HIGH PROFILE NEW ISSUE

Energy	Northwest

Bonneville Power Administration

Rating Rationale

The Aaa rating on Energy Northwest revenue bonds is rooted in the legal arrangements between Energy Northwest and Bonneville Power Administration (BPA) that secure the bonds and obligates BPA to pay for debt service. BPA has an Aaa issuer rating with a negative rating outlook.

Strengths

- Event and court-tested net billing agreements obligate BPA to ensure timely and sufficient revenues to pay debt service on Energy Northwest revenue bonds
- » BPA has strong business fundamentals and is a U.S. Energy Department line agency
- BPA has power supply contracts through FY 2028 with 125 participants »

Challenges

- Significant hydrology and wholesale power market exposure »
- Conflicting uses of Columbia River and environmental litigation or mandates »
- Extensive ratemaking process »
- Decline in financial reserves and financial metrics »

Outlook

The negative outlook reflects BPA's sustained decline in its financial reserves available for risk and debt service cover ratios, BPA's proposed rate plan for FY 2012-2013 and extended period of below average hydrology.

What Could Change the Rating-UP

The ratings could stabilize if BPA executes policies to ensure strong internal reserve levels or implements enhanced risk management policies that fully mitigates hydrology and market price risk.

What Could Change the Rating-DOWN

The rating is likely to be lowered if BPA continues to experience declines in its reserves available for risk, if BPA's current rate proposal is approved, if there are federal constraints placed on BPA or if BPA's net billing agreement obligation is violated.

Analysis

Moody's has assigned the credit rating of Aaa to Energy Northwest's sale of approximately \$155 million of Columbia Generating Station Electric Revenue Bonds, Series 2010-D (Build America Bonds – Direct Payment). The bonds are expected to price in December 2010. Moody's has also affirmed the Aaa rating on the outstanding bonds for Project No. 1, Columbia Generating Station and Project No. 3.

Moody's has also affirmed the Aaa issuer rating on the Bonneville Power Administration.

The Aaa rating on Energy Northwest's revenue bonds is rooted in the legal arrangements, principally in the net billing agreements between Energy Northwest and BPA that secure the bonds and obligates BPA to pay for debt service on the Project No 1, Columbia Generating and Project No 3 revenue bonds.

The negative outlook reflects BPA's sustained decline in its financial reserves available for risk and debt service cover ratios, BPA's proposed rate plan for FY 2012-2013 and extended period of below average hydrology. Driven by poor hydrology, low wholesale market prices and rising non-federal debt service, total reserves available for risk dropped a cumulative 34% over a two year period ending FY 2010 while non-federal debt service coverage dropped to around 1.9 times compared to 4.4 times average from 2004 to 2008. Looking forward, Moody's does not expect a major improvement in reserves and non-federal debt service coverage ratios especially since BPA's secondary market sales faces challenging market conditions over the next several years of low wholesale prices, sustained lower demand and increasing amounts of wind generation during BPA's peak surplus energy sales season. Moody's also recognizes that BPA effectively assumes average hydrology in their forecast while BPA's hydro generation has experienced below average levels for the past 10 of the 11 years.

Legal Security: Event - and Court - Tested Net Billing Agreements with BPA Provide Strong Security to Energy Northwest Revenue Bonds

Bond security is the pledge of revenues including amounts derived from the net billing agreements with the United States Government, acting by and through the BPA Administrator. The bonds are not general obligations of the United States of America and are not secured by the full faith and credit of the United States of America. The BPA has made a clear and tested commitment to support the payment of the Energy Northwest Revenue bonds through the net billing agreements between Energy Northwest participants and BPA. The agreements have withstood more than 25 years of stressful circumstances, such as the legal challenges in the early 1980s to Nuclear Project 1, the Columbia

Generating Station, and the Project 3 bonds brought about by the Project 4 and 5 bond defaults (Projects 4 and 5 were not backed by the BPA net billing agreements). Also, despite the termination of the construction of Projects 1 and 3, (the projects were formerly nuclear generation units that were expected to be constructed) the net billing agreements are still in force and debt service on those project bonds are being paid.

