For Immediate Release
June 22, 2009

The National Energy Technology Laboratory (NETL) has selected Justin Cole Glier as a project manager within the Carbon Sequestration Division. Previously, he worked as a hydraulic fracturing engineer and carbon dioxide fluid specialist with the oil and gas consulting firm, Schlumberger, Ltd.

Glier grew up in Cincinnati, OH and earned his master's degree in mining and geological engineering from the University of Arizona. He lives in Morgantown, WV.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
