Rural Utilities Service Broadband Initiatives Program

Round Two Application Directory

Last Mile and Middle Mile Infrastructure Applications

Issue Date: June 2, 2010

Broadband Initiatives Program (BIP) Round 2 Infrastructure Application Directory Important Notes

This directory includes applicant information for all 776 BIP Last Mile and Middle Mile Infrastructure applications received during Round 2, as well as a listing of organizations which filed Public Notice Responses (PNRs) to Round 2 BIP Infrastructure Applications.

Please note that RUS did not receive PNRs for every application. If no PNRs are listed for a given application, none were received.

Applications are sorted alphabetically by the applicant's state of incorporation, then by applicant name. An applicant's proposed project area(s) can be located:

- 1) Within the applicant's state of incorporation;
- 2) Outside the applicant's state of incorporation; or,
- 3) In multiple states.

In any case, each application is only listed once within this directory.

For instance, Butler Telephone Company, Inc., found on page 1 of this directory, is incorporated in the state of Alabama, and therefore listed in this directory in the Alabama section. However, Butler's application is proposing to serve portions of both the states of Alabama **and** Mississippi, but is **only** listed under Alabama, Butler's state of incorporation.

If you are interested in searching for applications which include proposed project area(s) within a specific state, you can use the Find or Search functions both located under the Edit menu in Adobe Acrobat.

Alabama

Applicant: Butler Telephone Company, Inc.
Application ID: 5487
Contact: TIMOTHY W. ULRICH
(608) 664-4114
gra@tdstelecom.com
Project Title: Butler Telephone Company, Inc.: Broadband project to serve rural unserved establishments
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Alabama, Mississippi
Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$4,588,540.00
Loan Request: \$0.00
Other Funding: \$1,529,513.00
Status: Application Received
Description: Butler Telephone Company, Inc., a subsidiary of TDS Telecom, proposes a project to bring high-speed DSL broadband service to unserved establishments within its rural service territory, which is comparable to the DSL service provided in its more populated areas. The network is also engineered so that it can be easily upgraded at a reasonable cost to meet future needs.

Project Title: Black Belt Region Mobile Broadband Access Improvement
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Alabama

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$6,089,241.00
Loan Request: \$2,609,675.00
Other Funding: \$1,307,865.00

Status: Application Received

Description: Alabama's Black Belt region is culturally rich and historically significant but also one of the poorest and more economically depressed areas of the United States. With this project, Pine Belt Cellular, Inc., a locally owned and operated FCC-licensed commercial mobile radiotelephone service carrier, will deliver the kind of mobile broadband infrastructure and services that are increasingly expected among residents, businesses and critical community organizations. The mobile broadband project will serve almost 40,000 residents and travelers within the rural portions of much of Choctaw, Dallas, Marengo, Perry and Wilcox counties. This last-mile project will reach more than 20,000 previously unserved premises with new EVDO-based mobile broadband services at bandwidths up to 4.5 mbps up/down while providing essential improvements and expansion to the 1xRTT network in place today.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$13,464,301.00
Loan Request: \$5,770,415.00
Other Funding: \$293,990.00
Status: Application Received

Description: Alabama's Black Belt region is culturally rich and historically significant but also one of the poorest and more economically depressed areas of the United States. With this project, Pine Belt Telephone, Inc., a locally owned and operated incumbent local exchange carrier, will deliver the kind of broadband infrastructure and services necessary for improving the economic, educational and healthcare opportunities of more than 12,000 rural Black Belt residents, businesses, and critical community organizations. This last-mile project (including middle-mile enhancements) will: a) deliver high speed services via new fiber-to-the-home; b) upgrade and expand high-speed DSL services where fiber is not yet appropriate; c) replace older microwave bottlenecks with "future proof" high-capacity fiber; and d) extend the network to lower Internet interconnection costs.

Project Title: McCarthy Microwave Shot

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: Alaska

Project Type: Middle Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$2,613,975.00

Loan Request: \$2,613,975.00

Other Funding: \$0.00

Status: Application Received

Description: The proposed middle mile project will extend terrestrial wireless broadband connectivity to McCarthy, AK. McCarthy is a remote rural community where CVW's parent, Copper Valley Tel. Coop., is the serving LEC. The project will allow CVTC to transition from a low bandwidth capacity satellite link to the proposed high capacity terrestrial microwave middle mile service in an area that has no terrestrial connections to outside networks. Currently, all communications into & out of McCarthy utilize earth orbiting satellites. This middle mile project will allow broadband services to be brought to households, businesses and key community organizations that are currently unserved, creating the potential for increased business growth, public services, public safety, & quality of life for the residents of McCarthy. The applicant also proposes to leverage an ARRA award as detailed in the application.

Project Title: Service Aimed Broadband Rural Expansion (SABRE) Phase II
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Alaska

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$41,466,824.00
Loan Request: \$17,901,096.00
Other Funding: \$0.00

Status: Application Received

Description: The Service Aimed Broadband Rural Expansion (SABRE) Phase II project is a direct enhancement of an approved USDA ARRA RUS Round 1 Grant called SABRE (Phase I). This project leverages infrastructure put in place in Round 1 and now dramatically expands rural broadband service to impoverished rural areas of Southeast, Northwest and Central Alaska. SABRE Phase II will deliver low cost, high speed broadband and Public Safety interoperability to communities where commercial industry has not developed adequate internet service. The project will dramatically enhance service to individual households, community centers, schools, medical clinics and Public Safety organizations. SABRE Phase II is a model application for providing inexpensive rural broadband service nationwide using a unique combination of wireless technologies.

Project Title: St. Paul Island, AK – Last Mile Broadband Access Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Alaska
Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$303,782.00
Loan Request: \$0.00
Other Funding: \$336,143.00
Status: Application Received
Description: This project will replace copper wire plant with a fiberoptic plant and backbone that will bring broadband internet to the community for the first time. The project will provide 186 premises with 100M capacity fiber to the home from a 10Gig capacity ring backbone. TDX operates its own earth station satellite link.

Project Title: TERRA-NW: Terrestrial Broadband in Northwest Alaska
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Alaska

Project Type: Middle Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$108,213,247.00
Loan Request: \$46,377,107.00
Other Funding: \$20,000,000.00
Status: Application Received
Description: TERRA-Northwest will deliver end-to-end middle mile terrestrial broadband service from the Internet backbone in Anchorage to the to almost 4000 households and 300 businesses in 20 rural Tribal communities scattered across more than 80000 sq. mi. in the Norton Sound and Kotzebue Sound regions of Alaska. Linked to the RUS-funded TERRA-SW network, TERRA-NW will close a backbone "œring" that will provide improved network reliability for all of Western Alaska by utilizing a GCI contributed fiber connection to Anchorage. This project is sustainable from inception, and will establish a multi-generational communication solution for this vast area. It will expand communications options for all users; support private/public economic development efforts; improve crucial telemedicine and distance learning services; and enhance the operations of governments, tribes, and non-profits.

Other Funding: \$0.00

Status: Application Received

Description: Hopi Telecommunications, Inc. (HTI) proposes a project to build out infrastructure and provide necessary equipment to establish the fiber-optic connection between HTI and the world. To achieve this HTI proposes to build 61 miles of fiber optics between the community of Jeddito in their service area and the Frontier Communications point-of-presence (POP) in Holbrook, AZ. In addition to this fiber build-out, HTI proposes a last mile component that would provide broadband services to currently unserved subscribers around the community of Jeddito and Spider Mound. HTI proposes to serve these subscribers utilizing wireless point-to-multipoint WiMAX access equipment. As the middle mile component is the predominant part of the proposed system, this project is classified as Middle Mile Project.

Description: San Carlos Apache Telecommunications, Inc. (SCATUI) is proposing to provide fiber to the premise (FTTP) services to two areas within their serving areas on the San Carlos Apache Reservation in Arizona. In the Bylas PFSA, residents are being required to relocate their homes to a different area due to uncontrollable circumstances. This grant is crucial in providing these customers with broadband internet and phone service which SCATUI would not be able to provide otherwise. Within the San Carlos service area, SCATUI is planning to provide FTTP services to five new communities, a hospital, and multiple doctor facilities that are currently unserved. In addition, SCATUI is proposing to build five new tower sites to provide broadband internet service for residents and emergency service personnel to very remote areas of the reservation that are unserved.

Proposed Project Area: Kansas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$993,785.00
Loan Request: \$0.00
Other Funding: \$0.00
Status: Application Received
Description: Our company proposes to install a turn-key wireless internet system to six small and rural communities across four counties in Kansas. This service would allow the residents, students, city, county, and state employees within the areas access to the high speed internet that they have long been denied due to their remoteness. Our system will not only provide high speed internet, it will be a "green project" in that the remote broadband Internet gateway is solar powered, with backup commercial power in the event of prolonged periods without solar support. In addition to the projects energy savings, it is 100% capable of integration with future terrestrial internet services, and provide a valuable back up internet, as well as emergency communications when needed.

Project Title: Broadband for Remote & Rural Arkansas Communities
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Arkansas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,071,479.00
Loan Request: \$0.00
Other Funding: \$0.00
Status: Application Received
Description: Our company proposes to install a turn-key wireless Internet system to 12 small and rural communities across 8 counties within Arkansas. This service would allow the residents, students, city, county, and state employees within the areas access to the high speed Internet that they have long been denied due to their remoteness. Our system will not only provide high speed Internet, it will be a "green project" in that the remote broadband Internet gateway is solar powered, with backup commercial power in the event of prolonged periods without solar support. In addition to the projects energy savings, it is 100% capable of integration with future terrestrial Internet services, and provides a valuable back up Internet as well as emergency communications when needed.

Proposed Project Area: Arkansas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$7,285,202.00
Loan Request: \$0.00
Other Funding: \$2,428,401.00
Status: Application Received
Description: Windstream provides digital phone, high-speed Internet and high-definition video and entertainment services to residential and business customers. In many of the rural areas Windstream serves, the cost of broadband deployment is prohibitive. The proposed project will allow Windstream to extend its broadband network to provide broadband to many currently unserved homes and businesses. Windstream will extend broadband service using the same architecture, equipment vendors, technologies, processes, and procedures that it uses to provide broadband service to over 1 million current customers. Windstream proposes to use industry standard ADSL2+ (Asynchronous Digital Subscriber Line) protocols that will allow customers to enjoy broadband at speeds of up to 12 Mbps. The project will bring broadband to 4,900 homes and 339 businesses that otherwise may never enjoy the benefits of broadband.

Project Title: Windstream Concord Telephone, Inc
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: North Carolina

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,567,273.00
Loan Request: \$0.00
Other Funding: \$1,855,758.00
Status: Application Received

Description: Windstream provides digital phone, high-speed Internet and high-definition video and entertainment services to residential and business customers. In many of the rural areas Windstream serves, the cost of broadband deployment is prohibitive. The proposed project will allow Windstream to extend its broadband network to provide broadband to many currently unserved homes and businesses. Windstream will extend broadband service using the same architecture, equipment vendors, technologies, processes, and procedures that it uses to provide broadband service to over 1 million current customers. Windstream proposes to use industry standard ADSL2+ (Asynchronous Digital Subscriber Line) protocols that will allow customers to enjoy broadband at speeds of up to 12 Mbps. The project will bring broadband to 5,000 homes and 226 businesses that otherwise may never enjoy the benefits of broadband.

Status: Application Received

Description: Windstream provides digital phone, high-speed Internet and high-definition video and entertainment services to residential and business customers. In many of the rural areas Windstream serves, the cost of broadband deployment is prohibitive. The proposed project will allow Windstream to extend its broadband network to provide broadband to many currently unserved homes and businesses. Windstream will extend broadband service using the same architecture, equipment vendors, technologies, processes, and procedures that it uses to provide broadband service to over 1 million current customers. Windstream proposes to use industry standard ADSL2+ (Asynchronous Digital Subscriber Line) protocols that will allow customers to enjoy broadband at speeds of up to 12 Mbps. The project will bring broadband to 1,150 homes and 24 businesses that otherwise may never enjoy the benefits of broadband.

Project Title: Wireless Broadband for East San Diego County
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: California
Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$499,999.00
Loan Request: \$500,000.00
Other Funding: \$0.00
Status: Application Received
Description: Proposed project is to build a high speed wireless broadband consumer Internet service, including VOIP, for the unserved and under-served rural communities of E. San Diego County, CA. This project will provide broadband access to approximately 10,000 households and later up to 25,000 households, local businesses and anchor institutions in these communities serviced by more than 1 Gigabit Bandwidth transmission to the area ramping up to 10 Gbs. This project will also provide BroadBand service to hundreds of community institutions, public safety entities, schools, local government agencies and critical care facilities in the service area.

