ENGINEERING AND DESIGN MANUAL

COAL REFUSE DISPOSAL FACILITIES

Second Edition
May 2009

NOTE: Instructions for using this DVD version of the Manual are provided on the next page

INSTRUCTIONS FOR USAGE OF THIS DVD MANUAL

This DVD requires Adobe Reader 7.0 or later. Other PDF viewing software may limit functionality. Adobe Reader can be downloaded at <http://get.adobe.com/reader/>

Bookmarks are provided for the Manual chapters, appendices and the reference list and are displayed at the left of the text.

Links in the Manual text in BLUE will transfer you to another location in the Manual such as a section header, figure or table. If you wish to return to the original link location, you can hold down the ALT key and hit the left arrow (←) key. On Mac computers hold down the Command key (⌘) and hit the left arrow key. If you move around at the new location in the text, you may have to repeat this action several times to return to your origination point. At the center of the bottom of most pages there is a PREVIOUS VIEW link. Clicking on this link will return you to your previous location in the document IF (and only if) you have not scrolled or otherwise moved away from the original landing location. Hitting the left arrow key without holding down the ALT key will move you back one (1) page only.

The Table of Contents (TOC) listings are linked to the appropriate pages in the Manual text. Clicking on a specific section header in the TOC will land you on the page where the section header is located in the text. It is recommended that whole pages be displayed when clicking on the TOC links because the section header that you are looking for may not be displayed on your monitor if the page is “zoomed up” so that only part of the page is displayed. When you find the section you are looking for, you can zoom to a comfortable reading size.

Links in GREEN will transfer you to technical references. Some of these are large documents and may require a few seconds to load. These documents are in PDF format and are stored on the DVD. You can return to the link in the Manual text by holding down the ALT key and hitting the left arrow (←) key. On Mac computers hold down the Command key (⌘) and hit the left arrow key. The more you move around in the reference document, the more times you will have to execute ALT + left arrow or ⌘ + left arrow. If you use the reference document extensively, you may not be able to link back to the Manual in this manner, and then it will be necessary to close the reference document in Adobe Reader and then go to the File > History list and reopen Manual 2009. This procedure will return you to the Manual title page and not to the page where you linked from previously. Reference documents can be opened in a new window by holding down the CTRL key when clicking on reference links, and we recommend this procedure. On Mac computers hold down the Option key (⌥) when clicking the link.

If you load the Manual PDF to your computer, the references should be loaded to the same folder.

Suggestions for changes, corrections, or updates to the Manual should be directed to:

Mine Safety and Health Administration
Pittsburgh Technical Support Center
Mine Waste and Geotechnical Engineering Division
P.O. Box 18233
Pittsburgh, PA 15236
Attention: Dam Safety Officer

The engineering guidance presented in this document has been compiled or developed by D’Appolonia Engineering under contract with the Mine Safety and Health Administration (MSHA) from referenced sources as well as input from MSHA and the coal industry. However, the guidance, recommendations, and conclusions presented herein may not necessarily represent the official policies of MSHA or the U.S. government.

Preface

This Manual presents guidance on procedures for use in the engineering design, construction monitoring, operation and inspection of coal refuse impoundments and embankments in the United States. It is an update of the original 1975 edition and reflects advances in engineering, construction, and facility monitoring and operations practices. The primary intent of the Manual is to serve as a uniform guide to safe refuse disposal practices for those concerned with coal mining and preparation. The Manual serves this purpose in several ways by: (1) providing experienced embankment dam design engineers with the characteristics of coal refuse and its disposal so that their experience can be appropriately applied; (2) providing specialized technical knowledge concerning embankment design in a form that can be used by engineers who do not specialize in this field; (3) updating geotechnical, structural, hydrologic and hydraulic design criteria for a range of embankment and impoundment conditions, and spillway and drainage structures; (4) providing guidance on disposal requirements and limitations for mine operators to include refuse disposal in the overall coal production operation; and (5) providing guidance on construction, operation, inspection, monitoring and instrumentation, and emergency action planning associated with the implementation of safe and reliable designs.

The 1975 edition of the Manual was prepared following the failure of a coal waste dam at Buffalo Creek, West Virginia, that resulted in 125 fatalities. This Manual update was prompted by the recognition that significant advances have been made in the fields of coal waste disposal and dam safety in the 30-plus years since the original Manual was published. Another impetus was an incident that occurred in Martin County, Kentucky, in 2000 in which over 300 million gallons of water and fine coal refuse from a slurry impoundment broke into an underground mine. Slurry subsequently flowed out of two mine openings and impacted streams in two separate watersheds. This incident prompted the U.S. Congress to provide funding to the National Research Council (NRC) to examine ways to reduce the potential for similar accidents. The NRC's report, "Coal Waste Impoundments: Risks, Responses, and Alternatives," which was released in 2002, included a number of recommendations for MSHA. One recommendation was that MSHA "continue to adopt and promote the best available technology and practices with regard to site evaluation, design, construction, and operation of impoundments." MSHA reported to Congress that one measure to address the NRC recommendations would be this updating of the original Coal Refuse Design Manual.

The guidance presented in this Manual represents information, methods and procedures that are recommended for consideration by designers, coal operators, and regulators. The guidance presented in this Manual is not regulation and cannot be enforced as such. It is not intended to preclude the application of other credible methods and procedures or the use of other and new information that will result in a safe and reliable coal refuse disposal facility. It is the responsibility of the designer to investigate the requirements of the project, recognize the unique and critical aspects of the site conditions, and prepare designs that reflect actual site conditions, features, loadings, and constraints.

In this update of the Manual, new chapters have been developed on seismic design and on site mining and foundation issues, two topics that can have an impact on the type of disposal facility designed. The long operating life of coal refuse facilities makes monitoring of embankment behavior and facility maintenance particularly important. The sections on operation, monitoring, and instrumentation summarize procedures and devices to aid the designer and operator for defining and implementing an appropriate field observation program. In addition, general guidance is provided for the preparation of emergency action plans. These plans are recommended for certain dams and impoundments, and are required by some state regulatory agencies and encouraged by MSHA as part of addressing hazardous conditions under 30 CFR § 77.216-3.

In addition to concern for safety, the Manual addresses environmental considerations and controls that may influence the design of embankments and impoundments. Executive Order 11514 – Protection and Enhancement of Environmental Quality, dated March 5, 1970, requires all Federal agencies to “Monitor, evaluate and control on a continuing basis their agencies’ activities so as to protect and enhance the quality of the environment. Such activities shall include those directed to controlling pollution and enhancing the environment and those designed to accomplish other program objectives which may affect the quality of the environment.” The Manual does not present guidance in establishing criteria for environmental controls (e.g., hydraulic conductivity of liner systems), because such guidance is more appropriately left to other references and regulatory agencies.

This Manual is intended to provide the designer with an important source of information. However, the text and accompanying figures, tables and references should not be applied without proper engineering knowledge and judgment. Responsibility for actual design lies with the Professional Engineer in responsible charge of the work. The use or application of the methods and information contained herein is strictly the responsibility of the person utilizing the material. Designs should be based on sound engineering principles and judgment and reflect actual site conditions, and they should not merely be patterned after a successful design used at another location or possibly portrayed in the Manual. The designer should be diligent and recognize that advances in approaches, criteria, and methods will occur that may affect the applicability of portions of any reference or design guide.

This Manual was prepared by engineers and scientists with background and experience in the subject matter, with input from MSHA personnel who review design plans and conduct investigations at disposal sites. Overall direction and technical content were provided by Mr. Robert E. Snow of D’Appolonia Engineering. Manual coordination was performed by Dr. James L. Withiam, D’Appolonia, and final editing of the text was provided by Dr. J. Timothy Onstott. Proper recognition to the entire Project Team and D’Appolonia staff for their devoted efforts is not possible here. The main contributors to and reviewers of technical chapters are noted in Table 1.

Special recognition is also given to Mr. John W. Fredland, Dam Safety Officer for MSHA, as the contracting officer’s technical representative, Mr. Harold L. Owens, Mr. George H. Gardner, and to other MSHA personnel who provided many valuable comments in suggesting content and reviewing the text for publication. Finally, grateful appreciation is given to those in industry who provided input and review comments during the process of preparation of this document. This includes input from the National Mining Association and its consultants, as well as federal and state agencies and universities.

This Manual is available in hard copy and DVD. The DVD format includes hyperlinks and search capabilities using Adobe Acrobat Reader software. Hyperlinks allow the display of the highlighted citation of a figure, table, appendix, or selected reference in the text. Selected references (in PDF format) that are available in the public domain are included on the DVD version. For references not in the public domain, reasonable efforts were made to obtain copyright permission. No hyperlink is provided for references of substantial size, lack of availability in the public domain, or where permission for reprint could not be obtained. The complete citation for all references is provided in the References section.