The net billing agreements obligate project participants, consisting of numerous public utility districts and municipal and electric cooperative utilities, to pay Energy Northwest a proportionate share of the Energy Northwest project's annual costs, including debt service, in accordance with each participant's purchase of project capability. BPA, in turn, is obligated to pay (or credit) the participants identical amounts by reducing amounts the participants owe for power and service purchased from BPA under their power-sales agreements. Even after project termination, such as in the case of Projects 1 and 3 (the construction of the nuclear units was terminated), the obligation for debt service is in effect until the Energy Northwest bonds are retired.

In 2007, Energy Northwest and BPA adopted a new direct pay agreement whereby Energy Northwest participants directly pay all costs to BPA rather than through Energy Northwest.

The US Court of Appeals for the Ninth Circuit affirmed in the City of Springfield v. WPPSS; 752 F.2d.1423, the legal authority of all participants to enter into the net billing agreements; the US Supreme Court denied a petition for a writ of certiorari. The obligation of BPA and the participants is in force whether the projects are operable or terminated.

Most importantly and a source of significant credit strength, BPA has agreed, in the event of any insufficient payment by a participant, to pay the amount due in cash, directly, and in a timely manner. While the net billing agreements may be terminated prior to the maturity on the related net billed bonds, the obligation of the participant to pay their proportionate share of the debt service continues, as does the obligation of BPA to credit these payments or make a payment if in any event there was an insufficient payment by a participant.

Use of Bond Proceeds

The proceeds of the offering is expected to be used to fund an advance fuel purchase and a portion of the upcoming capital expenditures for the Columbia Generating Station.

Background on BPA

In 1937, an act of Congress created BPA to market power from hydroelectric facilities constructed on the Columbia River. The Army Corps of Engineers and the Bureau of Reclamation operate the hydro projects. BPA is one of four regional power marketing agencies within the US Department of Energy. Many of the statutory authorities of BPA are vested with the Secretary of Energy, who appoints and acts through the BPA administrator. BPA operations are divided between Power Services and Transmission Services though all cash flows ultimately flow into one account (BPA Fund) at the US Treasury. The Power Services business is responsible for the revenue and costs of BPA's generation resources and represents the largest segment at 78% of BPA's revenues in FY 2010. The Transmission Services business is responsible for the revenue and costs of BPA's generation services business is responsible for the revenues and costs of BPA's deterric transmission system and generates the remainder of BPA's revenues. BPA's wholesale power rates are approved by the Federal Energy Regulatory Commission (FERC) to ensure full-cost recovery. Federal law requires BPA to meet specified energy requirements in the Northwest region. BPA is also required to implement conservation measures and to provide transmission services. The federal hydro projects also serve

numerous purposes, including irrigation, navigation, recreation, municipal and industrial water supply, fish and wildlife protection, and power generation. The amount of power produced by the federal hydro generation units varies with annual precipitation and other weather conditions.

Credit Fundamentals

Strengths

- » BPA benefits from U.S. government support including limited direct borrowing authority with the US Treasury and the legal ability to defer its annual US Treasury repayment if necessary to meet non-Federal debt service commitments (which includes Energy Northwest bonds) under the net billing agreements. BPA has established the planning policy of meeting a 95% probability over the next two years of making its U.S. Treasury payment on time which is a key strategy to ensure timely revenue bond debt service payment
- » BPA's extensive hydroelectric system strongly anchors its competitive wholesale rate position relative to market based prices over the long term
- » BPA's important role in the northwest region of the U.S. BPA owns and operates 75% of the bulk transmission system and markets low cost hydroelectric power amounting to 35% of the region's power
- » BPA sells a majority of its power under an 18-year power supply contracts with creditworthy public power entities and derives roughly 25% of revenues from a stable electric transmission business

Challenges

- » Significant exposure to hydrology risk and wholesale power markets contributes to cash flow volatility
- » Extensive ratemaking process creates potential complications in timely rate recovery
- » Conflicting uses of Columbia River, (flood control, irrigation, navigation, recreation, municipal and industrial water supply, fish and wildlife protection and power generation), can hinder the ability of the system to meet load and contribute to substantial additional costs
- » Development of wind energy in the region has presented complicated transmission and load balancing issues
- » BPA's historically strong liquidity has declined substantially and is expected to decline further
- » BPA's financial metrics have declined over the last two years.