Proposed Project Area: Arizona, California

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$4,891,582.00
Loan Request: \$5,091,237.00
Other Funding: \$3,708,053.00
Status: Application Received
Description: Aztech Cable, LLC is proposing to construct roughly 45 miles of fiber optic cable and purchase equipment to deliver advanced Wireless and Wired broadband services to 11,474 total households, 540 businesses, and 79 anchor institutions in remote northern Arizona, and California. Aztech Cable will provide IPTV service along with voice and broadband capabilities. We will be required to hire approximately 12 new employees to start and anticipate 10 more needed with the growth of the company. Our project successfully meets the objectives specified in the NOFA. Our cost to distribute these services is slightly over \$800 per customer; this is extremely cheap considering the level of services they will be getting. This technology using WiMAX to deliver wireless IPTV, VOIP and Broadband Services, is cutting edge and unique to the world.

Project Title: Mendocino County Wireless Broadbank Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: California

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,652,715.00
Loan Request: \$0.00
Other Funding: \$440,000.00
Status: Application Received
Description: This is a wireless broadband project covering approximately 1280 square miles of rural area from US Highway 101 to the Pacific Ocean in primarily Mendocino County and a small area of Northern Sonoma County. The service performance will be comparable to wired DSL service offered by AT&T in Santa Rosa, CA area. A good portion of this proposed service area not only has no broadband internet service and no cell-phone service. The "project" area is quite remote in many cases and in some areas families are using Solar or Coal powered generators as their primary electrical source.

Project Title: 10M+ Broadband for Distressed Inland Empire Communities (10M-IEC)
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: California

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$10,783,150.00
Loan Request: \$2,999,925.00
Other Funding: \$1,621,425.00

Status: Application Received

Description: Riverside and San Bernardino Counties within the Inland Empire Communities in California suffer the worst home foreclosure and unemployment among the nation and with 10M+ Broadband service, we hope to help the low-income residents (majority of the 4M population in a 7,262 square mile area) to jump-start from their financial crisis. The area is currently underserved (73%) with some totally unserved (57%) regarding Broadband access of higher than 5 Mbps. We will build out Gigabit Broadband infrastructure in Riverside and San Bernardino County areas by using DSL, Broadband Wireless and Fiber networks combined at an Internet capacity starting from 10Mbps to reach Gbps range in the next 5 years; a capacity conforming to the latest FCC policy. We choose to build a long-term hybrid evolving network, avoiding over-utilization of a limited 4M channel bandwidth DSL technology alone.

Description: This project is a collaborative effort among local and regional governments, tribes, anchor institutions and local service providers to offer high speed broadband to communities with minimal or no broadband access. Individuals and institutions will be wirelessly interconnected, enabling them to securely exchange information at speeds over 100 Mbps and to access the Internet at speeds over 10 Mbps. The area is comprised of approximately 12,000 households and 2,000 businesses and 25 anchor institutions scattered among redwood covered hills. Between 2000 and 2004 this area was the fastest growing in Oregon. Over the past 5 years the numbers have begun to decline due to economic conditions and a lack of educational and medical resources. This new wireless connectivity will help attract new residents, businesses and tourism to this majestic, rugged coastal area.

Project Title: Inyo Mono Broadband Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: California, Nevada

Project Type: Middle Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$3,177,078.00
Loan Request: \$1,359,026.00
Other Funding: \$2,194,000.00
Status: Application Received
Description: This 300 mile project, will help rural, low-income and diverse communities by providing access to broadband service by consumers residing in unserved areas of California, as well as bring improved broadband service to those in underserved areas. This is a middle mile and last mile upgrade to an existing backhaul that has already been running in the areas it supports. Upgraded broadband service will enable public safety agencies, hospitals, schools, businesses, tribal lands, libraries, and households to access the needed bandwidth to effectively conduct their important business transactions. The upgraded backhaul will also bring down the current high prices that are being charged by bandwidth providers to this area. This will result in more affordable, high-speed internet to the consumers, as well as enable continuous speed upgrades as the industry demands.

Project Title: Tuolumne County Rural Remote Broadband Initiative
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: California

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$13,263,020.00
Loan Request: \$13,263,020.00
Other Funding: \$0.00
Status: Application Received
Description: Tuolumne County Rural Remote Broadband Initiative proposes the construction of a state-of-the-art Gigabit Passive Optical Network (GPON). By installing a completely new fiber optic plant from the ground up, TCR RBI will be able to offer a much higher quality of broadband service to over 15,000 homes than possible with any other technology. This application is based upon the construction a 500 mile fiber optic network and will place Tuolumne County on par or ahead of metro areas in the broadband arena by providing up to 100 Mbps of broadband access per home

Description: SCTCA, a multi-service 501(c)3 est.1972, a consortium of 19 federally-recognized Indian tribes in Southern California, is going to use its existing Tribal Digital Village fixed wireless network infrastructure to deploy high-speed broadband Internet service to the tribal home on its affiliated reservations and immediate surrounding community because there are NO other terrestrial-based or cost-effective options for its people. This will increase broadband adoption from the 17% current baseline usage, at community anchor institutions, to 70% (4800 new broadband users, in 2000 homes) among members of 19 Native American tribes in rural Southern California. Thus continuing to keep with its mission to serve the health, welfare, safety, education, cultural, economic & employment needs of its tribal members.

Project Title: Wireless Broadband for Underserved Rural Areas of San Joaquin, Alameda, and Contra Costa Counties

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: California

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,181,980.00
Loan Request: \$1,727,327.00
Other Funding: \$767,700.00
Status: Application Received

Description: This project will extend WeCare's™ broadband wireless network into rural, underserved regions of San Joaquin, Alameda, and Contra Costa counties. The costs of building landline infrastructure to serve these low density housing and geographically isolated regions have prohibited anyone from doing so. The network design calls for leveraging WeCare's™ current systems and infrastructure, along with existing third party communications facilities, to quickly and cost-effectively bring broadband services to these underserved areas. The expanded network will provide high speed access to 25 critical community facilities, 7210 households, 26K residents, and 537 businesses over 824 square miles. Introducing high speed access to these underserved rural areas will improve the delivery of educational services and access to healthcare, create new jobs, and help drive economic development.

Description: Open Range Communicationâ€™s Middle Mile(MM) broadband plan for a BIP loan leverages the physical infrastructure of our current network deployment in rural communities across America to enable affordable, high speed microwave broadband capabilities to rural community anchor institutions that lack sufficient network capacity from existing providers. Anchor institutions include a broad mix of public, private and rural institutions critical to economic development and quality of life. Open Rangeâ€™s plan covers 17 proposed funded service areas(19 communities) in five states. Our plan will make high capacity services available to nearly 1500 rural community anchor institutions. Open Range brings the proven experience needed to execute on its plans. We have demonstrated our ability to generate jobs and revenue, ensure financial sustainability, and complete projects on time and within budget.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$0.00
Loan Request: \$86,629,835.00
Other Funding: \$20,926,742.00
Status: Application Received
Description: Open Range will extend affordable wireless broadband to 2M Americans in underserved areas and carry out President Obama's broadband goals. Contracts are in place for Open Range's current build so construction can begin immediately; the plan is sustainable, adoption achievable. WiMAX, and an experienced telecom team, familiar to the RUS, will deliver on the President's promises.

Project Title: Qwest 14-state High Speed Access Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Arizona, Colorado, Idaho, Iowa, Minnesota, Montana, Nebraska, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, Wyoming

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$348,806,468.00
Loan Request: \$0.00
Other Funding: \$118,170,540.00
Status: Application Received
Description: Qwest Corporation's project proposes deployment of High Speed Access within its current 14-state ILEC footprint. Over 500,000 living units (LUs) in AZ, CO, ID, IA, MN, MT, NE, ND, NM, OR, SD, UT, WA and WY will be served with speeds ranging up to 40 Mbps downstream. About 90% of the LUs proposed for new or upgraded broadband service are in rural areas. The system design uses a combination of technologies including Ethernet, fiber and radio backhaul to reach covered LUs and varies based on the specific location and geography. The project will provide last mile infrastructure to support increasing capacity requirements and integrate new broadband dependent applications and technologies. And, if funded, the project's \$467 M investment will create more than 23,000 jobs for local economies in the 14 states (calculated from the Atkinson formula offered in a 2009 broadband study).

Description: "Building Community Through Commerce" â€œ Jedai Networks (Jedai) will transform rural, underserved, and unserved communities throughout the state of Georgia into a network of self-sufficient Broadband Internet service providers (ISP). Collaborating with local communities, Jedai will provide Broadband infrastructure: US-manufactured telecom and datacom switching, routing & transport hardware and software, backhaul transport services, network operations, maintenance, and customer support. Jedai will employ and train county utility workers to support customer premise installations and customer care. Jedai's platform offers a unique awareness and training framework to administer affordable Broadband and to accelerate adoption. Furthermore, Jedai will deploy community E-Commerce portals to deliver improved services and empower local entrepreneurs.

Description: The Main Street Broadband (MSB) North Florida Broadband project is a 4G wireless last mile project serving over 83,000 rural residents and 31,000 households in 5 rural counties. MSB was founded, and the network designed, to provide fast, affordable connectivity to the rural un and underserved residents and businesses of Southern Georgia and Northern Florida. MSB currently serves eighteen (18) rural communities in South Georgia and believes that the MSB North Florida Broadband project effectively leverages existing RUS funding, the North Florida Broadband Authority (NFBA) Round I grant (Easygrant ID 2259), and the existing scalable infrastructure of the company. The project has significant public and private support, will serve many critical facilities and anchor institutions, is shovel ready and is sustainable.

Proposed Project Area: Alabama, Georgia

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$6,663,515.00
Loan Request: \$6,663,515.00
Other Funding: \$1,050,000.00
Status: Application Received
Description: SGRITA proposes to deploy a Last Mile licensed 700 MHz and 2.5 GHz 4G mobile & fixed wireless broadband network to extend service across 1,947 square miles of five rural southwest Georgia counties. This area is remote with many portions more than 50 miles from any urban areas. SGRITA's PFSA has 58% of households unserved with 97% of the PFSA geographic area with no access to broadband service. This last mile network will pass 21,033 homes, 903 businesses, 171 Critical Community Facilities and 75 Public Safety mobile applications plus 1,369 farms and 4,900 irrigation systems. SGRITA's PFSA is defined by the five counties who funded the startup of its operations in 2005. For the last several years, SGRITA has been the largest provider of bandwidth in the region.

Description: The Idaho Rural Communities Broadband Initiative is a public/private collaboration bringing fiber optic infrastructure to rural Idaho schools, libraries and medical facilities. The project leverages resources of the Idaho Educational Network (IEN) to build "last mile" telecommunications facilities. Funding for the 24 anchor sites identified in this project establishes key infrastructure within these rural communities, provides access to such broadband applications as distance learning, telemedicine, telecommuting and telegovernment, and fuels economic development by encouraging private sector broadband investment throughout each of these rural communities. The incumbent local exchange carriers (ILECs) serving these rural communities will utilize this infrastructure to make broadband available for approximately 5887 unserved households in these 15 rural Idaho communities.

Proposed Project Area: Idaho

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,568,608.00
Loan Request: \$672,260.00
Other Funding: \$0.00
Status: Application Received

Description: The Southern Idaho communities of Sterling, Springfield, and Pingree are located in an area that is very rural and agricultural. These small communities are roughly 50 road miles northwest of Pocatello, Idaho on State Highway 39. The economic development experienced in larger (but still relatively small) communities such as Pocatello has not extended to the areas in part because the American Falls reservoir separates the proposed funded service area geographically from the larger communities. Deployment of broadband services in service area is the main intent on the proposed project. We are looking at starting with a minimum 3 Mbps residential package with higher throughput packages offered to the businesses. The proposed last mile service area includes 451 households and 25 businesses are located within the proposed last mile service areas.

Status: Application Received
Description: The proposed network will reach all tribe members living on the Fort Hall Reservation and provide a broadband pipe to each customer using either fiber to the home/business (FTTH) for residences, small businesses, larger businesses, government agencies, tribal agencies, schools, and clinics in the town of Fort Hall, ID or WiMAX wireless local loop (WLL) technology to rural residences and small businesses. The wireline FTTH service will provide capability for speeds of up to 50 Mbps per customer. The wireless network will provide speeds of up to 13 Mbps for the majority customers (which live close to the towers) and up to 4 Mbps for the more remote customers.