TABLE 1 MAJOR AND EXPERT CONTRIBUTORS AND REVIEWERS

<u>Chapters 1 to 5</u> Introduction, Background, Planning and Design Components	Mr. Robert E. Snow, D'Appolonia	Mr. Richard G. Almes
<u>Chapter 6</u> Geotechnical Exploration, Materials Testing, Engineering Analysis and Design	Dr. James L. Withiam, D'Appolonia Mr. William J. Johnson, D'Appolonia Mr. Joseph W. Premozic, D'Appolonia Mr. Christopher J. Lewis, D'Appolonia	Mr. Richard G. Almes Dr. Umesh Dayal
<u>Chapter 7</u> Seismic Design: Stability and Deformation Analyses	Mr. Michael Paster, GEI Mr. William J. Johnson, D'Appolonia Mr. Christopher J. Lewis, D'Appolonia Mr. Richard F. Tobin, GEI	Dr. Gonzalo Castro, GEI Dr. William F. Marcuson Dr. Peter K. Robertson Mr. Blaise E. Genes, CEC Mr. Richard G. Almes
<u>Chapter 8</u> Site Mining and Foundation Issues	Dr. James L. Withiam, D'Appolonia Mr. Robert E. Snow, D'Appolonia Mr. Christopher J. Lewis, D'Appolonia	Dr. Vincent A. Scovazzo, J.T. Boyd Mr. Frederick R. Vass, Alliance Dr. Kelvin K. Wu Mr. Richard G. Almes
<u>Chapters 9 and 10</u> Hydrology and Hydraulics Environmental Considerations	Ms. Colleen M. Campbell, D'Appolonia Mr. Robert E. Snow, D'Appolonia Dr. J. Timothy Onstott, D'Appolonia	Mr. Richard G. Almes
<u>Chapters 11 and 12</u> Construction and Disposal Operations Monitoring, Inspection and Facility Maintenance	Mr. Robert M. Shusko, D'Appolonia Mr. Robert E. Snow, D'Appolonia	Mr. Frederick R. Vass, Alliance Mr. Richard G. Almes
<u>Chapter 13</u> Instrumentation	Dr. James L. Withiam, D'Appolonia	Mr. Richard G. Almes
<u>Chapter 14</u> Emergency Action Planning	Dr. J. Timothy Onstott, D'Appolonia	Mr. Richard G. Almes

Table of Contents

Preface	iii
List of Tables	xxvii
List of Figures	xxxiii
Acronyms	xli
Chapter 1	Introduction
Chapter 2	Background and Characterization of Coal Refuse
2.1 GEOLOGICAL NATURE OF COAL REFUSE	2-2
2.1.1 Origin of Coal	2-2
2.1.2 Coal-Related Rocks.....	2-3
2.2 COAL MINING AND COAL PREPARATION (CLEANING).....	2-4
2.3 REFUSE TRANSPORT AND DISPOSAL PLACEMENT	2-6
2.3.1 Coarse Refuse.....	2-6
2.3.2 Fine Refuse and Combined Refuse	2-6
2.4 COAL REFUSE CHARACTERIZATION.....	2-7
2.4.1 General Geochemical Characteristics	2-7
2.4.2 General Geotechnical Characteristics	2-7
2.4.2.1 Coarse Coal Refuse.....	2-8
2.4.2.2 Fine Coal Refuse Slurry	2-8
2.4.2.3 Dewatered Fine Coal Refuse.....	2-9
2.4.2.4 Combined Coal Refuse	2-9
2.4.2.5 Fine Coal Refuse Paste	2-10
2.5 DISPOSAL PRACTICES.....	2-10
2.5.1 Disposal Practices Prior to the Buffalo Creek Failure	2-10
2.5.2 Disposal Practices Subsequent to the Buffalo Creek Failure.....	2-11

Chapter 3 Coal Refuse Disposal Facilities and Other Impounding Structures

3.1	Hazard Potential for Disposal Facilities and Other Impounding Structures.....	3-1
3.2	Coal Refuse Impoundment Facilities.....	3-3
3.2.1	Size and Hazard Considerations.....	3-4
3.2.1.1	Impoundment Definition	3-4
3.2.1.2	Impoundments in Series.....	3-5
3.2.1.3	Incised Impoundments	3-5
3.2.2	Disposal Facility Configuration.....	3-6
3.2.3	Hazard Potential Rating.....	3-9
3.3	COAL REFUSE NON-IMPOUNDING FACILITIES (REFUSE PILES)	3-10
3.3.1	Coarse Refuse Embankments.....	3-10
3.3.2	Combined Refuse Embankments.....	3-11
3.3.3	Segregated Refuse Embankments	3-11
3.3.4	Configuration and Development Staging.....	3-11
3.4	COAL REFUSE SLURRY CELL FACILITIES.....	3-12
3.4.1	Size and Hazard Classification.....	3-13
3.4.2	Disposal Facility Configuration and Development	3-16
3.5	UNDERGROUND INJECTION SITES	3-17
3.5.1	Siting	3-17
3.5.2	Injection System Design	3-18
3.5.3	Risk Assessment and Response Plan	3-19
3.5.4	Contingency Plan	3-20
3.5.5	Monitoring Plan	3-20
3.6	RECOVERY (REMINING) OF COAL REFUSE DISPOSAL FACILITIES	3-21
3.7	OTHER IMPOUNDING STRUCTURES	3-22
3.8	SMALL PONDS AND SIMILAR STRUCTURES	3-23

Chapter 4

Project Planning

4.1	UNIQUE ASPECTS OF REFUSE DISPOSAL	4-1
4.2	OPERATIONS AND SITE-RELATED FACTORS	4-2
4.3	SUSTAINABLE MINING PRACTICES.....	4-4
4.4	ECONOMIC CONSIDERATIONS.....	4-4
4.5	ENVIRONMENTAL AND REGULATORY CONSIDERATIONS	4-6
4.6	PLANNING SEQUENCE.....	4-7
4.7	DESIGN SEQUENCE	4-7

Chapter 5**Coal Refuse Disposal Facility
Design Components**

5.1	DISPOSAL CAPACITY REQUIREMENTS AND SCHEDULING.....	5-1
5.1.1	Refuse Generation Rates and Design Capacity/Life.....	5-1
5.1.2	Slurry Impoundment Staging and Scheduling.....	5-2
5.1.3	Slurry Cell Staging	5-3
5.1.4	Non-impounding Refuse Embankment Staging	5-5
5.1.5	Amendments and Co-disposal of Combustion Waste	5-7
5.1.5.1	Amendments for Neutralization and Stabilization of Refuse	5-7
5.1.5.2	Co-disposal of Combustion Waste	5-7
5.2	EROSION AND SEDIMENTATION CONTROL AND DESIGN STORM RUNOFF MANAGEMENT.....	5-8
5.2.1	Erosion and Sedimentation Control	5-8
5.2.2	Slurry Impoundment Inflow Design Storm.....	5-9
5.2.3	Slurry Cell Facilities	5-9
5.2.4	Refuse Embankment Design Storm.....	5-11
5.3	FACILITY CONFIGURATION AND GEOMETRY	5-11
5.3.1	Regulatory Criteria	5-11
5.3.2	Embankment Design Considerations	5-11
5.3.2.1	Stability under Normal Operating Conditions	5-11
5.3.2.2	Stability under Extreme Events	5-12
5.3.2.3	Settlement and Subsidence.....	5-12
5.3.2.4	Environmental Issues, Impoundment Elimination and Site Reclamation.....	5-13
5.3.3	Impoundment Design Considerations	5-13
5.3.3.1	Settling and Clarification	5-13
5.3.3.2	Seepage Control and Containment	5-13
5.3.3.3	Spillway and Decant Systems.....	5-13
5.3.3.4	Subsidence and Breakthrough Potential	5-13
5.4	FOUNDATION AND MINE SUBSIDENCE CONSIDERATIONS	5-13
5.4.1	Foundation Materials	5-13
5.4.2	Abutment and Foundation Geometry.....	5-14
5.4.3	Mine Subsidence Potential	5-14
5.4.4	Impoundment Breakthrough Potential into Mine Workings.....	5-15
5.4.5	Mine Entry Barriers and Bulkheads	5-16
5.5	INTERNAL DRAINAGE AND EMBANKMENT SEEPAGE CONTROL.....	5-16
5.6	DECANT AND EMERGENCY SPILLWAY SYSTEMS	5-17
5.6.1	Decant Performance Considerations	5-17
5.6.2	Open-Channel Spillway Performance Considerations.....	5-18
5.7	SURFACE DRAINAGE CONTROLS.....	5-18