Key Rating Drivers

BPA's Status as a U.S. Energy Department Line Agency and Its Relationship to the Federal Government Are Important to the Credit Rating

While BPA's obligations do not benefit from the full faith and credit of the United States Government, BPA benefits from significant support from the US government and strong interrelationships as shown below. In a major stress scenario, Moody's expects any US government support to BPA is likely to be provided through the established US Treasury credit lines or deferral of payments to the US Treasury.

Borrowing Authority with US Treasury. BPA has authority to sell to the United States Treasury \$7.7 billion principal amount of bonds, which benefited from a \$3.25 billion increase in February 2009. At September 30, 2010, BPA had \$2.51 billion of outstanding borrowings with the US Treasury. The borrowed funds are to be primarily used to fund capital programs including \$1.25 billion allocated for capital and environmental programs. As part of the \$7.7 billion, BPA has a \$750 million line of credit, which can be used to fund BPA's operating expenses.

Ability to Defer Payments to US Treasury. BPA is required by statute to defer its annual Treasury payments if funds are needed to meet its non-federal debt obligations like the Energy Northwest revenue bonds and thus BPA's US Treasury obligations are considered subordinated to BPA's obligations on the Energy Northwest net billed bonds. The deferral ability provides BPA a major source of financial flexibility under extreme situations though BPA has not deferred such payments since 1983 and any deferral could have negative political implications. Over the next three years, BPA is forecasted to make payments to the US Treasury equal to roughly \$700-800 million per year.

Line Agency of US Department of Energy. BPA is not a government corporation but a traditional line agency that is part of the US Department of Energy. The Energy Northwest /BPA contracts are contractual obligations of the US, and are executed by the US Department of Interior. (See Springfield vs. WPPSS 564F Supp 90). The link between BPA and the federal government is further strengthened because BPA must submit annual budgets to Congress and the Department of Justice remains responsible for BPA litigation. There were no adverse proposals to BPA operations or finances contained in the President's budget proposed for FY 2011. The Federal Energy Regulatory Commission (FERC) must confirm the electric rates established by BPA.

Powerful Political Constituencies. Due to the importance to the region BPA serves, there is significant northwest U.S. representation on key U.S. House and Senate committees that deal with legislation related to BPA. For example, several US senators from the Northwest are on the Senate Energy and Natural Resources Committee.

BPA Serves Important Public Policy Objectives. Since the creation of BPA, numerous statutes have been enacted to address issues involving BPA and the Northwest region. Among them are the Bonneville Project Act of 1937, The Flood Control Act of 1944, the 1974 Federal Columbia River Transmission System Act, the Pacific Northwest Electric Power Planning and Conservation Act of 1980, and the 1996 BPA Appropriations Refinancing Act. Each of these federal statutes include provisions that aid BPA's financial health while meeting broader public policy obligations.

In the 2001-2003 Pacific Northwest energy crisis, BPA demonstrated it had other federal financial liquidity tools that were available should there be an adverse situation. For example, in 2001, BPA used credits under Section 4(h)(10)c of the Northwest Power Act which relate to federal payment of fish and wildlife protection costs to reduce the actual cash payment to the U. S. Treasury. Without the credits, the power rate increase on customers would have been more significant. BPA identified sources of liquidity of over \$1.5 billion to bridge any gaps due to short-term cash flow shortfalls.

Economic, Social, and Political Ramifications of A Failure of BPA. BPA provides 35% of the electric power in the Pacific Northwest, owns 75% of the bulk electric power transmission, and 80% of the transmission capacity of the Pacific Northwest-Pacific Southwest Intertie . BPA is also responsible for significant regional environmental protection programs as well as for coordinating river operations and certain treaty responsibilities with Canada. BPA funds 70% of the fish and wildlife mitigation and recovery efforts in the Columbia Basin. A BPA failure would have a far-reaching effect on the region, which would serve as an important incentive. In addition, as the Northwest region looks to diversify and add to its power resources, BPA is playing a major role in building new transmission lines to insure new wind generation constructed in the region can efficiently get to the regional marketplace.

Fundamentally Strong Underlying Assets and Competitive Power Costs

BPA markets energy to nearly 12 million people from 31 federally owned hydroelectric facilities constructed on the Columbia River. About 94% of generating capacity is from 12 projects. The facilities comprise more than 80% of BPA's firm power supply (See Figure 1). Power dispatched from Energy Northwest's Columbia Generating Station nuclear plant represents about 10% of BPA' total energy resources. Output of the federal hydro system is 10,755 average megawatts annually during median water conditions and 8,477 average megawatts annually under low water conditions. BPA's key business consists of power sales to public and private utilities for resale purposes.