Other Funding: \$0.00
Status: Application Received

Description: Conxxus Last Mile is a collaboratively rooted project that will bring the first ever ubiquitous, high speed service to the 5595 sq. mile rural territory in East Central Illinois. Conxxus will draw local anchor institutions and their populations into the 21st Century with high-speed internet capable of delivering 100 Meg of speed to key anchor institutions, businesses, villages and farms. Conxxus will help bring high caliber jobs and reverse an economic climate in rural areas in Illinois that have been losing companies and educational opportunities due to the information divide, steadily in the last decade. Working in conjunction with the State of Illinois, the participating communities and their boards is not new to Conxxus. Having been in business delivering service to rural Illinois, with this project Conxxus will be able to continue that "partnership".

Status: Application Received
Description: Kaizen Net of St. Francisville, IL (pop. 759 in the 2000 census) proposes the South Eastern Illinois/Wabash Valley Expansion (or SEIWVE, pronounced "savesave") to serve a 100 percent rural area that has a population density of only 7 households per square mile. The project will provide broadband availability at speeds up to 3 Mbps in aggregate. This is precisely the kind of company and service area that the RUS BIP program is designed to serve. The company already offers discounts to local police and fire departments that request it, and also provides discounted service to a local library. Kaizen Net welcomes the suggestion of the RUS BIP program that such discounts be offered to all critical community institutions and SDBs in the service area.

Project Title: SatNet Last Mile Broadband Enhancement
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Illinois, Indiana

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$192,816.00
Loan Request: \$82,635.00
Other Funding: \$148,799.00
Status: Application Received
Description: SatNet will provide broadband access to populations lacking High-Speed Internet in rural, north-central Illinois via advanced wireless technology. This project, servicing 5148 households and 1531 businesses, will promote in-home broadband access to customers who would otherwise be limited in their choice of broadband providers. Additionally, it will stimulate small business development, enhance agri-business, and support public safety agencies as well as other community anchor institutions. End users will be afforded opportunities to gain high end broadband access at low end rates.

Project Title: Shawnee's FTTH Project: Focused Economic Revitalization & Sustainable Transformation of Southern IL
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Illinois

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,102,940.00
Loan Request: \$6,249,989.00
Other Funding: \$1,000,000.00
Status: Application Received
Description: Shawnee's Southern IL Sustainable Broadband Transformation proposal provides an opportunity for transforming citizens in underserved, low-income areas into highly productive members of the community by first empowering these communities with broadband technology. Sadly, regarding per-household income and unemployment in Illinois, these communities rank among the lowest and highest, respectively. Shawnee believes its proposal to develop a broadband network will create new jobs and economic growth, and stimulate innovation and investment. Shawnee's FTTH network is capable of 1 Gbps transmission speed and will serve 1,209 households, 438 businesses, and 35 anchor institutions, public schools, libraries, law enforcement, and medical care facilities. Shawnee requests 85% loan and 15% grant for this revitalization, costing just over \$8 million, including \$1 million of new, outside investment.

Project Title: T6 Rural Broadband Initiative
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Illinois, Wisconsin

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$17,579,222.37

Loan Request: \$7,897,914.63

Other Funding: \$0.00

Status: Application Received

Description: The T6 Rural Broadband Initiative will provide High Speed Internet access and affordable telephone service to an 8 county area of Northern Illinois and Southern Wisconsin who currently do not have High Speed Internet as an option. The initiative also upgrades the current T6 infrastructure to meet the ever-increasing bandwidth demands of our customers. T6 Broadband has over seven years of experience providing Internet access to the area and to date has brought a large number of new jobs to the communities we serve. With this initiative, T6 Broadband will be able to add even more jobs over the next year.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$12,824,976.00
Loan Request: \$14,968,135.00
Other Funding: \$0.00

Status: Application Received

Description: US Sonet is proposing a last mile fiber to the home project throughout portions of six counties in south central Illinois. Those counties include Marion, Fayette, Jefferson, Clinton, Washington and Montgomery. This proposed expansion area will connect every incorporated and unincorporated community within the project area to a time tested "Triple Play" provider with a strong history of quality products and unmatched customer service that is currently operating in this area. US SONET's proposed expansion area will reach very rural portions of the counties mentioned, and will provide them with 100 Mbps symetric broadband service, cableTV and telephone services. It is the belief and philosophy of US SONET's president and employees that everyone, regardless of geographical location or economic status deserves the opportunity to access the world wide web.

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Indiana

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$7,301,213.00
Loan Request: \$2,433,738.00
Other Funding: \$0.00

Status: Application Received

Description: The ultimate goal of this project is three fold. First, bringing fiber to Monticello and second to Winamac will afford SugarDog the opportunity to serve large business with long-needed true enterprise class internet service. Currently only the local telephone company is offering T-1 style service to large and medium sized business. T-1 service is expensive and leaves most companies under served. The second goal of the Monticello Broadband Project is to blanket the town and surrounding lakes with 802.11 b/g/n wireless service. By blanketing the community with simple low- cost broadband service SugarDog will effectively open broadband service to all who desire service. The third is to run fiber to Carroll County along Lake Freeman. This will offer IP Video Service over IP and 802.11b/g/n Wireless Internet Service.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$14,038,468.00
Loan Request: \$0.00
Other Funding: \$0.00
Status: Application Received
Description: Metro FastNet will to serve the last mile areas in the central Indiana 9th Congressional district, the Kentucky 2nd and Kentucky 4th. The majority of these areas are unserved or underserved by larger companies. We will partner with local governments to provide all children and students with access to 21st Century broadband. 5000 unserved rural 1-12K school children will receive connection via funding from this project. We also will partner with local communities to provide primary and backup internet service for first response police, fire and emergency needs. Hospitals will receive primary or backup service. Utilities can become more green by providing digital monitoring of water and electric meters. This will allow leaks to be detected immediately. Solar backup will be used to power our services. We have received numerous letters of support from the communities in our service area.

Grant Request: \$8,343,810.00
Loan Request: \$0.00
Other Funding: \$2,781,270.00
Status: Application Received

Description: Iowa Telecom proposes to construct fiber optic facilities on 40 different routes between central offices and other critical locations throughout Iowa. This project would replace interoffice copper, provide diverse interoffice fiber between numerous Iowa Homeland Security County Emergency Management Centers, provide Ethernet and TDM backhaul and eliminate several facility bottlenecks. Iowa Telecom proposes to offer speeds from DS-1 to OC-48 transmission speeds or 100 mbps to 1 gbps Ethernet transmission speeds over this middle mile network. These capabilities will permit vendors to offer high-speed retail broadband services in unserved/underserved communities. Areas that Iowa Telecom will serve with this project are primarily small outlying residential communities. We anticipate that this project will pass approximately 12,650 households and a relatively small amount of businesses.

Project Title: Advanced Wireless Broadband Services for Rural Areas in Southwest Iowa
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Iowa, Missouri, Nebraska

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$21,182,254.00
Loan Request: \$22,046,836.00
Other Funding: \$0.00
Status: Application Received

Description: Iowa Wireless Services, LLC ("i wireless") proposes to provide broadband wireless service in 14 rural counties in Southwest Iowa. The project will employ advanced HSPA broadband technology with speeds of up to 14 Mbps, with upgrade potential up to 168 Mbps. The wireless network will give rural residents access to broadband services that most would not otherwise have due to the high cost of deploying wireline services in rural areas. i wireless has specifically targeted this project for areas outside of town and municipal boundaries as broadband wireline services in the rural areas covered by the project generally do not extend far beyond those borders. Approximately 28,854 households and 12,174 businesses will be passed by the project.

Description: Long Lines Wireless LLC, through the Siouxland Wireless Broadband project, will upgrade and expand its existing wireless and fiber networks to provide high-speed HSPA+ broadband services to rural, underserved residents, businesses, public safety agencies and critical community facilities in NE Iowa and parts of SE South Dakota and NE Nebraska. HSPA+ is one of the most successful and widely deployed commercial mobile broadband services available. The project will provide quality broadband access to a total population of 585,353 and 24,081 businesses including 4,862 critical community institutions. Continuing its strong history of community partnership, the project will provide a fully mobile broadband solution at speeds not previously available to promote broadband usage, create jobs, and stimulate local economies in this rural part of America.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$873,433.00
Loan Request: \$0.00
Other Funding: \$873,433.00
Status: Application Received
Description: Cedar Falls Utilities (CFU) currently operates a hybrid fiber coax (HFC) system serving nearly all homes and businesses within the city limits of Cedar Falls. This system has been operational since 1996 and provides broadband service of up to 100 Mbps. If funded, CFU intends to extend their broadband capabilities into an 89 square mile rural service area immediately north and west of the current HFC system boundaries. This new broadband system will employ a combination of state of the art broadband wireless (WiMax) and fiber to the premises (FTTP) technologies. In doing so, CFU would increase the availability, affordability and adoption of broadband services and speed in rural Black Hawk, Butler and Grundy counties. It is estimated that the proposed funded service area is at least 90% unserved with broadband services.

Description: The Applicant, the Iowa Tribe of Kansas and Nebraska, is a sovereign American Indian nation and is seeking to provide advanced communication services on its federally-recognized lands. The Applicant's 100 percent rural PFSA is effectively unserved by broadband today. Applicant has designed an economical and sustainable Fiber-to-the-Premise network that will serve the technical needs of its people for many years to come. Granting this application would, in addition to bringing broadband to an unserved rural area, lend support to other economic development projects being pursued by the Applicant. Further, it would allow the Applicant to provision communication services on its land, an action that has been recognized as a sovereign right by the federal government. This application represents a remarkable opportunity not just for the Iowa Tribe but for the whole country.

Project Title: Fixed Wireless Last Mile Infrastructure Proposal for Kansas and portions of IA, MO, NE and OK

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Iowa, Kansas, Missouri, Nebraska, Oklahoma

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$54,709,850.00
Loan Request: \$19,222,382.00
Other Funding: \$0.00
Status: Application Received

Description: Pixius Communications, LLC is requesting grant and loan funding to construct a fixed wireless last mile network that will support (1) the expansion of Pixius's™ fixed wireless last mile broadband service in rural unserved and underserved areas; and (2) provision of collocation space for public safety agencies within the Proposed Funded Service Area (PFSA). The project covers 98 counties in Kansas and certain surrounding counties in Iowa, Missouri, Nebraska and Oklahoma.

Project Title: ACCESS OWEN COUNTY
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Kentucky

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,833,239.00
Loan Request: \$785,675.00
Other Funding: \$606,361.00
Status: Application Received

Description: Just as two-way communication has always been utmost importance in the past, it is even more critical to the present and future-. This Loan/Grant application is submitted to improve communication access to the majority of the population in Owen County. It covers approximately 111 square miles, incorporating 3100 housing units and 140 businesses. Our application is designed to place fiber (HFC) to nodes (serving sections) throughout the cabled area. With fiber, the existing coaxial plant can deliver with improved performance and reliability the communications for voice, data and video. In areas where the coaxial plant cannot support the services, fiber (RFoG) will be used to connect directly to the home. Signal technology will be by RF in analog and digital format. Voice will ride on IP (Internet Protocol) transported to the headend by digital RF which delivers both video and data.

Project Title: South Central Wireless - Attica, Kansas Fiber to the Premise
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Kansas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$557,621.00
Loan Request: \$560,000.00
Other Funding: \$575,973.00
Status: Application Received

Description: South Central Wireless, Inc., will construct a fiber-to-the-premise infrastructure for Attica, KS (365 establishments passed) and offer voice and high speed services. High speed services ranging from 1.5Mbps to 20Mbps (including symmetric rates) will be immediately offered to all consumers and businesses in Attica. The proposed technology for this system will be immediately capable of dedicated 100Mbps high-speed services for each customer without further investment of time or finances. Attica does not have wireline facilities-based broadband service available. The 314 residences of Attica do not have access to terrestrial based high-speed services. The estimated cost of the project is \$4,639 per establishment passed and the award request is \$3,062 per establishment.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$4,381,224.00
Loan Request: \$1,877,668.00
Other Funding: \$1,665,410.00
Status: Application Received

Description: Twin Valley Telephone, Inc. (TVT) proposes to provide last-mile fixed and mobile broadband access to underserved rural areas of north-central Kansas. Using licensed and registered wireless spectrum, TVT will leverage its existing state-of-art fiber optic network and rely upon its experienced management team in rapidly deploying affordable broadband service at speeds up to 10 Mbps. The proposed project will make affordable broadband access available to over 20,000 households, over 2,000 businesses, and 382 critical community facilities and public safety entities in the proposed funded service areas. With construction ready to begin immediately upon funding, the project will create at least 15 new jobs and provide twenty-first century infrastructure for an immediate economic boost and long-term rural economic development.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,857,441.00
Loan Request: \$619,147.00
Other Funding: \$0.00
Status: Application Received

Description: Wave Wireless of Parsons, Ks (pop. 11,514 in the 2000 census) proposes the Wave Wireless Southeast Kansas Broadband Expansion project, covering 849 square miles of rural Kansas land, the vast majority of which has no access to high speed services. This 100% rural area has an overall household density of 3.6 per square mile. Overall, the network will pass at least 72 critical community institutions. Wave Wireless has always worked with the various communities of Labette County, KS. It offers service to town governments and it offers service to schools. Most importantly, it offers service to people. Today, broadband is no longer a luxury; for most, it is a necessity. Currently, the network uses industry-standard unlicensed spectrum radios. Wave Wireless, LLC plans to deliver significant upgrades upon the receipt of stimulus grant money.