5.7.1	Permanent Drainage Controls	5-18
5.7.2	Temporary Drainage Controls.....	5-19
5.8	INSTRUMENTATION AND PERFORMANCE MONITORING	5-19
5.8.1	Seepage	5-19
5.8.2	Piezometric Levels.....	5-19
5.8.3	Pool Levels	5-19
5.8.4	Rainfall Data	5-20
5.8.5	Deformation or Movement.....	5-20
5.9	RECLAMATION, ABANDONMENT AND POST-MINING LAND USE	5-20

Chapter 6

Geotechnical Exploration, Material Testing, Engineering Analysis and Design

6.1	GEOTECHNICAL DESIGN PROCEDURES	6-2
6.2	GENERAL CONSIDERATIONS.....	6-2
6.2.1	Unique Characteristics of Refuse Disposal Facilities.....	6-2
6.2.2	Site Conditions	6-4
6.2.2.1	Topography.....	6-4
6.2.2.2	Climate/Weather.....	6-6
6.2.2.3	Geology and Surficial Soils.....	6-6
6.2.2.4	Miscellaneous Site Considerations.....	6-7
6.2.3	Embankment Materials	6-8
6.2.3.1	Coarse Coal Refuse.....	6-8
6.2.3.2	Fine Coal Refuse.....	6-10
6.2.3.3	Combined Refuse	6-10
6.2.3.4	Borrow Materials.....	6-11
6.2.3.5	Coal Combustion Products from Power Plants.....	6-13
6.2.4	Scheduling	6-18
6.3	DESIGN CONSIDERATIONS	6-19
6.3.1	Impounding Embankments	6-19
6.3.1.1	Homogeneous Embankments.....	6-21
6.3.1.2	Zoned Embankments.....	6-21
6.3.1.3	Foundation Seepage Control.....	6-26
6.3.2	Non-impounding Embankments	6-30
6.3.3	Slurry Cell Embankments	6-34
6.3.4	Embankment Construction Staging.....	6-35
6.3.4.1	Upstream Method.....	6-35
6.3.4.2	Downstream Method.....	6-37
6.3.4.3	Centerline Method.....	6-38
6.3.4.4	Embankments Supplemented with Borrow Material.....	6-39
6.3.5	Special Considerations for Existing Embankments.....	6-39
6.3.6	Other Impounding Embankments.....	6-41

6.4	SITE GEOTECHNICAL/GEOLOGICAL EXPLORATION	6-43
6.4.1	Background Data Sources	6-44
6.4.1.1	Topographic Maps.....	6-44
6.4.1.2	Geologic Maps and Publications.....	6-46
6.4.1.3	Agricultural Soil Surveys	6-47
6.4.1.4	Satellite Imagery, Aerial Photographs and Other Imagery.....	6-47
6.4.1.5	Past Investigations and Area Mining Plans	6-48
6.4.1.6	Individual Site Mapping	6-49
6.4.2	Surficial Reconnaissance and Geologic Mapping.....	6-49
6.4.3	Subsurface Exploration and In-Situ Test Planning.....	6-50
6.4.3.1	Program Planning.....	6-52
6.4.3.2	Subsurface Exploration and In-situ Test Methods and Applicability	6-54
6.4.3.3	Test Pits.....	6-55
6.4.3.4	Boring Methods and the Standard Penetration Test (SPT)	6-57
6.4.3.5	Undisturbed Soil Sampling	6-59
6.4.3.6	Rock Coring.....	6-59
6.4.3.7	Cone Penetrometer Test (CPT) and Piezocone Penetrometer Test (CPTu or PCPT)	6-61
6.4.3.8	Field Vane Shear Test (FVST)	6-63
6.4.3.9	Directional (Longhole) Drilling	6-66
6.4.3.10	Field Hydraulic Conductivity Tests	6-67
6.4.3.11	Groundwater-Level Measurements	6-68
6.4.3.12	Water Flow and Quality Tests	6-69
6.4.3.13	Backfilling of Boreholes.....	6-69
6.4.4	Geophysical Methods	6-70
6.4.4.1	Surficial Geophysical Techniques.....	6-71
6.4.4.1.1	Seismic Refraction	6-71
6.4.4.1.2	Seismic Reflection	6-74
6.4.4.1.3	Electrical Resistivity.....	6-76
6.4.4.1.4	Spontaneous Potential (SP)	6-78
6.4.4.1.5	Electromagnetics (EM).....	6-79
6.4.4.1.6	Ground Penetrating Radar (GPR)	6-80
6.4.4.1.7	Gravity.....	6-82
6.4.4.1.8	Magnetics	6-83
6.4.4.2	Borehole Geophysical Techniques	6-83
6.4.4.2.1	Crosshole and Downhole/Uphole Seismic Surveys	6-85
6.4.4.2.2	Video and Laser/Sonar Imaging.....	6-89
6.5	MATERIAL PROPERTY DETERMINATION THROUGH TESTING.....	6-90
6.5.1	Selection of Samples for Testing	6-91
6.5.1.1	Bulk and Disturbed Samples	6-91
6.5.1.2	Undisturbed Samples	6-95
6.5.1.3	Reconstituted Samples.....	6-96

6.5.2	Classification and Index Property Tests	6-96
6.5.2.1	Moisture Content.....	6-97
6.5.2.2	Specific Gravity	6-100
6.5.2.3	Atterberg Limits	6-101
6.5.2.4	Particle-size Distribution.....	6-102
6.5.2.5	Chemical Characterization	6-104
6.5.3	Compaction and Density Tests	6-105
6.5.3.1	Fine-grained Soils and Coal Refuse.....	6-105
6.5.3.2	Coarse-Grained Soils and Coal Refuse	6-108
6.5.4	Hydraulic Conductivity Tests	6-109
6.5.5	Geosynthetic Materials Tests	6-111
6.5.6	Consolidation Tests	6-112
6.5.7	Shear Strength and Related Tests	6-116
6.5.7.1	Vane-Shear Test	6-120
6.5.7.2	Direct-Shear Test	6-120
6.5.7.3	Unconfined-Compression Test	6-122
6.5.7.4	Triaxial-Compression Test	6-124
6.5.8	Seismic Property Characterization	6-128
6.5.8.1	Cyclic-Triaxial Test	6-128
6.5.8.2	Cyclic Loading Followed by Monotonic Loading.....	6-128
6.5.8.3	Resonant-Column Test.....	6-129
6.5.9	Rock Property Tests	6-129
6.5.9.1	Point-Load Index Test.....	6-129
6.5.9.2	Unconfined Compressive Strength Test.....	6-132
6.5.9.3	Indirect Tensile Strength Test	6-133
6.5.9.4	Rock Durability	6-133
6.5.10	Structural Material Tests.....	6-135
6.5.10.1	Concrete.....	6-135
6.5.10.2	Controlled Low-Strength Materials (CLSM).....	6-135
6.5.11	Verification of Test Results.....	6-137
6.6	GEOTECHNICAL ANALYSES	6-138
6.6.1	Analytical and Numerical Methods in Geotechnical Engineering.....	6-138
6.6.2	Seepage Analysis	6-139
6.6.2.1	Basic Assumptions, Conditions Requiring Seepage Analysis	6-139
6.6.2.2	Seepage Analysis Methods	6-142
6.6.2.2.1	Graphical (Flow Net) Approach	6-143
6.6.2.2.2	Analytical Solutions	6-144
6.6.2.2.3	Numerical Modeling Approach	6-145
6.6.2.3	Seepage Control Measures	6-146
6.6.2.3.1	Granular Drain and Filter Requirements.....	6-146
6.6.2.3.2	Geotextile-Wrapped Drains	6-149
6.6.2.3.3	Seepage Control along Conduits.....	6-156

