For Immediate Release
August 17, 2009

The National Energy Technology Laboratory (NETL) has selected Summer M. Lee as an Energy Project Specialist in the Building and Efficiency Technologies Division. She will work on Technology Validation and Market Introduction (TVMI) projects, including Builders Challenge, Building Energy Codes, EnergySmart Hospitals, EnergySmart Schools, and ENERGY STAR®. Previously, she worked on redevelopment projects in New York City as an urban planner/project manager for Philip Habib & Associates.

Lee grew up in Williamsburg, Va. and earned a bachelor's degree in urban & environmental planning from the University of Virginia in Charlottesville. She continued her studies at Columbia University in New York City and earned a master's degree in urban planning. She has recently moved to Pittsburgh, Pa. and is living in Shadyside.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