Other Funding: \$276,605.00

Status: Application Received

Description: The proposed project would provide broadband Internet service to the small rural communities of Eolia, Oven Fork, and Partridge in the Persistent Poverty County of Letcher County, Kentucky. Residents of the proposed funded service area have launched a website, petition, and letter-writing campaign, declaring, "We Deserve Broadband" (see www.wedeservebroadband.com). As the local cable TV provider serving the proposed funded service area, experienced project leaders aim to provide broadband Internet service to better serve these isolated communities of Eolia, Oven Fork, and Partridge, tucked in a valley amidst rugged mountain terrain deep in the heart of the Appalachian coalfields.

Description: The project will provide broadband service to end users in Jackson and Cow Creek, which are impoverished rural areas in the Commonwealth of Kentucky. The project will deploy a fiber to the premises architecture that will allow end users to experience broadband service at speeds of up to 18 Mbps and to enjoy the same economic, educational, and social opportunities that broadband has afforded subscribers in neighboring communities.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,190,776.00
Loan Request: \$2,224,618.00
Other Funding: \$3,165,000.00
Status: Application Received
Description: The Louisiana Delta Wireless Broadband Initiative is an important proposal for providing 3 mbps high speed wireless internet to Louisiana's most unserved region. Its southern tip borders the northern reach of Broadband IP's service region. It runs contiguously north to parishes bordering the Monroe MSA through 14 parishes in the Delta Regional Authority. These are among the poorest counties in the state and country, according to historical U.S. Census data. Broadband IP is proposing this project because it is the best positioned wireless internet service provider to serve these residents and businesses. The backbone of this last mile project will be built in accordance with permits issued by the Louisiana Department of Transportation and Development to place our transmission equipment on their microwave tower network that runs south to north directly through these 14 delta parishes.

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: Maine

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$7,125,000.00

Loan Request: \$0.00

Other Funding: \$2,403,000.00

Status: Application Received

Description: The SPX Rural Wireless Solution project is the deployment of 5 communication sites for last mile wireless broadband access in rural Maine. The illustrative coverage areas would make service available to nearly 88,000 persons. The coverage areas have a combined average population density of 9 persons/square mile. With a project cost of approximately \$200 per premise covered, the system overcomes an economic roadblock to broadband access in rural areas where the costs of running wire (cable or fiber) or installing multiple wireless transceiver sites are currently prohibitive. Broadband service will be provided by existing ISPs, thereby expanding their existing coverage areas. These initial sites can then be used as "models" for implementing the technology across Maine and nationwide.

Description: Lyric Communicationsâ€™ Industrial Heartland Broadband Initiative will build a last-mile fiber-to-the-home network to bring broadband services to underserved communities in the Lower Anthracite Coal Region of central Pennsylvania. The network will offer an affordable triple-play of voice-over-IP, video and high-speed data to 37,902 households and 2,024 businesses in Americaâ€™s first cradle of industrialization. The network is vital to spurring economic revitalization, including growth in green energy research and technology development. It will create high-tech jobs, serve public safety entities at no cost for 5 years, and provide cost-effective connectivity for public service agencies at discounted rates. The initiative's SONET-based optical core uses 288 fiber strands to yield 10 GB/s of duplex bandwidth, providing reliability, redundancy, and scalability.

Status: Application Received

Description: This project will build a fiber to the premises, last mile, active (AON) network delivering ultra broadband, synchronous data, carrier class telephony, digital multimedia, and wireless applications across Martha's Vineyard and Cuttyhunk, an unserved and under served rural area. The network includes Serving Fiber Centers connected via a fiber transport ring anchored by an island CO, accessing the mainland via a purpose-built submarine fiber cable, connecting two network operating centers (NOC) by an arrangement with the Open Cape Initiative, a Round 1 NTIA middle mile grant recipient. Backup digital microwave links to the mainland will connect directly to the company NOC where headend, data and satellite equipment reside. Open connectivity from 15Mbps to 10Gbps will be offered across all served areas to all businesses and households and discounted to community and governmental entities.

Project Title: Northern Michigan Broadband - Southwest
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Michigan
Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$7,311,079.00
Loan Request: \$7,311,079.00
Other Funding: \$0.00
Status: Application Received
Description: Northern Michigan Broadband - SW is a shovel ready economic development and broadband infrastructure project focused on unserved and underserved areas in eight (8) southwestern counties of Michigan's Lower Peninsula, and will bring state of the art high speed wireless Long Term Evolution (LTE) broadband over a 700 MHz licensed frequency, providing data services up to 50 Mb/s to over 113,000 homes, 7,626 businesses and 2,016 anchor institutions. The project has been strategically designed to provide wireless broadband to end users in rural areas that cannot economically be reached by cable or fiber connections but will support roaming Internet access via cell phones and handheld devices. The infrastructure will meet the current and future needs of the proposed service area. Funding for this project will create 184 new jobs with the total cost being \$14,622,156.

Description: Northern Michigan Broadband - NW is a shovel ready economic development and broadband infrastructure project focused on unserved and underserved areas in nine (9) northwestern counties of Michigan's Lower Peninsula, and will bring state of the art high speed wireless Long Term Evolution (LTE) broadband over a 700 MHz licensed frequency, providing data services up to 50 Mb/s to almost 112,000 homes, 12,229 businesses and 2923 anchor institutions. The project has been strategically designed to provide wireless broadband to end users in rural areas that cannot economically be reached by cable or fiber connections but will support roaming Internet access via cell phones and handheld devices. The infrastructure will meet the current and future needs of the proposed service area. Funding for this project will create roughly 190 new jobs with the total cost being \$14,968,131.

Other Funding: \$3,784,594.00
Status: Application Received

Description: AzulStar, together with private investors, partner New Mexico ISPs, local community and public institutions are seeking ARRA stimulus grants/loans for the creation of a 4G wireless broadband network for the rural and underserved areas within 5 counties in New Mexico. AzulStar will deploy mobile 2.5GHz WiMAX, which is a non-proprietary, 4th generation (4G) wireless broadband technology that outpaces all other broadband technologies for both price and performance. The innovative network will use some 60MHz of licensed spectrum at 2.5GHz to deliver fixed and mobile connections of 10Mbps and beyond. The highly advanced system will have a lasting impact on New Mexico by creating a platform for innovation and sustainable economic growth. Given the highly rural and sparse nature of the area being targeted, federal financial assistance is essential in order to make this vision a reality.

Project Title: Townships left behind in St Clair County Michigan
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Michigan

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$626,899.00
Loan Request: \$268,671.00
Other Funding: \$0.00
Status: Application Received

Description: Our project is a last mile project and will make use of 4G WiMax technology to provide broadband internet service to proposed areas of St Clair County Michigan. The project will make use of existing tower structures in the County for deployment of the service. As part of our service offering we will offer discounted service to Anchor Institutions and Small Disadvantaged Business. Included in the coverage is a county park. We will work with the County to make WIFI service available to residents while visiting the park. The equipment provider has been approved by RUS for rural deployment and is capable of speeds in excess of the NOFA requirement. Currently there are no options for broadband service in our proposed service area. One of our letters of support states that one township has contacted a cable company and was unsuccessful in bringing broadband service to their township.

Description: Boardman River Communications with TBEDC's 5 County Study, proposes a Fiber-to-the-Premise (FTTP) broadband network with a Gigabit Internet access to chronically underserved Kalkaska County and Eastern rural Grand Traverse County, MI. This 598-mile fiber optic network connects 11,238 homes, 821 businesses and 107 Critical Facilities within 17 twps covering 598sq mi. Building on Merit's Round I REACH-3MC Network, we will be open to other providers needed to enhance our Federally Recognized Recovery Zone. As a rural part of MI Lower Peninsula, Kalkaska County & adjacent Townships average 30 residents per square mile. 2000 US Census states our per capita income is \$16,309; significantly below the National average of \$30,906. Less than 10% of our population has a bachelor's degree or higher compared to the Michigan average of 21.8%. This project adds 80+ local jobs and saves 225+ local jobs

Grant Request: \$7,663,876.00
Loan Request: \$3,443,190.00
Other Funding: \$0.00
Status: Application Received

Description: This Project delivers a broadband solution using BPON FTTH and Motorola Point to Multipoint Wireless Technologies, to serve the underserved and unserved areas of Lake County, Michigan. Located in the north western part of the State, Lake County is a very rural and depressed part of Michigan. It contains three existing served areas, Baldwin and Luther, both served by AT&T with copper DSL to 18KF from their central office locations. The third Location is served by CARR Telephone. Existing services for are located within Sweetwater Township and Lake Township and serves Telephone, Broadband Services as well as Cable Television. Carr proposes to extend its serving areas into the underserved and unserved areas of Lake County. Without this funding there is little chance that residents would be able to access high speed broadband services within the existing underserved lake community areas.

Description: The Eastern Upper Peninsula Fiber Project is a coalition of local government working with private businesses to bring fiber to the rural EUP of Michigan. This is a combined cooperative effort between government agencies and private business to develop the comprehensive plan for the fiber transport network. This network will be an open network that will allow multiple providers to get their services out to everyone in the rural EUP of Michigan. Chippewa County is the lead applicant for the grant to build a cost effective Last Mile fiber to the Home network. Luce County and Mackinac County have joined Chippewa in their Grant application to cover the entire area in the fiber network. These three counties share borders and many public service, law enforcement and health agencies are linked between the counties. This network will cover 2,363 miles and reach 14,950 homes in the three counties.

Project Title: Comprehensive Community Application for Southern Michigan WiMAX
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Indiana, Michigan

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$20,000,000.49
Loan Request: \$20,000,000.51
Other Funding: \$8,793,549.00
Status: Application Received

Description: AzulStar, together with Clearwire, private investors and local community and public institutions are proposing the creation of a 4G wireless broadband network encompassing the rural and underserved areas within 17 counties in Southern Michigan. The network will utilize mobile WiMAX at 2.5GHz, which is a non-proprietary, 4G wireless broadband technology that outpaces all other broadband technologies in terms of both price and performance. The innovative network will use some 60MHz of licensed spectrum at 2.5GHz to deliver fixed and mobile connections of 10Mbps and beyond. The highly advanced system will have a lasting impact on the target areas by creating a platform for innovation and sustainable economic growth. Given the highly rural and sparse nature of the area being targeted, federal financial assistance is essential in order to make this vision a reality.

Description: The Fond du Lac Wireless Broadband Project would create a wireless broadband/high speed Internet system on the Fond du Lac Reservation. The system would provide internet access to over 300 homes, and several community facilities. The procurement of high speed internet on the Reservation will be used as an economic tool and assist people to educate themselves, open a new marketplace for goods and services, create a more marketable workforce and open new job opportunities. The project will require the construction and installation of six towers and base station. Cost estimated for the towers and the base station is \$1,416,792.00. A more detailed scope of work is located in the attachments with the "FDL Wireless Study."

Project Title: Southeastern Minnesota Open Fiber Initiative (SMOFI)
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Minnesota

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$33,999,578.00
Loan Request: \$15,275,173.00
Other Funding: \$0.00
Status: Application Received

Description: The Southeastern Minnesota Open Fiber Initiative (SMOFI) is an "Open Access" Fiber-to-the-Premise (FTTP) project, which will connect virtually every home, business, community anchor institution and critical facility in the Southern Minnesota counties of Steele and Dodge, and parts of Rice, which are predominantly unserved or underserved. The project will deliver broadband speeds of up to 1Gbps to every premise served and sets aside 25% of earned revenues for future expansion to rural and remote areas. The project will pass 16,414 households, 1,580 businesses and 515 Community Anchor Institutions and Critical Facilities. The project will be a critical part of the Mayo Clinic's "BEACON" rural tele-health initiative. SMOFI will implement specific and substantive programs to deliver service to, and support community anchor institutions abilities to deliver services to the public.