6.6.2.3.4	Relief Wells	6-160
6.6.2.3.5	Horizontal Drains	6-161
6.6.2.3.6	Impoundment Liners	6-163
6.6.2.3.7	Foundation Seepage Cutoffs.....	6-164
6.6.2.3.8	Impoundment Water and Slurry Deposition Management	6-164
6.6.2.4	Seepage Measurements.....	6-164
6.6.3	Settlement Analysis	6-164
6.6.3.1	Conditions Requiring Deformation Analysis	6-164
6.6.3.2	Settlement and Deformation Analysis.....	6-167
6.6.3.3	Deformation Control Measures	6-170
6.6.3.4	Deformation Measurements	6-170
6.6.4	Slope Stability Analysis.....	6-171
6.6.4.1	Conditions Requiring Stability Analysis.....	6-171
6.6.4.2	Methods of Stability Analysis	6-173
6.6.4.2.1	Limit Equilibrium Stability Analysis.....	6-173
6.6.4.2.2	Stability/Deformation Analysis Using Finite Element Methods.....	6-181
6.6.4.3	Acceptable Factors of Safety	6-181
6.6.4.4	Stability Control Measures	6-184
6.6.4.5	Stability Measurements.....	6-185
6.6.5	Rock Excavations	6-185
6.6.5.1	Conditions Requiring Stability Analysis.....	6-185
6.6.5.1.1	Existing Ground Surface Slope	6-185
6.6.5.1.2	Overburden Soil Thickness, Type and Quality	6-185
6.6.5.1.3	Bedrock Surface Conditions	6-186
6.6.5.1.4	Rock Type, Quality and Configuration.....	6-187
6.6.5.1.5	Groundwater Conditions	6-189
6.6.5.1.6	Other Factors.....	6-189
6.6.5.2	Slope Stability Analysis.....	6-189
6.6.5.3	Stability Control Measures	6-191
6.6.5.4	Stability Measurements.....	6-193
6.6.6	Conduit Structural Design for Earthen Fill Loads.....	6-193
6.6.6.1	Conduit Types	6-194
6.6.6.1.1	Concrete.....	6-194
6.6.6.1.2	Thermoplastic	6-195
6.6.6.1.3	Metal	6-195
6.6.6.2	Soil-Structure Design	6-196
6.6.6.3	Conduit Installation and Design Details.....	6-201
6.6.6.3.1	Installation	6-201
6.6.6.3.2	Rigid Conduit Support.....	6-201
6.6.6.3.3	Flexible Conduit Support.....	6-202
6.6.6.3.4	Watertightness	6-204
6.6.7	Blasting Impacts.....	6-206

Chapter 7

Seismic Design: Stability and
Deformation Analyses

7.1	GENERAL	7-1
7.1.1	Design Approach.....	7-1
7.1.1.1	Seismic Instability.....	7-2
7.1.1.2	Excessive Deformations	7-3
7.1.2	Seismic Design Considerations and Flow Chart.....	7-3
7.1.3	Sand-Like Versus Clay-Like Material.....	7-9
7.1.4	Susceptibility to Strength Loss	7-11
7.1.5	Simplified Steps for Seismic Stability	7-12
7.1.5.1	Step 1	7-12
7.1.5.2	Step 2	7-12
7.1.5.3	Step 3	7-12
7.1.5.4	Step 4	7-12
7.1.5.5	Step 5	7-13
7.1.5.6	Step 6	7-13
7.2	TERMINOLOGY.....	7-14
7.3	CHARACTERIZATION OF SUBSURFACE CONDITIONS AND MATERIAL PROPERTIES.....	7-18
7.4	SEISMIC STABILITY ANALYSES.....	7-21
7.4.1	General Discussion.....	7-21
7.4.1.1	Triggering Analyses	7-21
7.4.1.2	Evaluation of Post-Earthquake Strength.....	7-22
7.4.1.3	Stability Analysis Using Post-Earthquake Strengths.....	7-23
7.4.2	Triggering Analyses	7-23
7.4.2.1	Pore-Pressure-Based Method for Triggering of Strength Loss in Clay-Like Material.....	7-23
7.4.2.2	Pore-Pressure-Based Method for Triggering of Strength Loss in Sand-Like Material.....	7-23
7.4.2.2.1	Evaluation of Cyclic Stress Ratio (<i>CSR</i>).....	7-25
7.4.2.2.2	Evaluation of Cyclic Resistance Ratio (<i>CRR</i>)	7-28
7.4.2.2.3	Correction Factors for Earthquake Magnitude, High Overburden, Sloping Ground and Age of Deposit	7-31
7.4.2.3	Strain-Based and Stress-Based Methods to Evaluate Triggering of Strength Loss	7-32
7.4.2.3.1	Clay-Like Material: Strain-Based Method for Triggering.....	7-32
7.4.2.3.2	Sand-Like Material: Strain-Based Method for Triggering	7-33
7.4.2.3.3	Sand-Like Material: Stress-Based Method for Triggering	7-35
7.4.3	Evaluation of Post-Earthquake Strength.....	7-36
7.4.3.1	Correlations of SPT and CPT with S_{us} of Sand-Like Material	7-36
7.4.3.2	Laboratory Testing for Measuring Post-Earthquake Strength for Clay-Like Material and S_{us} for Sand-Like Material.....	7-41
7.4.3.2.1	Laboratory Testing Issues	7-41
7.4.3.2.2	Laboratory Testing of Soft Clay-like Material to Measure Post-Earthquake Strength.....	7-41
7.4.3.2.3	Laboratory Testing of Sand-like Material to Measure S_{us}	7-44

7.4.3.3	Field testing to Measure S_{us} of Soft Clay-Like Material	7-51
7.4.4	Analysis Steps	7-51
7.4.4.1	Step 1 - Define Embankment Geometry	7-51
7.4.4.2	Step 2 - Screen for Potential Strength Loss	7-51
7.4.4.2.1	Sand-Like Material.....	7-51
7.4.4.2.2	Clay-Like Material	7-52
7.4.4.2.3	Screening Results	7-54
7.4.4.3	Step 3 - Define Post-Earthquake Strengths for Limit Equilibrium Stability Analyses.....	7-54
7.4.4.4	Step 4 - Perform Initial Stability Analysis.....	7-56
7.4.4.5	Optional Step 5 - Perform More Detailed Evaluation of S_{us} for Sand-Like Material	7-57
7.4.4.6	Optional Step 6 - Perform Triggering Analysis.....	7-57
7.4.5	Comments on Methods for Evaluating Triggering and Strength.....	7-58
7.5	SEISMIC DEFORMATION ANALYSES	7-59
7.5.1	General Discussion.....	7-59
7.5.2	Preliminary Screening.....	7-61
7.5.3	Pseudo-Static Procedure for Screening.....	7-61
7.5.4	Newmark-Type Analysis (No Cyclic Mobility)	7-62
7.5.5	Numerical Modeling with No Cyclic Mobility.....	7-65
7.5.6	Numerical Modeling Considering Cyclic Mobility	7-65
7.5.7	Acceptable Deformations.....	7-66
7.6	EMBANKMENT MODIFICATIONS FOR IMPROVING STABILITY OR RESISTANCE TO DEFORMATIONS	7-66
7.7	SEISMIC HAZARD ASSESSMENT (SEISMICITY).....	7-66
7.7.1	Analytical Procedures.....	7-71
7.7.1.1	Deterministic Seismic Hazard Analysis (DSHA).....	7-71
7.7.1.2	Probabilistic Seismic Hazard Analysis (PSHA).....	7-73
7.7.1.3	DSHA versus PSHA	7-74
7.7.2	Seismotectonic Modeling	7-76
7.7.2.1	Regional Tectonic Framework.....	7-77
7.7.2.2	Historical Seismicity.....	7-78
7.7.2.3	Selection of Seismic Sources	7-78
7.7.2.4	Maximum Magnitude	7-79
7.7.2.5	Earthquake Recurrence	7-81
7.7.3	Design Ground Motion.....	7-81
7.7.3.1	Selection of Design Earthquakes.....	7-82
7.7.3.2	Ground Motion Attenuation.....	7-83
7.7.3.3	Selection of Peak Ground Motion Parameters.....	7-84
7.7.3.4	Selection of Acceleration Time Histories.....	7-84
7.7.3.5	Applicability of Design Ground Motion	7-86
7.7.3.6	Application of Seismic Parameters in Design Process	7-86
7.7.3.7	Simplified Design Ground Motion for Areas of Low Seismic Hazard.....	7-86
7.8	SEISMIC DESIGN OVERVIEW.....	7-88

