## Foreword

The National Standard Reference Data System provides access to the quantitative data of physical science, critically evaluated and compiled for convenience and readily accessible through a variety of distribution channels. The System was established in 1963 by action of the President's Office of Science and Technology and the Federal Council for Science and Technology, and responsibility to administer it was assigned to the National Bureau of Standards.

NSRDS receives advice and planning assistance from a Review Committee of the National Research Council of the National Academy of Sciences-National Academy of Engineering. A number of Advisory Panels, each concerned with a single technical area, meet regularly to examine major portions of the program, assign relative priorities, and identify specific key problems in need of further attention. For selected specific topics, the Advisory Panels sponsor subpanels which make detailed studies of users' needs, the present state of knowledge, and existing data resources as a basis for recommending one or more data compilation activities. This assembly of advisory services contributes greatly to the guidance of NSRDS activities.

The System now includes a complex of data centers and other activities in academic institutions and other laboratories. Components of the NSRDS produce compilations of critically evaluated data, reviews of the state of quantitative knowledge in specialized areas, and computations of useful functions derived from standard reference data. The centers and projects also establish criteria for evaluation and compilation of data and recommend improvements in experimental techniques. They are normally associated with research in the relevant field.

The technical scope of NSRDS is indicated by the categories of projects active or being planned: nuclear properties, atomic and molecular properties, solid state properties, thermodynamic and transport properties, chemical kinetics, and colloid and surface properties.

Reliable data on the properties of matter and materials are a major foundation of scientific and technical progress. Such important activities as basic scientific research, industrial quality control, development of new materials for building and other technologies, measuring and correcting environmental pollution depend on quality reference data. In NSRDS, the Bureau's responsibility to support American science, industry, and commerce is vitally fulfilled.

ERNEST AMBLER, *Director*

## Preface

This report is one of a series of data publications on radiation chemistry; the aim of the series is to compile, evaluate, and present the numerical results on processes occurring in systems which have been subjected to ionizing radiation. Various kinds of data are important in radiation chemistry. The quantities which were measured first were the observed radiation yields or  $G$  values (molecules formed or destroyed per 100 eV). Various indirect methods based on  $G$  values have been used to determine yields of transient species and relative rates of reactions. The spectral properties (optical, electron spin resonance) of transients have provided a direct method for their identification, and rates of the very fast reactions of transients which occur in irradiated systems have been measured directly by spectroscopic methods. Conductivity and luminescence methods have also provided a means of measuring properties of transients and their kinetics. Some reactions which occur in irradiated systems have also been studied by other methods, such as photochemistry, electric discharge, ultrasonics, chemical initiation, electron impact, etc. The emphasis in these publications is on the data of radiation chemistry, but where other pertinent data exist, they are included.

The data of radiation chemistry are voluminous; thousands of systems have been investigated. As a result there are certain collections, *e.g.* rate constants of particular types of reactions or certain properties of transients, for which tabulations of the data are considered essential, but for which critical assessment of each value is impossible. On the other hand, certain systems and properties have been studied so extensively that critical examination of these data is desirable and timely. Authors of this series of data publications have been asked to evaluate the extent to which the data can be critically assessed, to describe their criteria for evaluation, and to designate preferred values whenever possible.

# Rate Constants for Reactions of Inorganic Radicals in Aqueous Solution

Alberta B. Ross and Pedatsur Neta

Radiation Chemistry Data Center, Radiation Laboratory\*,  
University of Notre Dame, Notre Dame, IN 46556

Rate constants have been compiled for reactions of various transient inorganic radicals produced by radiolysis or photolysis in aqueous solution. Data are included for the carbonate radical, sulfate radical, phosphate radical, nitrate radical and other nitrogen-, sulfur- and selenium-containing radicals, and the halide and pseudohalide radicals  $\text{Cl}_2^-$ ,  $\text{Br}_2^-$ ,  $\text{I}_2^-$  and  $(\text{SCN})_2^-$ . The radicals react with other inorganic ions, as well as aliphatic, aromatic and heterocyclic compounds.

Keywords: Aqueous solution; carbonate radical; chemical kinetics; halogen radical anions; nitrate radical; oxyanion radicals; phosphate radical; photolysis; radiolysis; rates; selenium radicals; sulfate radical; thiocyanate radical anion.