Description: Fiber to the Home project leveraging the NESC Northeast Middle Mile Project funded in Round 1. This project will provide fiber based broadband to 6,235 households in one of the sparsest and northern most counties in MN. The project employs a new public sector management model that will engage and have strong local incumbent and cable carrier support. The model is unique in that nothing like it has been proposed before and stands to be the future model for deploying networks in sparsely populated, large rural areas. The model provides for both a "unbundled fiber to the home" carrier service and a bundled "lit" service to support low income and those that cannot afford along with connecting critical services to the regional network. It also has strong participation with the funded NESC Middle Mile Fiber Project and other ARRA funded projects in the region.

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Missouri

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$32,962,259.00
Loan Request: \$32,962,260.00
Other Funding: \$700,000.00
Status: Application Received
Description: The broadband solution proposed will be a fiber-to-the-home network engineered to deliver 100 mbps to every home and business in the cooperative service territory, enable smart grid technologies, deliver high definition television, VoIP telephony, distance learning, telemedicine, and other advanced broadband applications to all or part of nine counties in Missouri. In addition to cooperative members, Co-Mo will extend the fiber network to 14 additional schools outside of Co-Mo's traditional service territory. The proposed service area includes more than 26,000 households, 500 businesses, and 325 critical community facilities. This 4,000 mile fiber network will pass 56 public safety facilities, 164 government facilities, 43 schools, 16 health facilities, and four libraries. This area encompasses more than 2,300 underserved square miles in rural Central Missouri.

Description: The SWMRBI project is dedicated to the wireless delivery of high quality value priced broadband Internet services to rural families and businesses and high quality discounted broadband Internet services to Community Anchor Points. This will be accomplished with terrestrial fixed wireless technology utilizing the Motorola Canopy platform operating in the Part 15 license exempt frequency bands. The SWMRBI Phase I-III service area is 100% rural and will cover four counties of which two are persistent poverty counties. In addition, it includes portions of eleven other counties of which two more are persistent poverty counties. Our broadband services will pass 45,782 households, 7,484 businesses and 404 Community Anchor Points in 4,563 square miles of area that serves 37 Census Designated Places and a population of 118,569.

Description: The ShowMe Broadband is a project of St. Louis Broadband, LLC. We propose to serve 10 counties, including 3 persistent poverty counties, within Southeast Missouri with 116 Microwave towers in an area where so few exist. Our network of 116 towers and a new Network Operations Center (NOC). Our NOC will be built with redundant fiber connections the St. Louis NAP located at 900 Walnut St., St. Louis, Missouri. As well as one High Speed Microwave link to a third fiber provider with a direct fiber path to Kansas City. This path will be primarily dedicated to our Public Safety network. This allows us an opportunity to PROACTIVELY react to a catastrophic event for this area. Our PROACTIVE communications network will backup our local area, and the City of St. Louis in helping restore communications and data networks in the event of a disaster.

Description: This project will provide wireless broadband services to areas of Eastern Montana where NO broadband - wireline or wireless - is currently available. This is an extremely rural and remote area covering over 8,800 SQUARE MILES with a density of less than 0.07 households per square mile. In an effort to propose a cost-effective terrestrial broadband solution to serve this area, we plan to equip existing digital cellular sites with 3G broadband services (capable of future upgrade to 4G) to offer both mobile and fixed wireless broadband services. The mobility of the service will provide additional benefits to vast numbers of consumers and businesses traveling through the area, as well as to emergency service providers. The project will also offer infrastructure and services to Interoperability Montana, the State's public safety radio interoperability consortium.

Description: Montana Opticom, LLC will utilize Fiber to the Premises (FTTP) to expand high-speed broadband to rural communities and rural areas within Gallatin County, Montana. Affordable and reliable broadband will be extended to 7,746 households 4,118 businesses, and 58 critical community facilities for a total of 11,922 premises passed within the proposed service area. Access to high speed broadband will escalate economic development in rural Montana, enhance quality of life to Montana Opticom subscribers, as well as provide connectivity to life saving communications and technologies utilized throughout southwest Montana. Additionally, improving educational, critical community and public safety service offerings will positively impact residents and visitors.

Project Title: Ft. Peck Reservation FTTP

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: Montana

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$23,394,510.00

Loan Request: \$2,599,390.00

Other Funding: \$566,000.00

Status: Application Received

Description: This project will provide Fiber to the Premise (Home) to all locations within the Fort Peck Indian Reservation exchanges of Brockton, Froid Rural, North Poplar, North Wolf Point, and Frazer that do not currently have access to 5Mbps (up and down combined). This project will also bring Fiber to the Premise to the exchange of Poplar which is the headquarters of the Fort Peck Assiniboine-Sioux Tribes. The service will be accessible by each location and delivered by GPON and/or active ethernet topologies. This project will serve approximately 3,279 locations, roughly 10% being businesses.

Description: NCCN is seeking BIP funding to integrate the service capacity and rural relationships of two institutions of higher education with partners from private industry that know how to develop, construct, maintain and operate a broadband network. This project spans over 107,000 rural square miles, including six Indian reservations. This two-tiered project will target community support, distance education and telemedicine issues in over 100 larger rural communities, with plans to eventually provide high-speed broadband access to up to 840 communities region-wide. Based upon this larger vision, the Broadband Mapping Tool has passed 156,157 businesses and households in the region, and we have estimated a total of 1110 critical community facilities and public safety entities in Eastern Montana. The stretch goal of this network is to reach at least 50% of potential subscribers.

Project Title: Scott St. Pryor Middle Mile
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Montana

Project Type: Middle Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,888,015.00
Loan Request: \$962,672.00
Other Funding: \$79,500.00
Status: Application Received

Description: The Scott St/Pryor Middle Mile Broadband Connectivity Project will create a fiber optic transport network that connects the Crow Indian Reservation communities of Pryor, Saint Xavier and Fort Smith to existing fiber transport networks in Lockwood, MT near Billings, MT. This project will also bring FTTP type services to 26 anchor institutions including tribal, state and federal entities. The infrastructure will allow Project Telephone to link to other backbone providers. This project will promote rural economic development and provide interconnection points to underserved areas. It will also stimulate broadband growth by providing interoffice transport, backhaul, internet connectivity and/or special access using fiber. This redundant network is vital in the event of a network outage, such as a fiber cut, in order to keep critical services, like public safety, operational.

Status: Application Received
Description: Nevada is a uniquely rural state that includes some of the very last “frontier” communities in the USA. Most of the population living outside of Washoe and Clark Counties have, to date, been living without access to true broadband internet service. To resolve this iniquity, ANTC is proposing a state of the art microwave radio backbone; a Middle-Mile system to provide significant bandwidth to WISPs, anchor institutions and enterprise users in 15 PFSA™s where it does not exist or is grossly cost prohibitive to access today. Utilizing cutting edge LTE/WiMax ready technology, the system will provide highly reliable and scalable broadband transport to enhance existing but limited fiber-optic cable or provide transport where fiber-optic cable is unavailable. 186 CCF™s and PSF™s along with more than 16,500 premises will have access to the system via local ISP™s using ANTC™s proposed network.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,014,718.00
Loan Request: \$5,219,400.00
Other Funding: \$0.00
Status: Application Received
Description: Agavue, LLC, a New Mexico based ISP ("Agavue") proposes a last-mile, high speed WiMax broadband wireless project with connection speed of up to 20Mbps to serve approximately 12,425 households, 2,698 businesses and 85 community anchor institutions and three Native American pueblos in Taos, Colfax, Rio Arriba and Sandoval counties in rural North New Mexico. All proposed funded service areas are rural and underserved according to NOFA definitions. WiMax infrastructure is the most cost-effective, high-speed broadband solution for unserved and underserved businesses and residents in the proposed funded service areas. RUS has previously approved and begun funding of Agavue's WiMax project in Mazano & Cerrillos, New Mexico. Benefits for the targeted areas are substantial, including job creation, medicine, economic development and distance learning.

Status: Application Received

Description: Computer Networks Service Professionals (CNSP), is a service disabled veteran-owned business offering broadband services to Indian Reservations, Pueblos (tribal lands) and other communities in north central New Mexico. CNSP proposes to deploy a shovel-ready, sustainable, wireless broadband Last Mile network to provide broadband services in a service area comprised of 5 counties, 4 Indian Reservations, and 7 Pueblos in north central New Mexico covering Congressional Districts 1, 2 and 3. The proposed funded service areas are comprised of high percentages of minorities (48% Hispanic, or 4 times the national average, 8% Native American, or 8 times the national average) and persons living below the poverty line (17%, 1.5 times the national average).The proposed network will deliver broadband services to rural, underserved communities while supporting healthcare, education, and public safety.

Project Title: Broadband Services to Mora County, NM
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: New Mexico

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$8,299,782.00
Loan Request: \$3,557,050.00
Other Funding: \$0.00
Status: Application Received
Description: This project will fill the need for present and future bandwidth requirements by placing fiber to rural subscribers. This project will also replace old and deteriorating copper telephone plant that is nearing or has reached the end of its useful life. This project will be extending full fiber capabilities to rural establishments and give them the increased bandwidth comparable with any urban establishment. This last mile project, along with the middle mile component will allow La Jicarita to provide affordable, higher speed last mile services to a larger majority of their existing subscriber base that they would otherwise not be able to accomplish. In addition, La Jicarita would have future opportunities not yet recognized by being connected to a statewide backbone ring that will eventually broaden La Jicarita's ability to receive and extend services throughout the state of New Mexico.

Loan Request: \$9,023,289.00

Other Funding: \$0.00

Status: Application Received

Description: Penasco Valley Telephone Cooperative, Inc. (in a consortium with co-applicant PVT Networks, Inc.) is proposing a fixed and mobile last mile solution (with a middle mile component) to address underserved and unserved rural areas of southern and central New Mexico. PVT NetWorks, a subsidiary, owns 700 MHz spectrum that covers the proposed area. The proposal includes middle mile fiber and microwave equipment to connect the sites and to reach an alternate internet POP for redundancy and lower cost access, reducing access costs by more than 50%. The proposed fiber and fixed wireless solution will enable the delivery of broadband services to virtually all critical community facilities across the service region's 10-county area. A benefit of this project will be economic growth in this rural area, where the latest Census data shows that 21.4% of its residents live below the poverty line.

Project Title: Akwesasne Community Broadband Initiative by Flint Communications
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: New York

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,092,240.00
Loan Request: \$2,268,047.00
Other Funding: \$0.00
Status: Application Received
Description: Flint Communications, LLC (â€œFlintâ€) is a 90% Native American owned New York Competitive Local Exchange Carrier (CLEC) proposing to construct 209 miles of fiber optic cable and purchase, design, engineer and deploy the necessary equipment and electronics to deliver Fiber to the Premise (â€œFTTPâ€) broadband services to 1,600 households, 100 businesses-including socially and economically disadvantaged businesses, and 13 anchor institutions in the remote Akwesasne region immediately south of the Canadian border.

Project Title: Last-Mile High Speed Broadband in Greene and Columbia Counties
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Massachusetts, New York

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$3,473,919.00
Loan Request: \$0.00
Other Funding: \$1,488,818.00
Status: Application Received
Description: Mid-Hudson Cable will bring High Speed Broadband to over 11,000 homes and businesses in this rural region, which is located in the 75 mile corridor between New York City and the state Capital in Albany. High speed access is critical to the region's economic development. Existing Businesses expect high speed internet connections while attracting new businesses to this region will require broadband infrastructure. The arrival of high technology and nano technology industries to the north like AMD's semi-conductor fabrication plant puts pressure on the area to provide suitable housing and telecommunications infrastructure.

Project Title: Connect Rural St. Lawrence
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: New York

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$587,007.00
Loan Request: \$251,574.00
Other Funding: \$394,730.00
Status: Application Received
Description: New Horizons Wireless will bring fixed wireless broadband services to more than 9,000 residents, businesses and critical community institutions in rural St. Lawrence County, New York that currently must rely on dial-up access to the Internet. Without access to the cost-effective broadband services to be provided by this project, these citizens and communities will be unable to compete for the kinds of jobs and educational opportunities that are available in the 21st century. The very low population density of the roughly 1,000 square miles covered by this project means that there is simply no cost-effective broadband solution except wireless. Our company is local and is committed to helping the county improve the lives of its citizens -- our neighbors. This project will deliver exactly the kind of infrastructure and benefits envisioned by the 2009 ARRA.