APPENDIX 7A DERIVATIONS OF BASIC EQUATIONS FOR STEADY-STATE LABORATORY TESTING

APPENDIX 7B VOID-RATIO MEASUREMENTS DURING UNDISTURBED TUBE SAMPLING AND LABORATORY TESTING

APPENDIX 7C PROCEDURE FOR UNDISTURBED, FIXED-PISTON SAMPLING OF COHESIONLESS SOIL

APPENDIX 7D COMBINING NEWMARK-TYPE DISPLACEMENTS COMPUTED USING 1D SITE-RESPONSE ANALYSIS

Chapter 8 Site Mining and Foundation Issues

8.1	GENERAL CONSIDERATIONS.....	8-2
8.2	Available Sources of Site Information.....	8-3
8.2.1	Mine Maps.....	8-3
8.2.2	Coal Contour Maps and Outcrops.....	8-4
8.2.3	Interpretation and Accuracy of Mine Maps.....	8-5
8.3	ON-SITE RECONNAISSANCE AND EXPLORATION.....	8-6
8.3.1	Surficial Reconnaissance.....	8-6
8.3.2	Geophysical Methods.....	8-7
8.3.3	Long-Hole Directional Drilling.....	8-7
8.3.4	Conventional Drilling and Sampling.....	8-7
8.4	EVALUATION OF MINE SUBSIDENCE AND BREAKTHROUGH.....	8-9
8.4.1	Mine Subsidence Considerations.....	8-10
8.4.2	Potential Subsidence and Failure Mechanisms.....	8-14
8.4.2.1	Sinkholes.....	8-15
8.4.2.2	Pillar Failure.....	8-18
8.4.2.3	Pillar Punching (Floor Failure).....	8-19
8.4.2.4	Outcrop Barrier Failure by Shear or Punching.....	8-20
8.4.2.5	Internal Erosion.....	8-20
8.4.2.6	Bulkhead Failure.....	8-22
8.4.2.7	Trough Subsidence and Subsidence Cracks.....	8-22
8.4.2.8	Failures Related to Auger and Highwall Mining.....	8-23
8.4.2.9	Hillside Movement or Disturbance.....	8-24
8.4.2.10	Mine Blowout.....	8-24
8.4.2.11	Seismic and Blasting Events.....	8-24
8.4.3	Mine Subsidence Potential and Analysis.....	8-25
8.4.3.1	Pillar Evaluation and Analysis.....	8-25
8.4.3.2	Subsidence Evaluation and Analysis.....	8-28
8.4.3.3	Subsidence Damage Criteria.....	8-29
8.4.4	Mine Breakthrough Potential and Analysis.....	8-30
8.4.4.1	Outcrop Barriers.....	8-30
8.4.4.2	Overburden Barriers.....	8-33
8.5	SUBSIDENCE AND BREAKTHROUGH MITIGATION METHODS.....	8-34
8.5.1	Mine Subsidence and Breakthrough Mitigation.....	8-35

8.5.1.1	Use of Safety Zones.....	8-35
8.5.1.2	Mine Backfilling.....	8-35
8.5.1.3	Stowing of Mine Openings and Associated Barrier Construction.....	8-36
8.5.1.4	Bulkhead Construction.....	8-38
8.5.1.5	Construction of Compacted Earthen Barriers on the Surface.....	8-39
8.5.1.6	Conversion to Slurry Cells.....	8-39
8.5.1.7	Sealing Sources of Leakage.....	8-40
8.5.1.8	Stabilization of Fines.....	8-40
8.5.1.9	Overexcavation and Induced Subsidence.....	8-41
8.5.1.10	Monitoring Provisions.....	8-42
8.5.2	Mine Entry Bulkhead Seal Design.....	8-42
8.5.2.1	Site Preparation.....	8-42
8.5.2.2	Bulkhead Types.....	8-43
8.5.2.3	Design Loads.....	8-47
8.5.2.4	Design of Solid Concrete Block Bulkheads.....	8-47
8.5.2.5	Design of Concrete Bulkheads.....	8-48
8.5.2.5.1	Design of Reinforced-Concrete Bulkheads for Flexure.....	8-48
8.5.2.5.2	Design of Unreinforced-Concrete Plug Bulkheads for Shear.....	8-49
8.5.2.5.3	Design of Reinforced-Concrete Bulkheads for Shear.....	8-50
8.5.2.6	Monitoring of Bulkheads.....	8-51
8.6	FOUNDATION-RELATED CONSTRUCTION AND OPERATIONS MONITORING.....	8-52
8.7	MINE BACKFILLING DESIGN.....	8-53
8.8	SURFACE MINE SPOIL ISSUES.....	8-55
8.8.1	Surface Mine Spoil Characteristics.....	8-55
8.8.2	Design and Construction Considerations.....	8-56
8.9	SURFACE MINE HIGHWALL ISSUES.....	8-59

Chapter 9

Hydrology and Hydraulics

9.1	GENERAL CONSIDERATIONS.....	9-2
9.2	HYDROLOGY AND HYDRAULICS PRINCIPLES.....	9-2
9.2.1	Basic Design Principles.....	9-5
9.2.2	Definition and Discussion of Key Runoff Elements.....	9-7
9.2.2.1	Watershed Boundary and Area.....	9-7
9.2.2.2	Precipitation.....	9-7
9.2.2.2.1	Rainfall Curves.....	9-9
9.2.2.2.2	Rainfall Intensity.....	9-9
9.2.2.3	Watershed Characteristics.....	9-10
9.2.3	Key Storage and Outflow Elements.....	9-11
9.2.3.1	Impoundment Capacity.....	9-11
9.2.3.2	Decants, Principal Spillways and Auxiliary Spillways.....	9-11
9.3	GENERAL CONSIDERATIONS FOR COAL REFUSE DISPOSAL FACILITIES.....	9-15

9.3.1	Special Characteristics	9-15
9.3.2	Site Conditions	9-15
9.3.2.1	Topography.....	9-16
9.3.2.1.1	Steep Terrain.....	9-16
9.3.2.1.2	Gently Sloping Terrain.....	9-16
9.3.2.1.3	Effects of Slope on Facility Staging	9-17
9.3.2.2	Weather and Climate.....	9-19
9.3.2.3	Geology.....	9-19
9.3.3	Construction Materials	9-20
9.4	DESIGN CONSIDERATIONS FOR DISPOSAL FACILITY EMBANKMENT TYPES	9-20
9.4.1	Non-Impounding Embankments	9-20
9.4.1.1	Valley-Fill Embankments.....	9-21
9.4.1.2	Side-Hill, Ridge and Heaped Embankments.....	9-22
9.4.2	Slurry Cell Embankments	9-22
9.4.3	Slurry Impoundments.....	9-24
9.4.3.1	Cross-Valley Impoundment	9-25
9.4.3.2	Diked Impoundment.....	9-26
9.4.3.3	Incised Impoundment	9-26
9.4.4	Other Impounding Structures	9-26
9.4.4.1	Sedimentation and Treatment Ponds	9-28
9.4.4.2	Fresh Water Impoundments	9-29
9.5	DESIGN STORM CRITERIA	9-29
9.5.1	Design Storms for Impoundments.....	9-29
9.5.1.1	General Considerations.....	9-29
9.5.1.2	Recommended Design Storm Criteria	9-32
9.5.1.3	Size and Hazard-Potential Classification	9-32
9.5.1.3.1	Impoundment-Size Classification.....	9-33
9.5.1.3.2	Hazard-Potential Classification	9-33
9.5.1.4	Determination of Design Storm Precipitation	9-34
9.5.1.4.1	Prediction of the PMP and PMTS.....	9-34
9.5.1.4.2	Prediction of the 100-year and Lesser Design Storms.....	9-35
9.5.2	Special Considerations for Short-Term Conditions	9-36
9.5.3	Hydraulic Design Criteria for Drainage Conveyance Installations	9-37
9.6	DETERMINATION OF RUNOFF QUANTITIES	9-38
9.6.1	Basic Hydrology Parameters.....	9-38
9.6.1.1	Precipitation Intensity-Duration and Distribution.....	9-38
9.6.1.2	Unit Hydrographs and Time of Concentration.....	9-40
9.6.1.2.1	Snyder Unit Hydrograph	9-41
9.6.1.2.2	Clark Unit Hydrograph.....	9-42
9.6.1.2.3	SCS Dimensionless Unit Hydrograph	9-42
9.6.1.3	Precipitation-Runoff Relationship	9-46
9.6.1.3.1	General Rainfall Conditions	9-46