## Introduction

The radiolysis of water produces short-lived intermediates, hydrated electrons, hydrogen atoms and hydroxyl radicals, which react rapidly with solutes in the water to form other short-lived reaction intermediates (73-0030, 75-0001, 75-0002, 77-0011)<sup>1</sup>. This compilation includes reaction rates for short-lived species derived from a number of inorganic ions, including carbonate, sulfate, sulfite, phosphate, nitrate, thiocyanate, and the halide ions by radiolysis or photolysis. The radicals react by oxidizing a wide variety of solutes in aqueous media, most commonly by electron transfer, but also by hydrogen abstraction, addition, substitution, and disproportionation.

## Methods

*Carbonate radical.* The  $\text{CO}_3^-$  radical is produced by oxidation of carbonate or bicarbonate ions with OH or  $\text{SO}_4^-$  radicals,

by photoionization of carbonate

or by photolysis of certain carbonato-metal complexes, e.g.

The  $\text{CO}_3^-$  radical has a broad optical absorption with  $\lambda_{\text{max}}$  600 nm and  $\epsilon_{\text{max}}$  1880  $M^{-1} \text{cm}^{-1}$  (66-0001). The protonation

was suggested to have  $pK_a$  9.6 (73-7109), but it does not result in shifts in the optical (73-7109) or ESR spectra (75-5244).

\*The Radiation Laboratory is operated under Contract EY-76-C-02-0038 with the Department of Energy. The Radiation Chemistry Data Center is supported jointly by the National Bureau of Standards, Office of Standard Reference Data and the Department of Energy. This is Radiation Laboratory Document No. NDRL-1933.

<sup>1</sup>Literature references are cited following the tables.

The majority of the rate constants for reactions of  $\text{CO}_3^-$  or  $\text{CO}_3\text{H}$  were determined by following the decay of these radicals through their optical absorption. The carbonate radical can oxidize certain aromatic and heterocyclic compounds and inorganic ions, probably by direct electron transfer. It can also abstract hydrogen from aliphatic compounds, but this reaction is generally slow. Intermediate or stable products from  $\text{CO}_3^-$  reactions were identified in only a limited number of cases and the mechanisms are mostly speculative.

*Sulfate radical.* The  $\text{SO}_4^-$  radical is produced from peroxodisulfate ions by reaction with  $e_{\text{aq}}^-$

Reaction with various other radicals and metal ions can also yield  $\text{SO}_4^-$ . The other most commonly used method for production of this radical is photolysis of  $\text{S}_2\text{O}_8^{2-}$

Oxidation of sulfate ions to yield  $\text{SO}_4^-$  radicals can be also carried out photolytically or radiolytically, but those processes are relatively inefficient and were not used frequently for obtaining rate constants.

The  $\text{SO}_4^-$  radical has an optical absorption at  $\lambda_{\text{max}}$  450 nm and  $\epsilon_{\text{max}}$  1100  $M^{-1} \text{cm}^{-1}$  (66-0019, 69-0158). This radical may protonate in strongly acidic solutions (67-7274) but no  $\text{p}K_a$  value has been determined. The rate constants for reactions of  $\text{SO}_4^-$  were determined in most cases by following the decay of the 450 nm absorption. In some cases, the kinetics of formation of the product radicals was monitored.

This radical is a strong oxidant which can react with many organic and inorganic compounds by direct electron transfer oxidation. The reaction with benzene and most aromatic and heterocyclic compounds involves this mechanism. However, addition to aliphatic double bonds and abstraction from saturated compounds were also shown to take place. The products and mechanism of reaction of this radical were studied in some detail, many of which are summarized under the corresponding reactions in table 2.

*Phosphate radical.* The  $\text{PO}_4^{2-}$  radical and its protonated forms are produced from peroxodiphosphate or phosphate ions by the same methods as described for  $\text{SO}_4^-$ . The acid-base forms and their optical absorption properties can be summarized as follows (78-1075):

|                         | $\text{H}_2\text{PO}_4$ | $\text{HPO}_4^-$ | $\text{PO}_4^{2-}$ |                         |
|-------------------------|-------------------------|------------------|--------------------|-------------------------|
| $\text{p}K_a$           | 5.7                     | 8.9              |                    |                         |
| $\lambda_{\text{max}}$  | 520                     | 510              | 530                | nm                      |
| $\epsilon_{\text{max}}$ | 1850                    | 1550             | 2150               | $M^{-1} \text{cm}^{-1}$ |

The rate constants for reactions of these radicals were determined in most cases by following the decay of their broad absorption in the 500-540 nm region. These radicals can abstract hydrogen from saturated organic compounds, add to olefins, and oxidize many aromatic compounds.  $\text{H}_2\text{PO}_4$  is somewhat similar to  $\text{SO}_4^-$  in its reactivity, but  $\text{HPO}_4^-$  and  $\text{PO}_4^{2-}$  are less reactive, both in H abstraction reactions and in electron transfer oxidations. *Other sulfur-, nitrogen- and selenium radicals.* Various radicals have been produced from sulfite, selenite, nitrite, nitrate, and related anions, by one-electron oxidation or reduction, carried out either radiolytically or photolytically. Some of the details for the production and observation of these radicals are given in tables 3 and 4. Representative examples are:

Only a few rate constants have been reported for these various radicals, most of them are for the radical-radical reaction. The reactions of these radicals with organic and inorganic compounds were studied in only a very limited number of cases so that the rates and mechanisms are largely unknown.