Project Title: Oswego County, NY - Next Generation 911 & Last Mile Broadband Services
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: New York

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$12,782,829.00
Loan Request: \$29,826,602.00
Other Funding: \$888,690.00
Status: Application Received

Description: The Syracuse based company, New Visions PLC, Inc., proposes "Next Generation 911 & Last Mile Broadband Services Project" to extend its FTTH broadband services to Oswego County, New York. At the same time, it will create an interoperable emergency communications system connecting vital tower sites into an integrated communication network. Deployment of a countywide FTTH network infrastructure will provide 100% broadband availability in a truly ubiquitous, scalable system with the speed, service, and reliability that only fiber can offer. Our model of end-to-end coverage is critical to accomplish the public safety, e-government, distance learning, and telemedicine programs that our rural citizens are aware of, but have yet to benefit due to the Rural America digital divide.

Project Title: Broome Tioga Broadband Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: New York

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,644,840.00
Loan Request: \$548,280.00
Other Funding: \$0.00
Status: Application Received
Description: Plexicomm's Broome Tioga Broadband Project will build 25 Last Mile WiMAX tower sites and upgrade its existing core network. The build out will provide the latest wireless broadband technology to needy rural households. Plexicomm has successfully deployed wireless broadband services in the region since 2003 and looks forward to the opportunity to reach the underserved in Broome and Tioga Counties. Rural NY is plagued with communities having broadband only available to those in town leaving a good majority of the residents without for a lack of population density or difficult wire line deployments. Plexicomm will overcome these obstacles with proven technology and skills learned over the past 7 years while deploying wireless broadband in the region. This project places Plexicomm in the position to further its reach into rural NY with its Open Network design.

Project Title: Northern New York Open Access Wireless Network
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: New York

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$725,680.00
Loan Request: \$241,893.00
Other Funding: \$0.00
Status: Application Received

Description: This project provides wireless high speed internet access with a WiMAX offering in the 3650 MHz spectrum (IEEE 802.16d standard) to rural unserved and underserved areas of St Lawrence County, New York and the 1000 Islands Region of Jefferson County. It leverages an existing wireless network, provides competitive rates, creates jobs, in a cost effective way, and establishes an open access network which will allow competitors to deliver more services, resulting in better technology, enhanced service, and a decrease in costs for the end-user. Finally it provides e-commerce training for small businesses and entrepreneurs to promote new economic activity for the region. This project would not be possible but for the BIP combination grant and loans.

Project Title: BIP- Mega Gigabyte Broadband by Water Last/Middle mile project for NYC metro and upstate New York
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Connecticut, Massachusetts, New Jersey, New York, Pennsylvania, Rhode Island, Vermont

Project Type: Middle Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$264,000,000.00
Loan Request: \$132,000,000.00
Other Funding: \$1,000,000,000.00
Status: Application Received
Description: USAC Spin Number 143012436 The deployment of Mega Gigabyte Broadband along waterways in NYC to facilitate the 1 Gigabyte to the home infrastructure needs in the U.S. Gigabyte to the home is achieved at a lower cost and short timeline by this patent pending deployment, which does not replicated any existing infrastructure. WNIS has authorization to issue 3 Billion in Debt for Infrastructure in NYS. This BIP application represents 75 % rural deployment along waterways and canals in NYS. The 1 Gigabyte infrastructure will allow individuals to perform work at home and have significant economic GDP impacts by reducing commuting time and increasing productivity statewide. The concurrent deployment of kinetic turbines, fuel cell and microturbine power technologies will provide for reduction of environmental pollutants while provide additional streams of income from the power generation capacity.

Project Title: Surry Telephone Membership Corporation RUS BIP Last Mile Project Application for Round Two

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: North Carolina

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,529,494.00
Loan Request: \$2,372,354.00
Other Funding: \$0.00
Status: Application Received

Description: Surry Telephone Membership Corporation is the ILEC for rural areas of Surry, Stokes and Davidson Counties in the Piedmont Region of North Carolina. Budgetary constraints and the physical limitations of our existing copper network have not allowed STMC to provide more than 3 Mbps to our most rural areas. With the help of the BIP program, STMC plans to offer broadband speeds of 6 Mbps and greater to those underserved customers. This will be achieved by installing a "future bandwidth proof" Active FTTH network from our existing wirecenters directly to the customer premise. STMC will install access electronic equipment, in these wirecenters and at the customer premise, that already has proven and reliable service. The Active FTTH will utilize ribbon fiber cables as the backbone of the network. The project will pass 2,731 structures, of those 2,377 are underserved.

Project Title: TriCounty Telecom FTTP Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: North Carolina
Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$10,610,410.00
Loan Request: \$3,536,805.00
Other Funding: \$2,068,225.00
Status: Application Received
Description: Tri-County Telephone Membership Corporation (TCTMC) dba TriCounty Telecom proposes to build a Fiber to the Premise (FTTP) network. This will provide high speed data, interactive communications, entertainment services and voice services to residential customers, business customers and critical community facilities in rural areas. The areas served are within northeast Beaufort County and parts of Hyde and Washington Counties. TCTMC will use the funding to build-out and deploy a GPON network with inherent capability to deliver 80 MB per premise served. This project will pass approximately 5,233 residential, business and critical community facilities.

Status: Application Received

Description: Wilkes Telephone Membership Corporation, Inc. (WTMC), a non-profit cooperative telecommunications company headquartered in Wilkesboro, North Carolina, dba Wilkes Telecommunications Inc., seeks funding to provide last mile fiber optic high speed broadband, video, and voice services to underserved rural areas in Wilkes County, North Carolina. The project has strong community support and will provide sustainable services to promote rural economic development in the area. WTMC is currently building fiber to the home for its customers in the more dense portions of its four exchanges in Wilkes County with the assistance of an RUS loan but will use these funds to cover the less dense areas of its exchanges that are normally uneconomical to serve. WTMC plans to work with the NC statewide network to improve the availability of low cost Internet access to the more rural portions of the state.

Description: Yadkin Valley Telephone Membership Corporation is a non-profit rural cooperative serving the vast majority of Yadkin and Davie counties, and portions of Iredell, Wilkes, Rowan and Alexander counties in Western North Carolina. The Cooperative is seeking funds to deploy a high-capacity, diverse, Last Mile, Fiber-to-the-Home (FTTH) network that will provide affordable, advanced services to 5,783 households, businesses, community anchor institutions, and public safety facilities. The Yadkin Valley Rural FTTH Project service area within the Cooperative's service territory is composed of small, sparsely populated communities without High Speed Access that are in critical need of sustained economic development, support for anchor institutions and the 57 jobs that the Yadkin Valley Rural FTTH project will create.

Project Title: CEI Broadband Infrastructure Project

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: North Dakota

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$5,782,360.89

Loan Request: \$5,782,360.89

Other Funding: \$3,854,908.00

Status: Application Received

Description: The CEI Broadband Infrastructure Project consists of two PFSA's in rural Dickinson and Belfield, western North Dakota. The Project is a FTTH expansion to CEI's existing fixed wireless data system in those areas. CEI will build fiber to the least populated areas of those communities where it has been cost prohibitive to deploy FTTH and sometimes even DSL. In the PFSA's, residences currently only have access to dial-up Internet from Qwest or wireless Internet from CEI at slower speeds of 4 Mbps. Under the Project, CEI will build out its facilities to pass all 1421 households in the PFSA's, and will be able to provide voice and video, as well as data services at speeds up to 100 Mbps. The CEI Broadband Infrastructure Project will require approximately 21 new jobs to build and operate the system.

Grant Request: \$6,601,401.00
Loan Request: \$2,829,172.00
Other Funding: \$0.00
Status: Application Received

Description: MLGC is proposing a last-mile broadband project, using Fiber-to-the-Home (FTTH) technology, to bring affordable and reliable broadband access to underserved rural counties in eastern North Dakota including Richland, Ransom, Cass Grand Forks and Steele. MLGC will be building facilities to 835 households and 110 businesses for a total of 945 premises passed. MLGC understands the value of high-speed broadband service to enhance the quality of life of its subscribers, spur economic development, and improve services delivered by rural communities. In essence, MLGC is seeking to deploy its FTTH network as rapidly and extensively as possible because the service they provide are vital to future of these rural communities. By obtaining grant and loan funding through BIP, MLGC can accelerate its deployment and ensure that even the least densely populated areas get this high-quality service.

Project Title: OBI-1 (Oklahoma Broadband Initiative- Area 1)

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: Oklahoma

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$22,453,595.00

Loan Request: \$22,453,595.00

Other Funding: \$0.00

Status: Application Received

Description: Cross Telephone Company will provide FTTH and wireless broadband service to underserved areas of ten counties in Eastern and Southeastern Oklahoma. The project passes 47,920 households and 4,470 businesses. The project also passes portions of at least two Native American tribal lands and will provide services to 158 critical community facilities. Cross is also initiating a project called BOLT (Broadband for Oklahomans Learning with Technology). The program fosters innovation by utilizing wireless broadband connectivity to learning devices that go home with students in Senior High School and Secondary Education. It utilizes wireless Netbook applications.

Project Title: Southeast Oklahoma Broadband Choctaw Tribal and Rural Residents
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Oklahoma

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,055,906.00
Loan Request: \$1,099,009.00
Other Funding: \$0.00
Status: Application Received
Description: This project proposes to blanket 750 square miles of rural and economically distressed communities with the latest in WiMAX broadband service that today is 100% unserved. The project will offer a Broadband Lifeline Program. The Program will enable low income families who qualify for Lifeline voice plans to receive discounted broadband services. This project will create hundreds of long term job opportunities and will offer discounted service to all critical community facilities.

Project Title: Rural Comanche County Oklahoma Fiber to the Home Project
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Oklahoma

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,607,247.00
Loan Request: \$536,035.00
Other Funding: \$81,277.00
Status: Application Received
Description: This Project consists of installing a GPON FTTH network in Southern Comanche & Northern Cotton Counties in Oklahoma. These areas, currently served by AT&T for voice service, lack the wireline broadband service that would enable them to compete in today's economy. This project consists of 1,867 homes of which 100% are completely unserved. The proposed funded service area includes many homes that are well below the poverty line, in the former Kiowa-Comanche-Apache Reservation in southwestern Indian Territory. Such a project would revitalize many of the communities in the area, in addition to saving and creating hundreds jobs. Medicine Park Telephone Co, Inc., a family owned ILEC and RUS partner on an assortment successful projects, leads a team of six companies for this shovel-ready project.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$6,828,101.00
Loan Request: \$2,926,329.00
Other Funding: \$1,615,222.00
Status: Application Received
Description: This project expands the service area of a nearby first round BIP last mile award to Pine Telephone Company (EasyGrants 1257). The proposed funded service area would have been included in the first round application but for the limitations of the "remote" definition. The project will use innovative and proven wireless technology to deliver affordable broadband service to portions of entirely rural and economically disadvantaged Southeast Oklahoma (within the Choctaw Nation) to create economic growth and jobs and enhance education, health care and public safety. Pine Telephone Company will keep rates affordable and will invest free cash flow to expand the system.

Grant Request: \$15,081,958.00
Loan Request: \$15,081,959.00
Other Funding: \$0.00
Status: Application Received
Description: The network proposed by PTC is a hybrid design including a fiber to the home (FTTH) and fiber to the node (FTTN) solution for their existing service area. This proposed network will enable PTC to provide rural subscribers with services typically available in only the most urban areas of our country. In addition to enabling data rates of up to 40 Mbps, the network will enable video delivery via affiliate head-end facilities. Wireless microwave backhaul is proposed in some extremely rugged portions of the network. Subscribers in these locations will receive the same data services provided to the FTTN subscribers. The proposed soft switch will enable PTC to convert subscribers to voice over IP (VoIP), further enhancing network utilization. Additionally, the proposed network will provide much needed backhaul for the wireless network of Easygrants 1257 awarded in round one.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$24,971,934.00
Loan Request: \$10,958,906.00
Other Funding: \$0.00
Status: Application Received
Description: Pioneer Telephone Cooperative, Inc. will provide FTTH broadband service to remote areas within its 76 western Oklahoma telephone exchange boundaries. Pioneer can provide service to 3952 households, 160 businesses and 5 anchor institutions/public safety facilities using existing infrastructure from higher populated areas to reduce the overall capital costs for the 43 PFSA's to be built. With 673.41 miles of fiber construction, customers will be able to receive the same data, voice and video service as provided in the rural communities, schools and hospitals. The cost for the project of \$35,930,840 and will give the rural areas a lifeline to customers to allow the use of affordable broadband service.