Over a long-term horizon, BPA's cost structure remains competitive as a result of the dominant and low-cost hydroelectric generation though BPA's cost competitiveness has decreased over the last two years. In 2011, BPA's Full Requirement Power Rate is expected to be about \$29/MWh. Historical regional market prices in the region were around the \$50/MWh range from 2004 to 2008 though prices in 2009 and 2010 averaged around \$32/MWh due to the recession and low natural gas prices. Moody's believes that the long-term fundamental strength of BPA's hydroelectric assets remains strong and BPA remains well positioned against potentially tougher emissions regulations including CO2.

BPA and Regional Utilities Signed Power Supply Contracts for Beyond 2011

Under the Northwest Power Act, BPA has a statutory obligation to meet electric power loads in the Northwest region that are placed on BPA by electric power utilities. In December 2008, BPA executed new offtake contracts with 125 publicly owned and cooperatively owned utilities for power service from FY 2012 through FY 2028. The longer-term offtake contracts are to establish greater longer-term certainty for both price and infrastructure development decisions. As part of the new offtake contracts, BPA has developed tiered rates so pricing signals can be incorporated into resource planning. Tier one rates would be for the power from the federal hydro system and tier two for augmentation if the utility contracts for any additional power resource needs.

Energy Northwest Columbia Generating Station Maintains Improved Operating Record But Debt Of Three Nuclear Projects Are a Substantial Cost Burden to BPA

Of the original five planned nuclear units, the Columbia Generating Station is the only nuclear unit of the original five planned in operation with all the power economically dispatched by BPA. Consequently, BPA only benefits from power generated at Columbia Generating Station but remains responsible for debt at Project No 1, Columbia Generating Station and Project No 3. The debt at all three projects totaled \$5.7 billion at FY 2010 and represented 90% of BPA's non-federal debt and

44% of BPA's total debt. Non-federal debt service associated with the three projects totaled \$547 million in FY 2010.

Energy Northwest operates the Columbia Generating Station, the 1,130 MW nuclear facility, which continues to have an overall improved performance record. In FY 2010, the nuclear facility generated 8,124 GWhs of energy and output from the Columbia Generating Station that amounts to around 9.3% of BPA's energy resources. BPA dispatches all of the energy generated at the nuclear unit.

The Columbia Generating Station has had an improving record with capacity factors over the last nine years ending December 2009 at around 87% compared to a low capacity factor of 72.4% since commercial start date. Total production energy production increased in FY 2010 to 8.1 million MWh produced compared to 7.7 million MWh produced in FY 2009 due to an off year of the two-year refueling and maintenance outage cycle. The Columbia Generating Station did incur four unplanned outages in FY 2009 resulting in lost production estimated at roughly 418 GWhs, which represented a manageable 5% of total production.

In 2010, Columbia Generating Station's cost of production was around \$34/MWh. For FY 2011, the cost of production at Columbia Generating Station is budgeted at \$55/MWh, mainly due to a refueling outage scheduled for May 2011.

The plant has had a relatively good safety-performance record with satisfactory ratings from both the Nuclear Regulatory Commission (NRC) and the Institute of Nuclear Power Operations. Energy Northwest's operating license extends to 2023. The facility has sufficient spent fuel storage including capacity expansion through 2024. In January 2010, Energy Northwest filed an application with the NRC for a 20-year license renewal to 2043.

Energy Northwest expects to spend \$96.6 million on capital improvements at Columbia Generating Station in FY 2011 and around \$50 million per year in FY 2012 and 2013. The capital improvements at Columbia Generating Station include such items as computer system and security upgrades; plant fire detection system upgrade; plant license extension; replacement of the main condenser; replacement or rebuilt of various motors and pumps and other improvements.