*Halide and pseudohalide radicals.* Radicals of the type  $X_2^-$  can be produced from halides and some pseudohalides. Tables 6 – 9 list the rates for  $Cl_2^-$ ,  $Br_2^-$ ,  $I_2^-$  and  $(SCN)_2^-$ , respectively. The radicals are produced by oxidation of the halide ion followed by the complex formation. Oxidation of  $X^-$  can be achieved in most cases by reaction with OH

although complex and acid-base equilibria are involved, which cause the  $Cl^-$  reaction to be efficient only in acid solution (73–1039). Oxidation of  $Cl^-$  in neutral and alkaline solutions can be carried out by  $SO_4^-$  (e.g. 75–5244).

Photolysis of halides can also result in their oxidation.

The  $X_2^-$  radicals are formed in the equilibrium

which is shifted predominantly to the right ( $K \cong 10^5 M^{-1}$ ) (65–0383, 68–0375, 73–1039). Their reaction kinetics are conveniently studied by observing their intense absorptions near 340 for  $Cl_2^-$ , 360 for  $Br_2^-$ , 380 for  $I_2^-$  and 480 for  $(SCN)_2^-$ , all of the radicals having  $\epsilon$  of the order of  $10^4 M^{-1} cm^{-1}$ .

The reactivities of the  $X_2^-$  radicals generally decrease in this order:  $Cl_2^-$ ,  $Br_2^-$ ,  $(SCN)_2^-$ ,  $I_2^-$ .  $Cl_2^-$  can abstract hydrogen from aliphatic compounds but the equivalent reactions of the other  $X_2^-$  radicals are barely detectible in the pulse experiments. The reaction of  $Cl_2^-$  with some unsaturated compounds produces Cl adducts, and presumably the other  $X_2^-$  radicals may react in a similar fashion, although little information is available on them. The main reaction of the  $X_2^-$  radicals is the one-electron oxidation, which takes place with many aromatic and heterocyclic compounds and with certain inorganic ions. However,  $X_2^-$  radicals are weaker oxidants than  $SO_4^-$  and  $H_2PO_4^-$ . The latter can oxidize benzene and most of its derivatives, while  $X_2^-$  can only oxidize phenols, anilines, and anisoles.

### Arrangement of the Tables

Entries in each table have been numbered in order to provide for the assembly of an index. Within the tables reactions of the transient with the same or other transient species are listed first. Next are reactions of inorganic solutes which have been ordered alphabetically by main element; the organic reactants follow in alphabetical order by name. The reaction is given whenever evidence for the nature of the products is available; otherwise, only the reactants are given in column 2.

*Rate Constants (k):* Most of the second order rate constants are derived from pseudo-first order rates for the decay of the transient or the build-up of a product. The error limits given are those reported in the original papers; lacking such a statement the uncertainty in the rate constant should be assumed to be  $\pm 25\%$ . Second order rates for reaction of two radicals have usually been derived from measurements of  $2k/\epsilon$ ; the value of  $\epsilon$  used to calculate  $2k$  has been listed in the *Comments* column. Possibilities for error in the determination of  $\epsilon$  increase the error limits for  $2k$ , which should be assumed to be  $\pm 50\%$ , lacking a specific error statement.

In some cases the rates are designated (rel.) and have been calculated with reference to the rate of a competing reaction, given in the *Comments* column. Ratios of rates are listed for a few reactions in the form  $k/k_x$  in which  $k_x$  is the rate of reaction of the transient with competing solute, X.

*Ionic Strength (I):* The ionic strength has been quoted from the original paper or calculated from the given solute concentrations, if that information was available. When the reported rate constants were corrected for ionic strength the designation  $\rightarrow 0$  is used.

*Comments:* The source of the transient and method of measurement are included in this column, along with other information on product identification, or related values for equilibrium constants,  $pK$ , or isotope effects. Temperature is assumed to be room temperature unless otherwise specified.

*References:* The references are designated by the serial number of the paper assigned by the Radiation Chemistry Data Center; the first two digits of the number represent the year in which the work was published.