Status: Application Received
Description: This Fiber to the Home project will provide 335 housing units and 20 Businesses of Terral Oklahoma and southern Jefferson County Oklahoma with State of Art telecommunications and High Speed Broadband service, replacing outdated and deteriorating copper wire facilities and aged unlicensed wireless broadband facilities. Terral Oklahoma and the surrounding area is an economically depressed agricultural area thirty miles from the nearest economic center. The community does not have many of the services needed for quality of life including a bank, a grocery store or other shopping. The population depends on the Internet for many of their goods and services. This project will give the residentâ€™s access to enhanced voice services, video programming and high speed broadband Internet services. These services are vital to the sustained viability of the community.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,338,566.00
Loan Request: \$0.00
Other Funding: \$339,300.00
Status: Application Received

Description: The project plans to greatly expand and enhance our current broadband last mile delivery microwave system to additional homes and businesses in both the unserved and underserved parts of the county. With this expansion we will be able to reach approximately 1771 Housing Units which have no current broadband availability and 3739 Housing Units who only have low speed broadband access. Our technology allows for combined upload/download speeds in excess of 5 Mbit/sec for these households. We will also provide a more inclusive broadband internet delivery system which allows customers to purchase service in smaller increments, to serve the lower income and part time residents in rural Tillamook county Oregon. Finally we intend to provide cameras at strategic locations throughout the county that will allow county emergency services and law enforcement personnel access to the images.

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Oklahoma, Texas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,374,404.00
Loan Request: \$1,017,602.00
Other Funding: \$248,160.00
Status: Application Received
Description: Xanadoo Broadband, LLC (the "Applicant") is proposing to build a fourth generation (4G) WiMAX mobile broadband wireless network using licensed spectrum in the 2.5 GHz frequency band to serve rural, unserved and communities without High Speed Access in northeastern Texas and southeastern Oklahoma (the "Proposed Project"). Internet service will be provided in all or parts of the following counties: Delta, Fannin, Lamar, and Red River, Texas and Pushmataha, Choctaw, and Bryan, Oklahoma. Broadband internet services will be made available to 23,222 households and 2,621 businesses in the coverage area.

Grant Request: \$6,889,299.00
Loan Request: \$8,611,624.00
Other Funding: \$1,722,325.00
Status: Application Received
Description: This project provides high speed broadband to the economically disadvantaged Appalachian area of the rural Upstate area of South Carolina. It meets the objectives of The ACT, creates dozens of jobs, and brings broadband to areas where none now exists, nor will any exist for the foreseeable future, without this requested funding. This initiative creates an ubiquitous WiMAX broadband network providing 5+ Mbps service to thousands of rural homes, businesses, and critical community facilities. The majority of this region has no access at all to high speed broadband. CommunityConnect will offer heavily discounted rates to essential community anchors and institutions and free broadband to dozens of community centers.

Grant Request: \$6,132,260.00
Loan Request: \$6,132,260.00
Other Funding: \$12,264,520.00
Status: Application Received

Description: This project aims to deploy 3G UMTS fixed and mobile wireless broadband coverage at speeds of at least 7.2 Mbps down and 3.6 Mbps up, in 11, primarily rural, eastern Illinois counties with limited broadband penetration. The proposed funded service area covers 26,605 households and 7,827 businesses. Consideration was made to remove areas within these counties that were already covered by current RUS borrowers or Round 1 last mile awardees. The applicant is already an established wireless operator in Illinois, serving its customers since 1991, and will leverage its existing spectrum, assets and experience building and maintaining wireless networks to complete this project. The company will also upgrade its backbone to a fiber-optic network utilizing existing providers in the area. This upgrade will assure reliability for customers and allow the company to accommodate increasing data needs.

Status: Application Received

Description: The Meriwether Lewis Electric Cooperative 2010 Fiber Ring Project is a middle mile fiber optic transport backbone network to be installed in rural areas in the western, middle Tennessee region. It is essential to Smart Grid initiatives and will provide a critical communications path to support SCADA and AMI systems. It will also benefit area communities. Egress points along the main transport route will be used to facilitate services to community anchor facilities as well as allow last mile providers an opportunity to offer low cost broadband service to previously unserved areas. Revitalized economic development, job creation and retention, improved connectivity for educational, government, medical and industrial facilities are just some of the results this project can stimulate.

Status: Application Received
Description: Twin Lakes Tel Coop Corp (TLTCC) proposes a fiber-to-the-premise project that will provide advanced broadband services to rural exchanges of Byrdstown, Celina, Moss & Clarkrange, TN. TLTCC will also collaborate with an ARRA recipient as detailed in this application. The proposed FTTP project will allow for the highest quality & broadest range of telecom services available, as well as the max bandwidth available today with FTTP technology to their subscribers. This project will promote economic development in rural areas that have consistently higher than average unemployment rates & areas that are in a persistent poverty county. The project will create/sustain jobs directly by the construction & operation of the network, as well as indirectly through equipment, raw materials & service industries. For many of those who will be impacted by this project, it is a matter of economic survival.

Project Title: Volunteer Fiber Backhaul Network South

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: Tennessee

Project Type: Middle Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$2,365,000.00

Loan Request: \$1,025,000.00

Other Funding: \$598,039.00

Status: Application Received

Description: The Applicant, Volunteer Energy Cooperative, proposes to continue build out on a Middle Mile fiber optic backhaul network in its southern service area that brings Broadband and Smart Grid infrastructure to strategic locations in Southeast Tennessee with specific focus on over 37K households and over 15K businesses. The project will bring the infrastructure to existing electrical substation sites that were built over the years to extend electrical service to rural areas. Strategic sites in the network will be provisioned with a solution to extend broadband over power line (BPL). The fiber backhaul network will deliver an average nominal capacity of 10 Gbps with ability to scale higher. The Applicant seeks an infrastructure grant to build out a 165 mile middle-mile broadband network passing over 400 critical community facilities and public safety entities.

Project Title: Backhaul Middle Mile
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Texas
Project Type: Middle Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$3,661,485.00
Loan Request: \$1,220,495.00
Other Funding: \$0.00
Status: Application Received
Description: The proposed project is to provide customer requested affordable increased broadband services to extreme rural areas of Texas. The existing communication facilities limit, and in some cases prevent, provision of FCC mandated high speed broadband service. Present backhaul expenses limit us to providing minimum required bandwidths and because of sparse population and long rural loops, our customers will be unable to afford the rising cost of broadband in the future. Increased speeds are needed to meet current and future customer demands as well as regulatory standards. Building fiber facilities to adjacent, larger communities would reduce backhaul costs by one half and provide a platform to increase our bandwidth 450%. The new facilities will enable rural customers the advantage of connecting for online education, telecommuting and competing for jobs otherwise unavailable.

Grant Request: \$9,686,925.00
Loan Request: \$3,228,975.00
Other Funding: \$0.00
Status: Application Received

Description: The Awesome Net Rural Expansion Project is a chance to change the opportunities for the people of 9 counties in South Texas. The proposed funded service area is almost all rural area with the exception of Victoria, Texas. Victoria is in the middle of an Internet desert. Victoria has no tier 1 carriers and the surrounding area has few Internet options. This proposal would bring affordable internet service from the closest tier 1 Internet carriers in Corpus Christi, Texas through wireless towers that double as access points for last mile Internet service. This project is the most cost effective way to get high-speed Internet service to the area. Awesome Net, Inc knows that the economic advantages of affordable high speed Internet will rival the rural electrification of this area in the 1930s. Awesome Net, Inc. is proud to be part of the effort to improve our communities.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,944,373.00
Loan Request: \$833,303.00
Other Funding: \$814,000.00
Status: Application Received

Description: The project will provide middle mile fiber and transmission facilities that will enhance broadband services in Blossom, TX making it available to unserved/underserved customers in remote, rural areas in NE Texas. BTC has obtained an RUS loan to provide FTTH in their exchange. The proposed 26.5 mile route of middle mile fiber facilities will enable the FTTH facilities to deliver significantly greater bandwidth at a reasonable cost. By leveraging the middle mile fiber with wireless, last mile facilities, the project will enable BTC to provide, affordable broadband service to households, businesses and critical community facilities currently lacking high speed broadband service. Broadband service potential will exceed 5Mbps to all Blossom wireline customers upon completion. Wireless customers will be offered packages up to 3 Mbps along the middle mile route that is currently unserved.

Program: Broadband Initiatives Program (BIP)

Proposed Project Area: Texas

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$2,821,923.25

Loan Request: \$1,267,821.75

Other Funding: \$0.00

Status: Application Received

Description: The Rock Solid Internet Expansion Project (RSIEP) will deliver much needed service to rural lands that are currently underserved, using both tried and true technologies and the latest in WiMAX equipment. In addition, this project will deliver voice services, a product that we already offer. We believe that the combination of offerings will increase broadband adoption rates in the proposed funded service area. We are often asked, "How can your company provide high-speed Internet when larger companies can't?" The answer is: They can, but it would cost them more money to do it than they are willing to spend to put high-speed Internet in your neighborhood or community. We are doing it for you RIGHT NOW!

Grant Request: \$9,669,095.00

Loan Request: \$4,143,898.00

Other Funding: \$0.00

Status: Application Received

Description: The Lake Somerville Broadband last-mile project will allow Reveille Broadband to deploy broadband infrastructure and make available affordable, high-speed internet, voice, and video services to approximately 3,200 premises, including over 1,000 businesses and 38 community anchor institutions, in 20 rural Texas communities in the Lake Somerville and Chappell Hill proposed funded service areas. The existing cabled areas within the service areas will be upgraded with the installation of optical nodes fed by fiber optic cable which will segment the system into small, easy to maintain and service sections. The remaining areas in the proposed service areas will be fiber-to-the-home (FTTH). The project will provide needed broadband services and create the potential of increased business growth, public safety services and quality of life for the residents and businesses of rural central Texas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$1,306,375.62
Loan Request: \$586,922.38
Other Funding: \$0.00
Status: Application Received
Description: Electronic Corporate Pages, Inc. (ECPI), in business since 1995, proposes the Central Texas Rural Wireless Expansion Project, serving a significant rural area that is sparsely populated and neglected. This project will offer over 3 Mbps in aggregate (upstream and downstream) to an area with an average household density of 10 per square mile. Using the latest in available backhaul technology and proven network management systems, ECPI proposes to build a solid and reliable network for Central Texas of a quality that only the stimulus funds will allow.

Proposed Project Area: Texas

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$6,665,526.00
Loan Request: \$6,937,588.00
Other Funding: \$0.00

Status: Application Received

Description: The agricultural area of Texas south of San Antonio has long lagged behind the rest of the state in access to technology. This is a significant barrier to the development in the region. The recent expansion in natural gas exploration in the region has created opportunity for change. The community can only reach the outside world at high speed if they are fortunate enough to live in close proximity to a telephone company end office, and even then access is not economical. This project overlays existing telecommunications infrastructure with WiMax wireless access. Offering broadband equivalent to or better than that available in more urban areas at speeds over 3Mbps. In addition to providing broadband capabilities to homes & industry this project will provide heavily subsidized access to community anchors such as hospitals, schools, government agencies & emergency responders.

Project Title: Rural Texas Panhandle Mid-Plains
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Texas

Project Type: Last Mile

Funding Round: Winter 2010 Broadband Initiatives Program

Grant Request: \$1,388,000.00

Loan Request: \$1,421,000.00

Other Funding: \$182,000.00

Status: Application Received

Description: Mid-Plains propose to provide fiber to the home to customers located in six rural areas in the Texas Panhandle. This project will serve rural subscribers located in 227 square miles within the counties of Armstrong, Briscoe, Randall, and Swisher in the central Texas Panhandle area. Many of the premises in these areas are at such a distance from the central office that Internet access speeds (using copper plant) are limited to sub-broadband speeds and deemed unacceptable to our customer base. Fiber to the premise (FTTP) service offerings will give the highest speed capabilities for current and future applications, support telephone service, and allow an introduction of video offerings in the future. This project will extend full fiber capabilities to the most rural of establishments and give them the increased bandwidth comparable with any urban establishment.

Status: Application Received

Description: Consumer demand for bandwidth has far exceeded industry ability to provide it. Estimates land somewhere in the realm of 7000 per cent. Spectrum shortage and smart phones are stretching service providers to the limit. Providers have wanted to market content with their network to increase Average Revenue Per User (ARPU) but have traditionally seen unlocked phones with dual band capabilities as a threat to revenue. This project theme will contend that an industry education movement needs to be underway where the fiber, cable, copper, and wireless industries are persuaded that the adaptive DNS and multiple internet gateway routing of the "hot cloud" 3G-WiFi mesh block convergent networks, with its open competition model, for example, would not lower ARPUs in any of those industries, but actually increase them because of the adaptive and carrier agnostic properties.