9.6.1.3.2	Thunderstorm Rainfall Conditions	9-49
9.6.1.4	Channel and Impoundment Storage Characteristics	9-52
9.6.2	Runoff Determination: Hydrograph Method.....	9-54
9.6.3	Peak Runoff Determination – Key Parameters Method	9-55
9.6.4	Runoff Determination – Rational Method.....	9-58
9.7	DESIGN OF OUTFLOW SYSTEMS	9-60
9.7.1	Basic Considerations	9-61
9.7.2	Hydraulic System Components	9-63
9.7.2.1	Inlets.....	9-63
9.7.2.2	Transport Sections	9-67
9.7.2.2.1	Open-Channel Flow.....	9-67
9.7.2.2.2	Pressure Flow	9-72
9.7.2.3	Outlets	9-81
9.7.3	Special Design Considerations	9-83
9.7.3.1	Channel Freeboard	9-83
9.7.3.2	Erosion Protection.....	9-83
9.7.3.2.1	Grass-Lined Channels.....	9-86
9.7.3.2.2	Riprap-Lined Channels.....	9-86
9.7.3.2.3	Grouted-Riprap Channels.....	9-90
9.7.3.2.4	Concrete-Lined Channels.....	9-92
9.7.3.2.5	Commercially Available Composite Erosion Control Products	9-93
9.7.3.3	Cavitation	9-93
9.7.3.4	Directional Changes in Open-Channel Flow	9-94
9.7.3.5	Directional Changes in Conduit Flow.....	9-94
9.7.3.6	Materials Selection.....	9-95
9.7.3.6.1	Open-Channel Lining Systems	9-95
9.7.3.6.2	Conduit Materials	9-95
9.7.4	Types of Hydraulic Systems.....	9-95
9.7.4.1	Decant Systems	9-96
9.7.4.1.1	Inlet.....	9-96
9.7.4.1.2	Transport Section	9-98
9.7.4.2	Overflow Spillway Systems	9-99
9.7.4.3	Diversion and Collection Ditches.....	9-110
9.7.4.4	Culverts	9-110
9.7.4.5	Natural Streams	9-110
9.8	RESERVOIR ROUTING	9-111
9.8.1	Basic Routing Methodology	9-111
9.8.2	Basic Routing Parameters.....	9-112
9.9	DAM BREACH ANALYSIS AND INUNDATION MAPPING	9-113
9.9.1	Background	9-113
9.9.2	Failure Scenarios	9-113
9.9.3	Analytical Methods	9-115

9.9.4	Input Data	9-116
9.9.4.1	Breach Parameters	9-116
9.9.4.2	Initial Conditions.....	9-118
9.9.4.3	Flow Channel Geometry and Roughness	9-118
9.9.5	Results of Analysis/Inundation Mapping.....	9-118
9.9.6	Sensitivity Analyses.....	9-119
9.9.7	Hazard Classification	9-119

Chapter 10

Environmental Considerations

10.1	STREAMS AND WETLANDS.....	10-1
10.2	AIR QUALITY	10-3
10.2.1	Dust Control	10-3
10.2.2	Combustion Control.....	10-4
10.2.3	Refuse Fire Extinguishment	10-5
10.2.3.1	Excavation and Removal.....	10-6
10.2.3.2	Surface Treatment	10-8
10.2.3.3	Water and Slurry Injection.....	10-9
10.3	WATER QUALITY	10-10
10.3.1	Erosion and Sedimentation	10-10
10.3.1.1	Prevention.....	10-10
10.3.1.2	Control.....	10-11
10.3.1.2.1	Sedimentation Ponds.....	10-11
10.3.1.2.2	Sediment Traps and Check Dams	10-12
10.3.1.2.3	Silt Fences.....	10-12
10.3.1.2.4	Erosion Control Blankets and Reinforcement Mats.....	10-12
10.3.1.2.5	Vegetation.....	10-12
10.3.2	Acid Generation and Control	10-12
10.3.2.1	Background.....	10-13
10.3.2.2	Grading, Compaction and Sealing	10-13
10.3.2.3	Amendments	10-13
10.3.2.4	Reclamation and Vegetative Cover	10-15
10.3.3	Water Quality Control	10-15
10.3.3.1	Diversion of Runoff	10-15
10.3.3.2	Treatment.....	10-15
10.3.4	Water Quality Impacts on Construction Materials	10-16
10.3.5	Hydrogeology.....	10-17
10.4	LINER SYSTEMS.....	10-19
10.4.1	Design Requirements.....	10-20
10.4.2	Stability	10-23
10.4.3	Performance Considerations.....	10-24
10.5	RECLAMATION	10-26

10.5.1	Design Considerations.....	10-26
10.5.2	Grading.....	10-27
10.5.3	Impoundment Elimination	10-28
10.5.4	Soil and Topsoil Cover.....	10-29
10.5.5	Vegetation.....	10-30

Chapter 11

Construction and Disposal Operations

11.1	OPERATIONAL PLANS AND CONSTRUCTION DOCUMENTS.....	11-1
11.1.1	Design Report.....	11-3
11.1.2	Construction Drawings.....	11-4
11.1.2.1	Title Sheet and Existing Conditions Plans.....	11-4
11.1.2.2	Initial Site Development Plans.....	11-5
11.1.2.3	Refuse Embankment Construction Plan Views.....	11-6
11.1.2.4	Cross Sections and Profiles.....	11-6
11.1.2.5	Detailed Plan Views and Cross Sections.....	11-8
11.1.2.6	Miscellaneous Details and Information	11-8
11.1.3	Technical Specifications	11-9
11.1.4	Operation and Maintenance Plan.....	11-11
11.1.5	Calculation Brief.....	11-13
11.2	PLANNING AND SCHEDULING.....	11-14
11.2.1	Planning of Coal Refuse Disposal Operations	11-14
11.2.1.1	Long-Term Planning	11-15
11.2.1.2	Short-Term Planning.....	11-16
11.2.2	Scheduling Methods and Application	11-17
11.2.2.1	Scheduling Data.....	11-17
11.2.2.2	Applicability of Scheduling Techniques.....	11-18
11.3	REFUSE TRANSPORT.....	11-19
11.3.1	Trucks and Scrapers.....	11-20
11.3.2	Conveyor Belt Systems	11-20
11.4	HANDLING EQUIPMENT.....	11-21
11.4.1	Loading and Hauling Equipment	11-21
11.4.2	Spreading Equipment.....	11-22
11.4.3	Compaction Equipment.....	11-23
11.4.4	Use of Handling Equipment for Related Activities	11-26
11.5	CONSTRUCTION AND PLACEMENT OF EMBANKMENT MATERIALS.....	11-26
11.5.1	Embankment Fill.....	11-26
11.5.2	Upstream Construction Implementation Procedure.....	11-33
11.5.3	Excess Coarse Refuse/Inclement Weather Disposal.....	11-35
11.5.4	Disposal of Fine Refuse Slurry.....	11-36
11.5.5	Disposal of Combined Refuse.....	11-38
11.5.6	Use of Amendments.....	11-38

11.6	RELATED ACTIVITIES.....	11-38
11.6.1	Haul and Access Road Construction and Maintenance.....	11-39
11.6.2	Liner Systems	11-39
11.6.3	Embankment Foundation Preparation.....	11-40
11.6.3.1	Clearing and Topsoil Stockpiling	11-40
11.6.3.2	Soft Soil Foundations	11-40
11.6.3.3	Competent Soil Foundations	11-40
11.6.3.4	Rock Foundations.....	11-40
11.6.3.5	Mine Spoil.....	11-41
11.6.4	Water Control.....	11-41
11.6.5	General Excavation	11-43
11.6.6	Embankment Fill Constructed from On-Site Borrow Materials	11-43
11.6.6.1	Clayey and Silty Borrow Materials	11-43
11.6.6.2	Rock and Granular Borrow Materials	11-44
11.6.6.3	Use of Mine Spoil	11-45
11.7	FACILITY APPURTENANT STRUCTURES.....	11-46
11.7.1	Material Requirements	11-46
11.7.2	Filters and Drains	11-46
11.7.2.1	Granular and Geotextile Filters.....	11-50
11.7.2.2	Granular Underdrains.....	11-51
11.7.2.3	Drainage Pipe.....	11-53
11.7.3	Culverts and Decants	11-53
11.7.4	Concrete Structures.....	11-54
11.7.5	Gates, Valves, Pipelines and Other Metal Work.....	11-55
11.7.6	Support Structures.....	11-55
11.7.7	Mine-Opening and Auger-Hole Seals and Drains.....	11-56
11.8	QUALITY CONTROL AND FIELD TESTING.....	11-56
11.8.1	Compaction Control.....	11-56
11.8.2	Material Testing.....	11-58

Chapter 12

Monitoring, Inspections and Facility Maintenance

12.1	MONITORING AND INSPECTIONS.....	12-2
12.1.1	Monitoring and Inspection Objectives.....	12-3
12.1.2	Visual Observations	12-4
12.1.2.1	Schedule and Checklist for Visual (and Other) Observations	12-7
12.1.2.2	Facility Development	12-8
12.1.2.2.1	Site Preparation.....	12-8
12.1.2.2.2	Starter Embankment and Internal Drains.....	12-8
12.1.2.2.3	Decant Pipes.....	12-12
12.1.2.2.4	Channel Construction	12-12