## Formula Index

- $\text{AsO}_2^-$  Arsenite ion, 2.2  
 $\text{Br}$  Bromine atom, 7.2  
 $\text{Br}^-$  Bromide ion, 1.2a, 2.3, 5.4–5.5  
 $\text{BrCoH}_{15}\text{N}_5^{2+}$  Bromopentaamminecobalt(III) ion, 1.7e  
 $\text{BrO}^-$  Hypobromite ion, 1.3, 7.5  
 $\text{BrO}_2^-$  Bromite ion, 1.4, 7.6  
 $\text{BrO}_3^-$  Bromate ion, 7.7  
 $\text{Br}_2^-$  Bromine molecule anion, table 7  
 $\text{CCl}_4$  Carbon tetrachloride, 1.36  
 $\text{CCoH}_{12}\text{N}_4\text{O}_3^+$  Carbonatopentaamminecobalt(III) ion, 1.6  
 $\text{CHO}_2^-$  Formate ion, 1.51, 2.67, 5.51, 6.63, 7.43, 9.18  
 $\text{CHO}_3^-$  Bicarbonate ion, 2.4  
 $\text{CH}_2\text{NO}_2^-$  *aci*-Nitromethane, 1.77  
 $\text{CH}_2\text{O}_2$  Formic acid, 2.68, 4.12, 6.64  
 $\text{CH}_3\text{NO}_2$  Nitromethane, 1.76  
 $\text{CH}_4\text{N}_2\text{O}$  Urea, 1.100  
 $\text{CH}_4\text{O}$  Methanol, 1.69, 2.78, 4.14, 5.62, 6.77  
 $\text{CN}^-$  Cyanide ion, 2.5  
 $\text{CNO}^-$  Cyanate ion, 2.6  
 $\text{CNS}^-$  Thiocyanate ion, 1.13d, 2.7, 6.3, 7.24  
 $\text{CO}_3^-$  Carbonate radical ion, table 1  
 $\text{C}_2\text{Cl}_3\text{O}_2^-$  Trichloroacetate ion, 1.91  
 $\text{C}_2\text{H}_2\text{ClO}_2^-$  Chloroacetate ion, 1.37  
 $\text{C}_2\text{H}_3\text{N}$  Acetonitrile, 1.18  
 $\text{C}_2\text{H}_3\text{O}_2^-$  Acetate ion, 1.16, 2.32, 5.31  
 $\text{C}_2\text{H}_4\text{O}_2$  Acetic acid, 2.33, 4.8, 5.32, 6.32  
 $\text{C}_2\text{H}_5\text{NO}_2$  Glycine, 1.55, 2.70, 5.54, 6.68  
 $\text{C}_2\text{H}_6\text{O}$  Ethanol, 1.49, 2.65, 3.5, 3.11, 4.10, 5.50, 6.62  
 $\text{C}_2\text{H}_6\text{O}_2$  Ethyleneglycol, 4.11  
 $\text{C}_2\text{H}_6\text{S}_2$  Dimethyl disulfide, 1.45, 2.64, 7.41  
 $\text{C}_2\text{H}_7\text{NS}$  Cysteamine, 7.36, 9.14  
 $\text{C}_2\text{H}_{18}\text{CoN}_5\text{O}_2^{2+}$  Acetatopentaamminecobalt(III) ion, 1.7h  
 $\text{C}_2\text{N}_2\text{S}_2^-$  Bisthiocyanate radical ion, table 9  
 $\text{C}_3\text{H}_2\text{O}_4^{2-}$  Malonate ion, 2.75  
 $\text{C}_3\text{H}_3\text{N}$  Acrylonitrile, 2.38, 5.36, 6.37  
 $\text{C}_3\text{H}_3\text{O}_2^-$  Acrylate ion, 2.37, 6.35  
 $\text{C}_3\text{H}_4\text{N}_2$  Imidazole, 1.64  
 $\text{C}_3\text{H}_4\text{O}_2$  Acrylic acid, 5.35, 6.36  
 $\text{C}_3\text{H}_4\text{O}_4$  Malonic acid, 5.58  
 $\text{C}_3\text{H}_5\text{NO}$  Acrylamide, 2.36, 5.34  
 $\text{C}_3\text{H}_5\text{O}_2^-$  Propionate ion, 2.94  
 $\text{C}_3\text{H}_5\text{O}_2\text{S}^-$  3-Mercaptopropionate ion, 1.68  
 $\text{C}_3\text{H}_6\text{O}$  Acetone, 1.17, 5.33, 6.33; Allyl alcohol, 2.40, 5.38, 6.40  
 $\text{C}_3\text{H}_6\text{O}_2$  Propionic acid, 5.66, 6.88  
 $\text{C}_3\text{H}_7\text{NO}_2$  Alanine, 1.24, 2.39, 5.37, 6.39  
 $\text{C}_3\text{H}_7\text{NO}_2\text{S}$  Cysteine, 1.40, 6.54, 7.37, 8.18; 9.15  
 $\text{C}_3\text{H}_7\text{NO}_3$  Serine, 2.99, 6.90  