Project Title: ADVANCE Virginia
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Kentucky, Virginia

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$14,158,344.00
Loan Request: \$6,067,863.00
Other Funding: \$0.00
Status: Application Received

Description: The ADVANCE Project will provide ultra-high speed fiber-optic broadband to one of the poorest and undereducated regions of the nation with an experienced team that has worked together in this field successfully for nearly 10 years, including four RUS Community Connect grants. Our PFSA is underserved, contains one persistent poverty county, and is located in the Appalachians of Southwest Virginia. The project will pass 25,241 premises. It places emphasis on partnering with three funded Middle Mile projects, and has synergistic operations planned with two other Last Mile applications. This will create a Digital Nexus of connectivity that will break the cycle of persistent poverty. It will bring global connectivity that is needed to support life-long education of the labor force, and drive economic development with techniques that have only become possible in the Digital Age.

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Virginia

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$10,474,311.00
Loan Request: \$4,488,991.00
Other Funding: \$178,500.00
Status: Application Received

Description: The project involves using fiber to connect Nelson County, Wintergreen, and Scottsville, police and 1st responders to Nelson County's "middle mile" project (Round 1 EasyGrants ID 891). This is accomplished by connecting 3 separate fiber lines to Nelson County's "middle mile". One line would run from Wintergreen's 1st responders & 911 facilities to Nelson County's "middle mile" at the intersection of River Rd. & Adial Rd. (Routes 6 & 634 west). The 2nd would run from Scottsville's Police Dept. & 1st responders to Nelson County's "middle mile" at the intersection of River Road & Old Roberts Mtn. Rd. (US Routes 6 & 634 east). The 3rd would run from Brownings Cove to Lovingston. The synergy created by building on the earlier project will have a multiplier effect on the value of both by providing high speed access to anyone along any of the routes, including the Round 1 "middle mile".

Other Funding: \$0.00

Status: Application Received

Description: The TRANSFORM Project will provide ultra-high speed broadband to one of the poorest and undereducated regions of the nation with an experienced team that has worked together in this field successfully for nearly 10 years. Our PFSA is both unserved and underserved, contains two persistent poverty counties, and is located in the Appalachians of Northeast Tennessee. The project will pass 10,920 premises. It places emphasis on partnering with three funded Middle Mile projects, and has synergistic operations planned with two other Last Mile applications. These partnerships will create a Digital Nexus of connectivity that will break the cycle of persistent poverty. This project will do this by bringing global connectivity that is needed to support life-long education of the labor force, and driving economic development with techniques that have only become possible in the Digital Age.

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Kentucky, Maryland, Ohio, Pennsylvania, Virginia, West Virginia

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$9,832,956.00
Loan Request: \$0.00
Other Funding: \$3,454,823.00
Status: Application Received

Description: Our project, "Rural Mobile Broadband Initiative - The Virginias" will provide cost effective high-speed mobile broadband to various rural and low-income areas of the existing NTELOS PCS wireless network, where without an ARRA award it had not been economically feasible to launch our highly successful EVDO Rev. A service. This project is shovel ready in that all the sites identified to be upgraded are currently providing voice service. The upgrade to high-speed mobile broadband, as detailed in this application, will significantly minimize any environmental impact, by utilizing existing towers rather than building new ones. Since 2007, NTELOS has successfully upgraded 1065 of its existing cell sites to EVDO Rev. A service. The project described in this application is simply the expansion of the same plan, for which the senior management team has a demonstrated track record of success.

Status: Application Received
Description: Our project, "Rural Mobile Broadband Initiative" Maryland will provide cost effective high-speed mobile broadband to various rural and low-income areas of the existing NTELOS PCS wireless network, where without an ARRA award it had not been economically feasible to launch our highly successful EVDO Rev. A service. This project is shovel ready in that all the sites identified to be upgraded are currently providing voice service. The upgrade to high-speed mobile broadband, as detailed in this application, will significantly minimize any environmental impact, by utilizing existing towers rather than building new ones. Since 2007, NTELOS has successfully upgraded 1065 of its existing cell sites to EVDO Rev. A service. The project described in this application is simply the expansion of the same plan, for which the senior management team has a demonstrated track record of success.

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$23,455,439.00
Loan Request: \$1,234,497.00
Other Funding: \$0.00
Status: Application Received
Description: The Colville Confederated Tribes proposes a 275 mile open access last mile fiber optic network to connect the 2100 square mile community's households, businesses and critical community facilities to broadband. The Tribe applied for BTOP Public Computer Center and Sustainable Broadband Adoption grants. Funding for 275 miles of fiber will enable 15 public computer centers to bring digital literacy, and job training, and business training programs to the tribal communities. It will support sustainable broadband strategies to help the community leverage broadband access, with the assistance of a 100 youth Technology Corps to help with teaching and cultural preservation efforts. This project is an open access project that will promote competition among retail providers, lower high capital costs of backbone facilities and spur entry of new entrepreneurs into the network services market.

Description: Building on the experience EcliptixNet gained in deploying its current, RUS-funded broadband infrastructure, EcliptixNet is proposing to introduce technologically advanced and affordable broadband services at much greater speed capacities to over 90% of the rural premises across the counties of Ferry, Stevens, and Spokane, WA. This community-oriented project will establish high speed broadband services through fixed and mobile, indoor/outdoor, wireless connections to over 27,300 households, 3,600 businesses, and 300 Critical Community Institutions. From the deployment of this extensive network, EcliptixNet will establish a means of economic stability and secure a path for economic, physical and educational growth for each community. The success of this broadband project will provide a digital interstate for community development and economic growth throughout the proposed service area.

Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Washington

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,712,000.00
Loan Request: \$904,000.00
Other Funding: \$0.00
Status: Application Received

Description: Hood Canal Communications is proposing to expand broadband service throughout rural Mason County, Washington. This proposal includes parts of the Squaxin Indian Reservation, the area surrounding Pioneer School, and several other developments. Mason County was built around the timber industry, and has been hit hard by the recent economic downturn. Because 80% of the County residents live in rural areas, unavailability of broadband is still a major obstacle. This proposal would expand Hood Canal Communications' Hybrid Fiber Coax (HFC) network to bring much needed broadband service to 737 households and businesses and several critical community facilities.

Proposed Project Area: Washington

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,620,444.00
Loan Request: \$1,873,482.00
Other Funding: \$0.00
Status: Application Received
Description: Mason County PUD No. 3 is applying for Broadband Stimulus funding to provide necessary broadband services to the Harstine Island Community, which is under served, unserved, and economically distressed. The island is approximately ten miles long and three miles wide, is located at the southern end of Puget Sound, 50 miles away from the nearest non-rural area. It is accessible by bridge from Highway 3 that links Shelton to Bremerton. The grant will provide funding to construct a fiber to the home network using Active Ethernet technology along with wireless broadband in the last mile. The network will be open access and provide the residents with choices on services and providers. This proposed project will allow over 1500 businesses and residents in this distressed community access to critical community facilities for public safety, on-line education, and critical government facilities.

Grant Request: \$24,963,089.00
Loan Request: \$0.00
Other Funding: \$8,321,030.00
Status: Application Received

Description: With RUS funding, CCPUD would extend its FTTX infrastructure to serve the remaining 6,811 rural premises that are still without access to broadband. Currently this standards-based Passive Optical Network (PON) provides broadband access to over 30,000 premises in Chelan County. Local retail service providers use the infrastructure built by the CCPUD to provide high-speed Internet, television and telephone services to nearly 10,000 customers, including residences, businesses and critical community facilities. By extending the network, remaining rural customers would be able to acquire the services they desire from private sector providers. The communities near Blewett Pass, Cashmere, Leavenworth, Entiat, Malaga, Lake Wenatchee and Chelan are targeted under the ARRA RUS Act.

Status: Application Received
Description: This network will build a 109 mile fiber-to-the-home infrastructure to serve 1538 residential, 30 business passings and two Critical Community Facilities (CCF) in the Town of Troy Wisconsin. The capital requirement for this project is \$9,189,254 (\$9,067,898 in BIP funds) . This network will provide voice, video and internet service to unserved and underserved residences in the territory. Currently the Town of Troy is surrounded by service providers who have been unwilling or unable to extend their services into the Town. The Town of Troy has made attempts to bring service providers to the area for over two years and they have participated in preparing this application to bring the services that allow their residents to have better access to health, education, government and to allow telework applications (40% of residents surveyed stated they worked from home at least one day a week).

Grant Request: \$9,728,868.00
Loan Request: \$3,242,958.00
Other Funding: \$0.00
Status: Application Received

Description: The Netwurx NRBI (Netwurx Rural Broadband Initiative) will install WiMax compatible locations throughout South Central Wisconsin servicing rural areas between Milwaukee and Madison, which we have done for over 13 years. Netwurx began providing high speed wireless internet 7 years ago, concentrating on unserved and underserved areas. Our present towers will be upgraded to new technology and fiber will be added to deliver speeds of up to 1Gbit/sec to some locations and 10Mbit/sec to general customers. We will build a significant number of new locations covering 100% of our PFSA. Netwurx will continue to offer free access to all Emergency services like police and fire within our PFSA. Netwurx also offers free service to government institutions like cities, towns, schools and libraries within its territory in exchange for mounting rights on facilities.

Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$5,239,168.00
Loan Request: \$0.00
Other Funding: \$2,303,357.00
Status: Application Received
Description: The design included in this grant application extends an existing municipal Fiber-to-the-Premise (FTTP) network operated by City of Reedsburg acting through Reedsburg Utility Commission, to the surrounding rural area to provide affordable advanced broadband service to residents and businesses that are currently confined to traditional dial-up, unreliable wireless, and costly satellite services. This rural area of southwestern portion of Wisconsin has been well documented as being deficient in broadband services due to the hilly terrain and numerous valleys which severely limits wireless and satellite service coverage.

Project Title: UTELCO, LLC: Broadband project to serve rural unserved establishments
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Wisconsin

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$2,823,526.00
Loan Request: \$0.00
Other Funding: \$941,176.00
Status: Application Received
Description: UTELCO, LLC, a subsidiary of TDS Telecom, proposes a project to bring high-speed DSL broadband service to unserved establishments within its rural service territory, which is comparable to the DSL service provided in its more populated areas. The network is also engineered so that it can be easily upgraded at a reasonable cost to meet future needs.

Project Title: Rural Wyoming Broadband from Union Wireless
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Wyoming

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$20,415,634.00
Loan Request: \$0.00
Other Funding: \$13,610,424.00
Status: Application Received

Description: The Wyoming Broadband Project will expand the footprint of the Union Wireless network to cover areas of Wyoming that are currently unserved and underserved with high speed wireless data services. This network, when funded, will utilize the latest in 3G technology. We will expand on our current wireless network, adding locations to expand coverage and deploying the next generation in high speed wireless complimenting our extensive wireless coverage. This project will address the needs of the citizens of Wyoming by providing advanced high speed service to currently unavailable in the rural areas to Residents, Businesses, Educational Institutions, Health Care, State Transportation, Public Safety Officials and Native Americans in these critical uncovered service areas. As a Wyoming company with a heritage of connecting our residents, we are uniquely positioned to make this happen.

Project Title: VIKING's East of Billings Fiber Future
Program: Broadband Initiatives Program (BIP)
Proposed Project Area: Montana

Project Type: Last Mile
Funding Round: Winter 2010 Broadband Initiatives Program
Grant Request: \$4,375,000.00
Loan Request: \$0.00
Other Funding: \$293,854.00
Status: Application Received

Description: VIKING Broadband is poised to roll out fiber to customers in the rural area east of Billings, MT in East Billings, Shepherd, Huntley, Worden, Ballantine and Pompeys Pillar. The proposed funded service area is a growing UNSERVED area surrounding these six communities. The communities of Huntley, Worden and Ballantine are excluded from the proposed funded service area because they are already SERVED with broadband by VIKING and the local telephone cooperative. VIKING, a cable operator with a foundation of services including video, data and voice, is proposing to extend its network over fiber outward into the growing area surrounding these communities. The PFSA represents a unique opportunity where many ingredients come together for a project shovel ready and in the spirit of the ARRA, bringing broadband to unserved customers, stimulating the economy, and building sustainable infrastructure.
