For Immediate Release
February 2, 2010

The National Energy Technology Laboratory (NETL) has selected Jacquelyn Bean as an economist. Previously, she worked as an energy consultant at Navigant Consulting in Burlington, Mass.

Bean grew up in Florida and earned a bachelor of arts degree in economics-accounting, finance, and government from Claremont McKenna College in Claremont, Calif. She lives in Pittsburgh, Pa.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