 $\text{C}_3\text{H}_8\text{O}$  1-Propanol, 1.85, 2.92; 2-Propanol, 1.86, 2.93, 3.6, 4.15, 5.65, 6.87  
 $\text{C}_3\text{H}_8\text{O}_3$  Glycerol, 4.13  
 $\text{C}_4\text{H}_2\text{O}_4^{2-}$  Fumarate ion, 2.69, 6.65; Maleate ion, 6.76  
 $\text{C}_4\text{H}_3\text{ClN}_2\text{O}_2$  5-Chlorouracil, 6.51  
 $\text{C}_4\text{H}_4\text{N}_2\text{O}_2$  Uracil, 1.99, 5.73, 6.100, 7.66  
 $\text{C}_4\text{H}_4\text{O}_4$  Fumaric acid, 5.52, 6.66; Maleic acid, 5.57  
 $\text{C}_4\text{H}_4\text{O}_4^{2-}$  Succinate ion, 2.100  
 $\text{C}_4\text{H}_5\text{N}$  Allyl cyanide, 2.41, 5.39; Methacrylonitrile, 2.77, 5.61  
 $\text{C}_4\text{H}_5\text{N}_3\text{O}$  Cytosine, 6.56  
 $\text{C}_4\text{H}_5\text{O}_2^-$  Crotonate ion, 5.45; Methacrylate ion, 5.59  
 $\text{C}_4\text{H}_6\text{NO}_4^-$  Aspartate ion, 1.32  
 $\text{C}_4\text{H}_6\text{N}_2\text{O}_2$  Dihydrouracil, 5.49  
 $\text{C}_4\text{H}_6\text{O}_2$  Crotonic acid, 2.51, 5.46; Methacrylic acid, 2.76, 5.60; Vinyl acetate, 2.116  
 $\text{C}_4\text{H}_6\text{O}_4$  Succinic acid, 5.68, 6.92  
 $\text{C}_4\text{H}_7\text{NO}_3$  *N*-Acetylglucosamine, 1.21  
 $\text{C}_4\text{H}_8\text{N}_2\text{O}_3$  Glycylglycine, 1.56  
 $\text{C}_4\text{H}_8\text{N}_2\text{O}_4\text{Pt}$  *cis*-Bis(glycinato)platinum(II), 1.11; *trans*-Bis(glycinato)platinum(II), 1.12  
 $\text{C}_4\text{H}_8\text{O}$  Tetrahydrofuran, 2.101a  
 $\text{C}_4\text{H}_8\text{O}_2$  Dioxane, 2.64a  
 $\text{C}_4\text{H}_9\text{NO}_2\text{S}$  Cysteine methyl ester (Methyl 2-amino-3-mercaptopropionate), 1.41; *S*-Methylcysteine, 1.72  
 $\text{C}_4\text{H}_{10}\text{O}$  2-Methyl-2-propanol (*tert*-Butanol), 1.74, 2.85, 5.64, 6.81  
 $\text{C}_4\text{H}_{10}\text{O}_2\text{S}_2$  Dithiothreitol (*threo*-2,3-Dihydroxy-1,4-dithiobutane), 1.47, 6.60, 8.19, 9.17  
 $\text{C}_4\text{H}_{10}\text{S}_2$  Diethyl disulfide, 1.43, 2.55, 7.39  
 $\text{C}_4\text{H}_{12}\text{N}_4\text{Pt}^{2+}$  Bisethylenediamineplatinum(II) ion, 6.25  
 $\text{C}_4\text{H}_{13}\text{ClN}_3\text{Pt}^+$  Chlorodiethylenetriamineplatinum(II) ion, 6.26  
 $\text{C}_5\text{H}_5\text{N}$  Pyridine, 2.95  
 $\text{C}_5\text{H}_5\text{N}_3$  Adenine, 6.38  
 $\text{C}_5\text{H}_5\text{N}_3\text{O}$  Guanine, 6.69  
 $\text{C}_5\text{H}_6\text{N}^+$  Pyridinium ion, 2.96  
 $\text{C}_5\text{H}_7\text{N}_2\text{O}_2$  Thymine, 1.89, 5.71, 6.96, 7.62, 9.37  
 $\text{C}_5\text{H}_8\text{O}_2$  Methyl methacrylate, 2.84, 5.63  
 $\text{C}_5\text{H}_9\text{NO}_3\text{S}$  *N*-Acetylcysteine, 1.20  
 $\text{C}_5\text{H}_9\text{NO}_4$  Glutamic acid, 6.67  
 $\text{C}_5\text{H}_9\text{O}_5$  Deoxyribose, 5.48  
 $\text{C}_5\text{H}_{10}\text{O}_2$  Ribose, 5.67  
 $\text{C}_5\text{H}_{11}\text{NO}_2\text{S}$  Methionine, 1.70, 2.79, 6.78, 7.49, 8.22, 9.24; Penicillamine (2-amino-3-methyl-3-thiobutyric acid), 1.80