Extensive Ratemaking Process

BPA's ratemaking procedure involves an extensive process as laid out in the Northwest Power Act and could create complications and delays in timely recovery of BPA's costs. The Northwest Power Act contains specific ratemaking procedures, mandates justification and reasons in support of such rates and requires a hearing. The hearing provides an opportunity for third parties to refute or rebut material submitted by BPA or other parties and provides an opportunity for cross-examination. The BPA Administrator ultimately decides the rate based on the hearing record including all information submitted. Rates established by BPA may become effective only upon confirmation and approval by FERC. Furthermore, the US Ninth Circuit Court reviews all of BPA's ratemaking for conformance with all Northwest Power Act standards. Moody's notes that the BPA is required by law to propose rates to meet all its costs and that BPA proposes rates at levels whereby it can meet its US Treasury payments at a 95% confidence level based on its cash flows and reserves. While BPA's approach should ensure a high probability of payment to the US Treasury and an extremely high probability of payment on non federal debt service, the 95% confidence level does not ensure the sustaining of strong reserves and could result in substantial decline in reserves during low water or poor wholesale price years such as FY 2009 and FY 2010. Beginning with the Fiscal 2010-2011 Rate Case, BPA plans rate

cases every two years, which is shorter than the prior 3-year rate case period. In a stress situation, BPA could file an expedited rate case with FERC and the whole process could take several months for an interim rate approval.

BPA has historically demonstrated willingness to implement higher rates in a difficult situation such as the power crisis of 2000-2001. Wholesale power rates were raised by more than 40% to manage the combination of the impact of drought conditions on hydro production and BPA's need to purchase power during a high power price environment. Subsequently wholesale rates have fallen and BPA remains competitive within the region though currently market prices are near BPA's rates. For FY 2012-2013, BPA is proposing an 8.5% average rate increase and approval of the rate is expected around mid-2011.

BPA is also able to make rate adjustments at beginning of the first year of the rate period and one time in the middle of the two-year rate period under the Cost Recovery Adjustment Clause (CRAC). CRAC permits an one-year increase in rates up to \$300 million if accumulated net revenues are at or below a pre-determined threshold. The CRAC feature serves as an additional tool to reduce BPA's exposure to hydrology and wholesale price volatility though the annual basis of the test and low trigger point limit the benefit of the CRAC mechanism. BPA can also add a surcharge if fish recovery costs are higher than budgeted. For FY 2007-2009, the CRAC trigger points equated to roughly \$750 million in projected remaining reserves in the Bonneville Fund attributed to BPA's Power Services operations. The CRAC trigger points in the FY 2010-2011 Rate Period equate to roughly zero projected remaining reserves in the Bonneville Fund available for risk attributable to Power Services operations. At Fiscal Year 2010, reserves tied to Power Services represented approximately \$233 million. For the FY 2012-2013 rate proposal, BPA has continued to set the CRAC mechanism at a similar level and the continuation of the low threshold in the face of declining reserves is one of the drivers of the negative outlook. Furthermore, the FY 2012-2013 rate proposal is unlikely to result in improvement to BPA internal reserves and only results in a moderate improvement in financial metrics from the recent lows in FY 2009 and FY 2010. Thus BPA's rating could be downgrade if the FY 2012-2013 rate proposal is approved.

For FY 2010-2011, BPA has a NFB Adjustment, which would increase the CRAC adjustment cap if costs rise due to adverse events related to the litigation over the 2008 Columbia River System Biological Opinion (2008 Biological Opinion). Additionally, BPA has a related NFB Emergency Surcharge that would allow BPA to increase power rate levels at any time in the 2010-2011 Rate Period in order to recover certain costs tied to the 2008 Biological Opinion if the probability for payment to the US Treasury falls below 80%. For the FY 2012-2013 rate proposal, BPA has proposed the same NFB Adjustment and surcharge mechanism.

Material Hydrology and Wholesale Price Risk Exposure Partially Mitigated by Strong But Declining Liquidity

BPA's financial results can be materially impacted by hydrology in the Columbia River Basin and wholesale power prices in the region since wholesale power sales represent roughly 20% of total revenues in a typical year and contributed significant, but volatile cash flows to BPA (Figure 2 for historical regional prices and water flows). For example, BPA's hydro generation assets has experienced below average hydrology for the last 10 of the 11 years.