12.1.2.2.5	Instrumentation	12-12
12.1.2.2.6	Reclamation.....	12-12
12.1.2.3	Adjoining Area Conditions.....	12-13
12.1.2.3.1	Sloughing or Sliding.....	12-13
12.1.2.3.2	Signs of Subsidence.....	12-13
12.1.2.3.3	Evidence of Erosion.....	12-13
12.1.2.3.4	Springs or Seepage Areas.....	12-13
12.1.2.3.5	Changes in Vegetation.....	12-14
12.1.2.4	Other Development Work	12-14
12.1.2.4.1	Upstream Development.....	12-14

Instrumentation and Performance Monitoring

13.1	INSTRUMENTATION PROGRAM PLANNING	13-1
13.2	MEASUREMENT TECHNIQUES	13-2

13.2.1	Movements and Displacements	13-3
13.2.1.1	General Observations	13-3
13.2.1.2	Movement Measurement Techniques	13-8
13.2.1.2.1	Surveying Methods.....	13-8
13.2.1.2.2	Surface Extensometers	13-16
13.2.1.2.3	Tiltmeters.....	13-16
13.2.1.2.4	Probe Extensometers	13-18
13.2.1.2.5	Fixed Embankment Extensometers	13-19
13.2.1.2.6	Fixed Borehole Extensometers	13-20
13.2.1.2.7	Inclinometers	13-21
13.2.2	Piezometric Levels and Pore-Water Pressures.....	13-23
13.2.2.1	Piezometer Types.....	13-23
13.2.2.2	Observation Wells.....	13-24
13.2.2.3	Open-Standpipe Piezometers.....	13-25
13.2.2.4	Closed-System Piezometers	13-29
13.2.3	Surface Water Flows and Hydrologic Parameters	13-31
13.2.3.1	Measurement of Impoundment Water Level	13-31
13.2.3.2	Measurement of Seepage Flows and Other Surface Water Flows	13-32
13.2.3.2.1	Importance of Seepage Flows	13-32
13.2.3.2.2	Measurement of Seepage Flow Rates.....	13-34
13.2.3.3	Measurement of Rainfall and Snowfall.....	13-36
13.2.3.4	Observation of Temperature and General Weather Conditions	13-36
13.2.4	Miscellaneous Instrumentation and Monitoring.....	13-36
13.2.4.1	Measurement of Soil Pressure.....	13-36
13.2.4.2	Measurement of Blast Vibrations	13-39
13.2.4.3	Measurement of Temperature	13-41
13.3	INSTRUMENTATION MAINTENANCE.....	13-41
13.3.1	Importance of Maintenance and Recalibration.....	13-41
13.3.2	Recalibration and Maintenance during Service Life	13-42
13.4	AUTOMATED DATA ACQUISITION.....	13-42
13.5	INSTRUMENTATION COSTS.....	13-42

APPENDIX 13A MEASUREMENTS, TRANSDUCERS AND DATA-ACQUISITION SYSTEMS

Chapter 14

Emergency Action Planning

14.1	PURPOSE	14-1
14.2	EMERGENCY ACTION PLAN PREPARATION.....	14-1
14.2.1	Background	14-1
14.2.2	Federal Guidelines for Dam Safety	14-3
14.2.3	Basic Elements of an EAP	14-3
14.2.4	Dam Inspection and Inundation Area Reconnaissance	14-4
14.2.4.1	Dam Inspection.....	14-4

14.2.4.2	Downstream Channel Reconnaissance	14-5
14.2.4.3	Physical Description	14-5
14.2.5	Inundation Map Preparation	14-5
14.2.5.1	Causes of Dam Failures	14-5
14.2.5.2	Dam Breach Analysis	14-6
14.2.5.3	Inundation Map	14-6
14.2.6	Participant Responsibilities.....	14-6
14.2.7	Implementation Triggers and Emergency Responses	14-7
14.2.8	Notification Requirements.....	14-9
14.2.9	EAP Public Copies.....	14-9
14.2.10	Exercises/Training	14-9
14.2.11	Plan Maintenance	14-10
14.2.12	EAP Appendices	14-11
14.3	PREPARATION FOR POTENTIAL EMERGENCY REMEDIAL ACTIONS.....	14-11
14.3.1	Potential Overtopping During a Storm	14-12
14.3.2	Movement or Sliding of the Embankment.....	14-12
14.3.3	Internal Erosion or Piping through the Dam, Foundation or Abutments	14-12
14.3.4	Excessive Seepage and a High Level of Saturation in the Embankment	14-13
14.3.5	Spillway Failure or Erosion that Could Cause a Dam Breach.....	14-13
14.3.6	Excessive Settlement or Subsidence of the Embankment	14-13
14.3.7	Formation of a Sinkhole on the Crest or Face of the Dam	14-14
14.3.8	Earthquake.....	14-14

9.7	Channel Construction in Moderately and Steeply Sloping Terrain	9-17
9.8	Channel Construction in Gently Sloping Terrain	9-18
9.9	Drainage Control for Valley-Fill, Non-Impounding Embankment	9-21
9.10	Drainage Control for Side-Hill and Heaped Embankments	9-23
9.11	Drainage Control for Slurry-Cell Facility	9-25
9.12	Drainage Control for Cross-Valley Impoundment	9-27
9.13	Drainage Control for Diked Impoundment	9-28

FIGURE NO.	TITLE	PAGE NO.
9.14	U.S. Regions Covered by Generalized PMP Studies	9-35
9.15	Dimensionless Design Storm Distribution	9-40
9.16	Average Velocities for Estimating Travel Time for Shallow, Concentrated Flow	9-45
9.17	Direct Runoff for Rainfall Less than or Equal to 8 Inches	9-47
9.18	Direct Runoff for Rainfall Greater than or Equal to 8 Inches	9-48
9.19	Estimated Total Runoff Volume for CN = 70	9-56
9.20	Estimated Total Runoff Volume for CN = 80	9-57
9.21	Estimated Peak Runoff Rate for 6-Hour Design Storm and CN = 70	9-58
9.22	Estimated Peak Runoff Rate for 6-Hour Design Storm and CN = 80	9-59
9.23	Example of Rational Method of Inflow Calculation	9-62
9.24	Typical Head-Discharge Curves for Hydraulic Systems	9-64
9.25	Spillway Approach Channels	9-65
9.26	Drop-Inlet Decant Systems	9-66
9.27	Open-Channel Cross Sections	9-68
9.28	Channel Flow Conditions	9-70
9.29	Critical Depth for Trapezoidal and Circular Sections	9-71
9.30	Closed-Conduit Hydraulic Systems	9-73
9.31	Typical Flow Conditions – Culvert Conduits on Mild Slopes	9-74
9.32	Typical Flow Conditions – Culvert Conduits on Steep Slopes	9-75
9.33	Culvert Inlet Configurations	9-78
9.34	Flow and Discharge Characteristics of Decant-Inlet, Closed-Conduit System	9-80
9.35	Examples of Channel and Conduit Outlets	9-82
9.36	Manning's n Versus VR for Various Retardance Classes	9-88
9.37	Grouted Riprap Lining Thickness as a Function of Flow Velocity	9-91
9.38	Examples of Decants	9-100
9.39	Example Decant System at Diked Impoundment	9-101
9.40	Example Decant System at Cross-Valley Impoundment	9-102
9.41	Example Spillway System – A	9-104
9.42	Example Spillway System – B	9-105
9.43	Example Spillway System – C	9-106
9.44	Spillway Inlet Control	9-107
9.45	Spillway Outlet Control	9-108

FIGURE NO.	TITLE	PAGE NO.
9.46	Sectional View Through Impounding Facility	9-112
9.47	Breach Parameters	9-117
10.1	Liner Systems Used at Coal Refuse Disposal Facilities	10-23
11.1	Compaction by Hauling Units Using Successive Offset Passes	11-25
11.2	Procedures for Controlled Placement of Refuse	11-27
11.3	Benching of Embankment Fill Into Natural Slope	11-33
11.4	Slurry Disposal	11-37
11.5	Stockpiling and Handling of Granular Materials	11-52
12.1	Failure Modes, Warning Signs and Surveillance Measures	12-5
12.2	Example Data Collection Form	12-6
13.1	Location of Monuments Using Triangulation	13-14
13.2	Example of Benchmark in Rock	13-15
13.3	Typical Monument Installations	13-17
13.4	Probe Extensometer	13-19
13.5	Settlement Platform	13-20
13.6	Fixed Borehole Extensometer	13-21
13.7	Inclinometer Operation	13-22
13.8	Approximate Response Time for Various Types of Piezometers	13-25
13.9	Open-Standpipe Piezometer/Observation Well	13-27
13.10	Normally-Closed Pneumatic Piezometer	13-30
13.11	Vibrating-Wire Piezometer	13-31
13.12	Bonded Electrical-Resistance Piezometer	13-33
13.13	Measurement of Flow from Pipes	13-37
13.14	Typical V-Notch Weir	13-38
13.15	Flow Depth-Discharge Relationship for 90-Degree, V-Notch Weir	13-40
13.16	Automated Data Acquisition System at Coal Refuse Disposal Facility	13-43
14.1	Inundation Map for Coal Refuse Impoundment	14-7