 $C_9H_{14}N^+$  Trimethylanilinium ion, 2.113  
 $C_9H_{14}N_3O_7P$  Deoxycytidylic acid, 6.58  
 $C_9H_{16}NO_2$  2,2,6,6-Tetramethyl-4-oxo-1-piperidinyloxy (TAN), 1.88, 6.94, 7.61, 8.27, 9.36  
 $C_{10}H_2O_8^{4-}$  Pyromellitate ion, 2.97  
 $C_{10}H_{10}Fe^+$  Ferricinium ion, 7.16  
 $C_{10}H_{11}O_3^-$  2,3,4-Trimethoxybenzoate ion, 2.109; 3,4,5-Trimethoxybenzoate ion, 2.110; 2,4,5-Trimethoxybenzoate ion, 2.111; 2,4,6-Trimethoxybenzoate ion, 2.112  
 $C_{10}H_{12}N_2$  Tryptamine, 1.93  
 $C_{10}H_{12}N_2O_8^{4-}$  Ethylenediaminetetraacetate ion, 1.50a  
 $C_{10}H_{12}O_2$  Duroquinone, 1.48  
 $C_{10}H_{14}N_5O_6P$  Deoxyadenylic acid, 6.57  
 $C_{10}H_{14}N_5O_7P$  Deoxyguanylic acid, 6.59  
 $C_{10}H_{14}N_5O_8P$  Guanylic acid, 7.44  
 $C_{10}H_{14}O$  1-(*p*-Ethylphenyl)ethanol, 2.66; 1-Phenyl-3-butanol, 2.88  
 $C_{10}H_{16}N_2O_9P$  Thymidylic acid, 6.95  
 $C_{10}H_{17}N_3O_6S$  Glutathione, 1.53  
 $C_{11}H_{10}NO_2^-$  Indole-3-propionate ion, 1.66  
 $C_{11}H_{12}N_2O_2$  Tryptophan, 1.94, 2.114, 3.16, 6.98, 7.64, 8.29, 9.40  
 $C_{11}H_{13}N_3O$  Tryptophanamide, 1.96  
 $C_{11}H_{14}N_2O_3$  Phenylalanylglycine, 1.84  
 $C_{11}H_{14}N_2O_4$  Glycyltyrosine, 1.61  
 $C_{11}H_{16}O$  1-Methoxy-2-methyl-1-phenylpropane, 2.83  
 $C_{12}H_{14}N_2O_2$  *N*-Methyltryptophan, 1.75; Tryptophan methyl ester (Methyl 2-amino-3-indolylpropionate), 1.95  
 $C_{12}H_{25}NaO_4S$  Dodecyl sodium sulfate, 6.61  
 $C_{12}H_{29}ClN_3Pt^+$  Chlorotetraethyl-diethylenetriamineplatinum(II) ion, 6.27  
 $C_{13}H_9O_3^-$  *p*-Phenoxybenzoate ion, 6.84  
 $C_{13}H_{10}O$  Benzophenone, 1.34  
 $C_{13}H_{14}N_2O_3$  *N*-Acetyltryptophan, 1.23  
 $C_{13}H_{15}N_3O_3$  Glycyltryptophan, 1.60; Tryptophanlylglycine, 1.97  
 $C_{14}H_6O_8S_2^{3-}$  Anthrasemiquinone-2,6-disulfonate radical ion, 1.28, 4.9, 6.44; Anthrasemiquinone-2,7-disulfonate radical ion, 1.29  
 $C_{14}H_7O_5S^{2-}$  Anthrasemiquinone-1-sulfonate radical ion, 1.26; Anthrasemiquinone-2-sulfonate radical ion, 1.27  
 $C_{14}H_{14}ClN_3$  Acriflavin, 6.34, 7.28, 8.11  
 $C_{15}H_{18}N_4O_4$  Glycylglycyltryptophan, 1.58  
 $C_{16}H_{10}$  Pyrene (triplet state), 7.57  
 $C_{16}H_{28}CoN_4^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradeca-1,4,8,11-tetraene cobalt(II) ion, 1.5a  
 $C_{16}H_{28}Ni^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradeca-1,4,8,11-tetraenenickel(II) ion, 6.21, 7.21  
 $C_{16}H_{32}CoN_4^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradeca-4,11-dienecobalt(II) ion, 1.5b, 6.7, 7.11, 8.4  
 $C_{16}H_{32}CuN_4^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradeca-4,11-dienecopper(II) ion, 6.11  
 $C_{16}H_{32}Ni^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradeca-4,11-dienickel(II) ion, 6.20, 7.20  
 $C_{16}H_{36}CuN_4^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradecanecopper(II) ion, 6.10  
 $C_{16}H_{36}Ni^{2+}$  5,7,7,12,14,14-Hexamethyl-1,4,8,11-tetraazacyclotetradecanenickel(II) ion, 6.19, 7.19, 9.3  
 $C_{17}H_{20}N_2S$  Promethazine, 7.56, 9.32