FIGURE 2

Energy Northwest	
------------------	--

	Mid Columbia On Peak (\$/MWh)	Mid Columbia Off Peak (\$/MWh)	Columbia River Runoff at The Dalles, OR
2004	45	39	85%
2005	63	50	82%
2006	51	38	106%
2007	56	44	92%
2008	65	52	95%
2009	36	28	88%
2010*	37	28	83%

*Estimated for 2010

From 2006 to 2008, BPA benefited from above average water or high power prices that contributed to a high level of total financial reserves totaling \$1.646 billion at FY 2008 consisting of \$1.27 billion of reserves available for risk and \$378 million of encumbered reserves. Moody's focuses primarily on the reserves available for risk since the encumbered reserves consist of customer deposits for transmission interconnection, deposits for energy efficiency and other funds meant for specific purposes. For the two-year period ending FY 2010, BPA experienced a cumulative decline in reserves available for risk of \$429 million to \$839 million due to low wholesale prices and hydrology in addition to higher operating costs. This demonstrates the material impact that hydrology and the regional wholesale power prices can have on BPA's financial performance.

Low hydrology, lower wholesale prices and increases in non-federal debt service have also contributed to non-federal debt service coverage ratios dropping from the 2004-2008 average of 4.4 times to an average of 1.9 times over the last two fiscal years while total debt service coverage ratio (including US Treasury payments) decreased to 0.80 times from an average of 1.1 times according to Moody's calculations. Over the next three years, Moody's estimates non-federal debt service will be moderately higher than 2 times based on BPA's current forecasts, which assumes average hydrology.

Over the medium term, BPA faces a challenging wholesale market environment whereby the recession has contributed to electricity demand in the Northwest region falling by an estimated 9.4% from 2008 to 2010 according to the North American Reliability Council's (NERC) 2010 long term reliability assessment. Based on NERC's forecasted 1.2% demand growth, total annual energy consumption in the region is not expected to exceed 2008 levels of demand until 2019 and the lower demand levels will likely contribute to lower energy prices compared to the 2004 to 2008 time period.

Moody's also recognizes that forward prices at Mid Columbia reference price remain low at around \$31/MWh in 2011 and average around \$36/MWh for the next 3 years, which is well below the 2006-2008 average of around \$53/MWh. Actual realized prices by BPA could be lower given the large amounts of new wind in the region and the correlation between peak wind energy production and

BPA's peak surplus energy sales. Approximately 3,200 MW of wind generation is connected to BPA's transmission system and BPA expects another 1,800 MW could be built through 2015. The peak wind generation occurs during the spring months, which approximately matches BPA's main seasonal surplus power generation.

For FY 2011, BPA expects reserves available for risk to decline further to \$685 million and reserves available for risk allocated to Power Services is forecasted to be \$93 million which is near the CRAC trigger point of approximately zero. Transmission Services' reserves available for risk remains strong and is forecasted be around \$593 million in FY 2011. Power Services can utilize the Transmission Services's reserves; however, Power Services will have to 'repay' with interest any reserves it utilizes from Transmission Services. Over the longer term, Moody's views the Transmission Services reserves will be needed by BPA given the nearly five-fold increase in transmission capital expenditures by FY 2013 compared to FY 2008. Additionally, BPA could utilize the forecasted \$244 million of encumbered reserves in FY 2011 though BPA would have to replenish any utilized amount as the encumbered reserves are meant for specific purposes.

BPA separately has an aggregate availability totaling \$750 million under multiple lines of credit with the US Treasury to fund BPA's operating costs. The last line of credit expires in September 30, 2013 and any draw needs to be repaid by September 30, 2014. Given the decline in BPA's internal reserves, BPA is increasing its reliance on the US Treasury line as a source of liquidity.

Weakening of BPA's internal financial reserves, sustained decline in coverage ratios and likely challenging market conditions over the next three years result in significantly decreased financial flexibility and represents several of the major drivers of the negative outlook. The continued decline in reserves and a lack of a robust plan to ensure historically strong reserves or structural change in BPA's rate mechanism to fully mitigate wholesale and hydrology risk will likely result in a rating downgrade.

Conflicting Uses of Columbia River Including Fish and Wildlife Conservation Results in Major Costs for BPA

BPA faces conflicting uses of the Columbia River and environmental issues contribute significantly to BPA's costs. BPA is subject to the Endangered Species Act (ESA) and approximately fifteen fish species are affected by the operation of the federal dam system. For FY2010, BPA's fish and wildlife costs to meet ESA and non-ESA requirements is estimated at approximately \$802 million and is another major cost burden to BPA. Included in the \$802 million are \$393 million of direct costs including such items as fish hatcheries and \$403 million of estimated operational impacts such as replacement power purchase costs and forgone revenues.