Acronyms

ACRONYM	REPRESENTS
AASHTO	American Association of State Highway and Transportation Officials
ABS	Acrylonitrile-Butadiene-Styrene
ACI	American Concrete Institute
AC	alternating current
ALD	anoxic limestone drain
AMC	antecedent moisture condition
AMD	acid mine drainage
AMRL	AASHTO Materials Reference Laboratory
AOS	apparent opening size
ArcGIS	GIS software developed by Environmental Systems Research Institute (ESRI)
ARMPS	Analysis of Retreat Mining Pillar Stability (software)
ARMPS-HWM	ARMPS program for highwall mine pillars (software)
ASCE	American Society of Civil Engineers
ASTM	American Society for Testing and Materials
AWWA	American Water Works Association
BOD	biochemical oxygen demand
BREACH	breach parameter computation software
CADD	computer-aided design and drafting
CANDE	Culvert Analysis and Design (software)
CD	consolidated drained
CGS	Canadian Geotechnical Society
CIDC	consolidated isotropic drained compression
CISPM	Comprehensive and Integrated Subsidence Prediction Model (software)
CIUC	consolidated isotropic undrained compression
CLSM	controlled low-strength material
CMP	corrugated metal pipe
CMRR	Coal Mine Roof Rating (software)

ACRONYM	REPRESENTS
CN	curve number
CO	carbon monoxide
COSMOS	Consortium of Organizations for Strong-Motion Observation Systems
COV	coefficient of variability
CPE	chlorinated polyethylene
CPM	Critical Path Method (software)
CPP	corrugated plastic pipe
CPT	cone penetrometer test
CPTu	piezocone penetrometer test
CRR	cyclic resistance ratio
CFR	Code of Federal Regulations
CSI	Construction Specifications Institute
CSPE	chlorosulfonated polyethylene
CSR	cyclic stress ratio
CU	consolidated undrained
\overline{CU}	consolidated undrained with pore pressure measurements
CWA	Clean Water Act
DAMBRK	Dam Break (software)
DC	direct current
DCDT	direct current differential transformer
DEM	digital elevation model
DEP	Department of Environmental Protection (state environmental agencies)
DI	degradation index
DMLR	Virginia Department of Mines, Minerals, and Energy, Division of Mined Land Reclamation
DOD	Department of Defense
DOQ	digital orthophoto quadrangle
DOQQ	digital orthophoto quarter quadrangle
DRG	digital raster grid
DSHA	deterministic seismic hazard analysis
DWOPER	Dynamic Wave Routing Model (software)
EAP	Emergency Action Plan
EDM	electronic distance measuring

ACRONYM	REPRESENTS
EEGS	Environmental and Engineering Geophysical Society
EERT	Eastern Energy Resources Team
EM	electromagnetic method
EMA	Emergency Management Agency
EMC	Emergency Management Coordinator
EMS	Emergency Medical Service
EPA	U.S. Environmental Protection Agency
EPRI	Electric Power Research Institute
EROS	Earth Resources Observation and Science
ESRI	Environmental Systems Research Institute
FBC	fluidized bed combustion
FE	finite element
FEMA	Federal Emergency Management Agency
FERC	Federal Energy Regulatory Commission
FGD	flue gas desulfurization
FHWA	Federal Highway Administration
FLAC	Fast Lagrangian Analysis of Continua (software)
FLDWAV	Flood Wave (software)
FLUSH	seismic soil-structure interaction software
FR	friction ratio
FS	factor of safety
FVST	field vane shear test
GAI-LAP	Geosynthetic Accreditation Institute - Laboratory Accreditation Program
GCL	geosynthetic clay liner
GEI	Geotechnical Engineers, Inc.
GIS	geographic information system
GPR	ground penetrating radar
GPS	global positioning system
GRM	generalized reciprocal method
HDPE	high-density polyethylene
HEC	USACE Hydrologic Engineering Center
HEC-1	open channel flow analysis software
HEC-GeoHMS	GIS -based version of HEC-HMS software

ACRONYM	REPRESENTS
HEC-HMS	Hydraulic Engineering Center Hydrologic Modeling System (software)
HEC-RAS	Hydraulic Engineering Center River Analysis System (software)
HMR	Hydrometeorological Report
HSG	hydrologic soil group
ICODS	Interagency Committee on Dam Safety
IDF	inflow design flood
LAMODEL	software for computing stresses and displacements in mines
LI	liquidity index
LIDAR	light detection and ranging
LL	liquid limit
LLNL	Lawrence Livermore National Laboratory
LVDT	linear variable differential transformer
MAE	Mid-America Earthquake
MARV	minimum average roll value
MCE	maximum credible earthquake
MDE	maximum design earthquake
MIBC	methylisobutyl carbinol
MMI	Modified Mercalli Intensity
MPBX	multiple-point borehole extensometer
MSF	magnitude scaling factor
MSHA	Mine Safety and Health Administration
NAS	National Academy of Sciences
NASA	National Aeronautics and Space Administration
NCB	National Coal Board (Britain)
NEH	National Engineering Handbook
NEHRP	National Earthquake Hazard Reduction Program
NIOSH	National Institute for Occupational Safety and Health
NMO	normal moveout
NMSZ	New Madrid Seismic Zone
NOAA	National Oceanic and Atmospheric Administration
NR	not reported
NRC	National Research Council
NRCS	Natural Resources Conservation Service
NSF	National Science Foundation

ACRONYM	REPRESENTS
NSSGA	National Stone, Sand and Gravel Association
NWS	National Weather Service
OBE	operating basis earthquake
OLC	open limestone channel
OSHA	Occupational Safety and Health Administration
OSM	Office of Surface Mining
PCCP	prestressed concrete cylinder pipe
PCPT	piezocone penetrometer test
PE	polyethylene
PERT	scheduling software
PGA	peak ground acceleration
PI	plastic index
PL	plastic limit
PMF	Probable Maximum Flood
PMP	Probable Maximum Precipitation
PMTS	Probable Maximum Thunderstorm
POA	percent open area
PSHA	probabilistic seismic hazard analysis
PV	prefabricated vertical
PVC	polyvinyl chloride
Q	equivalent to UU
QA	quality assurance
QC	quality control
QUAD4	software for finite element seismic analysis of earth structures
R	equivalent to \overline{CU}
RCCP	reinforced concrete cylinder pipe
RCP	reinforced concrete pipe
RMR	rock mass rating
RQD	rock quality designation
RVSP	reverse vertical seismic profile
S	equivalent to CD
SAGEEP	Symposium on the Application of Geophysics to Engineering and Environmental Problems

ACRONYM	REPRESENTS
SAPS	successive alkalinity producing system
SCPTu	seismic piezocone penetrometer test
SCS	Soil Conservation Service (now NRCS)
SDI	slake durability index
SDPS	Surface Deformation Prediction System (software)
SEE	safety evaluation earthquake
SF	safety factor (for channel linings)
SHAKE	software for seismic analysis of subsurface layers
SHANSEP	stress history and normalized soil engineering parameters
SL	shrinkage limit
SMCRA	Surface Mining and Reclamation Act
SMPDBK	Simplified Dam Break (software)
SP	spontaneous or self potential
SPBX	single-point borehole extensometer
SPECTEXT	specification software
SPT	standard penetration test
SSE	safe shutdown earthquake
SSHAC	Senior Seismic Hazard Analysis Committee
TDEM	time-domain electromagnetic method
TDR	time-domain reflectometry
TR	technical release
USACE	U.S. Army Corps of Engineers
USBM	U.S. Bureau of Mines
USBR	U.S. Bureau of Reclamation
USCS	Unified Soil Classification System
USDA	U.S. Department of Agriculture
USDOE	U.S. Department of Energy
USEPA	U.S. Environmental Protection Agency
USGS	U.S. Geological Survey
USNRC	U.S. Nuclear Regulatory Commission
UU	unconsolidated undrained
VLDPE	very low density polyethylene
VLF	very low frequency

ACRONYM	REPRESENTS
VST	vane shear test
VSP	vertical seismic profile
WMS	Watershed Modeling System (software)
WP	wetted perimeter
WVDOT	West Virginia Department of Transportation