$C_{18}H_{16}N_2O_4S_2$  Cystine dimethyl ester (Dimethyl 3,3'-dithiobis(2-aminopropionate)), 1.42  
 $C_{19}H_{42}ClN$  Hexadecyltrimethylammonium chloride, 6.70  
 $C_{20}H_{32}N_6O_{12}S_2$  Glutathione disulfide, 1.54  
 $C_{21}H_{29}N_7O_{10}P_2$  Nicotinamide-adenine dinucleotide, reduced, 7.51, 8.24, 9.26  
 $C_{30}H_{24}N_6Ru^{2+}$  Tris(2,2'-bipyridine)ruthenium(II) ion, 1.13, 7.23  
 $Ce^{3+}$  Cerium(III) ion, 2.8, 4.3, 6.4  
 $Cl^-$  Chloride ion, 2.9, 4.4, 5.6–5.7  
 $ClCoH_{15}N_5^{2+}$  Chloropentaamminecobalt(III) ion, 1.7d  
 $ClCrH_{15}N_5^{2+}$  Chloropentaamminechromium(III) ion, 1.8a  
 $ClH_{15}IrN_5^{2+}$  Chloropentaammineiridium(III) ion, 1.10a  
 $ClH_{15}N_5Rh^{2+}$  Chloropentaamminerhodium(III) ion, 1.12a  
 $ClH_{15}N_5Ru^{2+}$  Chloropentaammineruthenium(III) ion, 1.13b  
 $ClO_2$  Chlorine dioxide, 6.5, 7.8  
 $Cl_2^-$  Chlorine molecule anion, table 6  
 $Cl_3Pt^{2-}$  Tetrachloroplatinate(II) ion, 6.24, 7.22  
 $Co^+$  Cobalt(I) ion, 7.9  
 $Co^{2+}$  Cobalt(II) ion, 1.5, 6.6, 7.10, 8.3  
 $CoH_{15}N_5^{2+}$  Iodopentaamminecobalt(III) ion, 8.5  
 $CoH_{15}N_5O_3S^+$  Sulfitopentaamminecobalt(III) ion, 1.7j  
 $CoH_{15}N_5O_4S^+$  Sulfatopentaamminecobalt(III) ion, 1.7f  
 $CoH_{15}N_6O_2^{2+}$  Nitritopentaamminecobalt(III) ion, 1.7i  
 $CoH_{16}N_4O_2^{3+}$  Diaquotetraamminecobalt(III) ion, 1.7  
 $CoH_{16}N_5O_4P^+$  Phosphatopentaamminecobalt(III) ion, 1.7c  
 $CoH_{18}N_6^{3+}$  Hexaamminecobalt(III) ion, 1.7a  
 $Cr^{2+}$  Chromium(II) ion, 2.10, 6.8, 7.12, 8.6  
 $CrH_{17}N_5O^{3+}$  Aquopentaamminechromium(III) ion, 1.8b  
 $Cu^{2+}$  1.8c, 6.9  
 $Fe^{2+}$  Iron(II) ion, 2.11, 4.5, 6.12, 7.15, 8.7  
 $H$  Hydrogen atom, 7.3  
 $HIO^-$  8.9  
 $HNO_3^-$  4.21  
 $HO^-$  Hydroxide ion, 2.19, 5.16, 6.22  
 $HO_2$  Hydroperoxy radical, 6.2, 7.4  
 $HO_3P^{2-}$  2.23, 5.19–5.20  
 $HO_3S^-$  Hydrogen sulfite ion, 5.28  
 $HO_3Se$  3.14  
 $HO_3P^{\cdot-}$  Phosphate radical ion, table 5  
 $HO_4P^{2-}$  2.26  
 $HO_5P^{2-}$  5.25  
 $HO_5S^-$  Hydrogen peroxysulfate ion, 2.28  
 $H_2O$  Water, 2.20, 4.19, 4.20, 4.24, 4.25  