In May 2008, the 2008 Biological Opinion sought major changes compared to prior biological opinions and implementation of the 2008 Biological Opinion with associated tribal and statement funding agreements could raise BPA's costs by \$100 million per year over a ten-year period. The 2008 Biological Opinion remains subject to litigation in federal court. In May 2010, four federal agencies, including BPA, completed the voluntary remand of the 2008 Biological Opinion and a 2010 Supplemental Biological Opinion was filed with the federal court, which included the Adaptive Management Implementation Plan and other updates. Moody's expects that the 2008 Biological Opinion will ultimately lead to higher costs for BPA likely around BPA's cost estimate of \$100 million per year and an extreme scenario such as breeching of one or more the Snake River Dams is highly unlikely. Moody's understands any breeching of the Snake River Dams will require approval by the US Congress and extensive studies that will likely to take multiple years.

Moody's notes that BPA was able to recover a portion of the Fish and Wildlife costs borne by the BPA from the US Treasury since a portion of the costs are allocated to non-power related federal purposes such as irrigation and flood control. For FY 2010, BPA recovered \$123 million, which was credited against payments owed to the US Treasury.

Ultimately, the heavy cost burden of BPA's fish and wildlife costs weighs down the benefits of BPA's highly competitive hydro generation and large unexpected costs could be negative for credit quality.

May 1982:	A1
February 1982:	Aa
November 1975:	Aaa

Nuclear Projects Nos. 4 and 5 (4):		
June 1983:	Withdrawn	
June 1983:	Саа	
January 1982:	Suspended	
June 1981:	Baa1	
February 1977:	A1	
(1) Not a BPA-backed obligation.		

(1) Washington Public Power Supply System Project 1 was a partially constructed nuclear unit that Energy Northwest terminated. Energy Northwest has plans for demolition of the project and restoration of the site. Outstanding revenue bonds secured by net billing agreements with BPA.

(2) Columbia Generating Station (formerly Project 2) is an operating 1157 MW nuclear generation facility.

(3) Washington Public Power Supply System Project 3 was a partially constructed nuclear unit that was terminated by Energy Northwest. The site was transferred to the Grays Harbor PUD 1 and developed into a combustion turbine site. Outstanding revenue bonds secured by net billing agreements with BPA.

(4) Projects 4 and 5 terminated in 1982 and projects 4 and 5 bonds went into default on July 22, 1983. Revenue bonds were not backed by net billing agreements.

CREDIT RATINGS ARE MOODY'S INVESTORS SERVICE, INC.'S ("MIS") CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MIS DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL, FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. CREDIT RATINGS DO NOT CONSTITUTE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS ARE NOT RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. CREDIT RATINGS DO NOT COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MIS ISSUES ITS CREDIT RATINGS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process. Under no circumstances shall MOODY'S have any liability to any person or entity for (a) any loss or damage in whole or in part caused by, resulting from, or relating to, any error (negligent or otherwise) or other circumstance or contingency within or outside the control of MOODY'S or any of its directors, officers, employees or agents in connection with the procurement, collection, compilation, analysis, interpretation, communication, publication or delivery of any such information, or (b) any direct, indirect, special, consequential, compensatory or incidental damages whatsoever (including without limitation, lost profits), even if MOODY'S is advised in advance of the possibility of such damages, resulting from the use of or inability to use, any such information. The ratings, financial reporting analysis, projections, and other observations, if any, constituting part of the information contained herein are, and must be construed solely as, statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities. Each user of the information contained herein must make its own study and evaluation of each security it may consider purchasing, holding or selling. NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

MIS, a wholly-owned credit rating agency subsidiary of Moody's Corporation (*MCO*), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MIS have, prior to assignment of any rating, agreed to pay to MIS for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Shareholder Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Any publication into Australia of this document is by MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657, which holds Australian Financial Services License no. 336969. This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001.

Notwithstanding the foregoing, credit ratings assigned on and after October 1, 2010 by Moody's Japan K.K. ("MJKK") are MJKK's current opinions of the relative future credit risk of entities, credit commitments, or debt or debt-like securities. In such a case, "MIS" in the foregoing statements shall be deemed to be replaced with "MJKK".

MJKK is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO.

This credit rating is an opinion as to the creditworthiness or a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be dangerous for retail investors to make any investment decision based on this credit rating. If in doubt you should contact your financial or other professional adviser.
