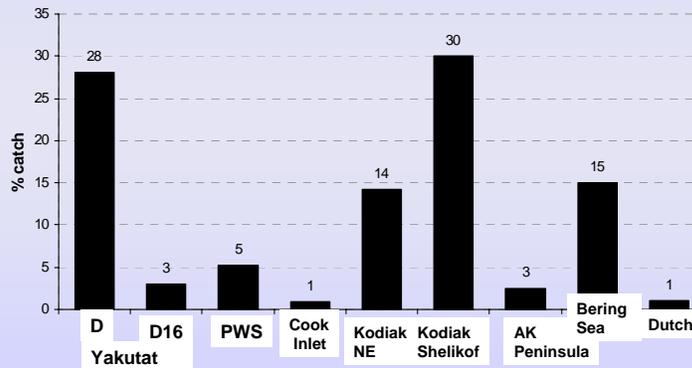

GHL and catch managed by individual registration area

Catch by registration area

1998/99 - 2007/08 Alaska Scallop Catch by Registration Area

Biennial surveys (and biomass estimates) in two areas (only)

- Cook Inlet (Area H) Kamishak Bay: south and north beds
 - Std survey area for both beds
- PWS (Area E) Kayak Island: east and west beds
 - Variable biomass, std survey area since 2008

ACL compliance issues for scallop

- Process of SSC recommendation: Need to add this review and recommendation process
- How to address non-weather-vane scallop stocks
 - EC
 - Remove from FMP
- Estimation of MSY
 - Currently average catch, does not include closed areas that may re-open to fishing therefore may need re-estimation regardless
 - Statewide (as present) or look at regional OFLs despite lack of available information (regional average catch?)
- How to set ACL (ABC)?
 - Statewide or regional?
 - % buffer below MSY level: use defaults as suggested?
 - Statewide ACL as sum GHs by registration area
 - 100% observer coverage therefore management uncertainty very low

Survey Data by region

- Kamishak Bay
- Kayak Island

Kamishak

Survey Year	Number stations sampled	Mean catch kg/nm	Estimated abundance	Estimated 95% CI	CV	Scallop density (scal/m ²)	Average weight (g/scal)	Estimated biomass q = 1.0 (kg meat)
<u>North Bed</u>								
1996	26	62.9	16,298,521 ±	6,190,250	18.4%	0.053	264	367,980