 $H_2O_2$  Hydrogen peroxide, 1.9a, 2.21, 5.17–5.18, 6.23, 7.17  
 $H_2O_2P^-$  Hypophosphite ion, 2.22, 5.22–5.24  
 $H_2O_3P^-$  Phosphite ion, 2.24, 5.21  
 $H_2O_3Se$  3.15  
 $H_2O_3P^{\cdot-}$  Phosphate radical, table 5  
 $H_2O_4P^{\cdot-}$  Phosphate ion, 2.25, 4.23  
 $H_3NO$  Hydroxylamine, 2.12, 5.13, 6.15  
 $H_4NO^+$  Hydroxylammonium ion, 2.13, 5.14, 6.16  
 $H_4N_2$  Hydrazine, 2.14, 5.09  
 $H_5N_2^+$  Hydrazinium ion, 2.15, 5.10–5.11, 6.14  
 $H_{17}N_5ORh^{3+}$  Aquopentaamminerhodium(III) ion, 1.12b  
 $H_{17}N_5ORu^{3+}$  Aquopentaammineruthenium(III) ion, 1.13c  
 $H_{18}N_6Ru^{3+}$  Hexaammineruthenium(III) ion, 1.13a  
 $I^-$  Iodide ion, 1.10, 5.8, 9.2  
 $IO^-$  Hypoiodite ion, 8.8  
 $I_2^-$  Iodine molecule anion, table 8  
 $Mn^{2+}$  1.10b, 6.13, 7.18  
 $NO$  Nitric oxide, 4.18  
 $NO_2$  Nitrogen dioxide, 1.10d; table 4  
 $NO_2^-$  Nitrite ion, 1.10c, 2.17, 4.6, 5.15, 6.18  
 $NO_2^{\cdot-}$  Nitrite radical anion, 4.25  
 $NO_3$  Nitrate radical, table 4  
 $NO_3^-$  Nitrate ion, 2.18  
 $NO_3^{\cdot-}$  Nitrate radical anion, table 4  
 $N_2O$  Nitrous oxide, 3.3  
 $N_2O_3$  Dinitrogen trioxide, 4.24  
 $N_2O_4$  Dinitrogen tetroxide, table 4  
 $N_3^-$  Azide ion, 2.16, 5.12, 6.17  
 $Ni^{2+}$  Nickel(II) ion, 1.10c  
 $O_2$  Oxygen, 3.4, 4.22  
 $O_2^-$  Superoxide ion, 1.2, 6.2  
 $O_2S^-$  Hyposulfite radical ion, table 3  
 $O_2Se^-$  3.12  
 $O_2S_2^-$  Thiosulfite radical ion, table 3  
 $O_2U^+$  Uranyl(IV) ion, 7.26, 9.4  
 $O_2U^{2+}$  Uranyl(VI) ion, 1.14  
 $O_3S^-$  Sulfite radical ion, 1.13f; table 3  
 $O_3S^{2-}$  Sulfite ion, 1.13e, 2.27, 5.26–5.27, 6.28  
 $O_3S_2^-$  Thiosulfate radical ion, table 3  
 $O_3S_2^{2-}$  Thiosulfate ion, 3.8, 5.29  
 $O_3Se^-$  3.13  
 $O_3Si^{2-}$  Silicate ion, 2.29  
 $O_4P^{2-}$  Phosphate radical ion, table 5  
 $O_4S^-$  Sulfate radical ion, table 2  
 $O_5S^-$  Peroxysulfate radical ion, table 3  
 $O_5S_2^{2-}$  Peroxythiosulfate ion, 5.30  
 $Ti(III)$  Titanium(III) ion, 6.28a  
 $Tl^+$  Thallium(I) ion, 2.30, 4.7, 6.29, 7.25  
 $V^{2+}$  Vanadium(II) ion, 6.30, 7.27, 8.10  
 $Zn^{2+}$  Zinc(II) ion, 1.14a
