the BUSINESS SITUATION

THE indicators thus far available for the month of January present a very mixed picture, which makes it difficult to come to any firm conclusions about the precise course of current business activity. On the one hand, personal income and payrolls in January both registered unusually large increases over December. The demand for labor continued strong, to judge from the large advance in payroll employment and the continued low rate of unemployment in the opening month of the new year. January also witnessed at least a temporary resumption of the advance in industrial prices, which had been unchanged the month before.

On the other hand, industrial production in January decreased as motor vehicle and steel producers reduced output sharply, and production in non-durable goods industries declined slightly.

The January results followed a substantial fourth quarter increase in GNP that was perhaps most noteworthy for its composition. According to revised figures, total output in the fourth quarter rose \$14 billion to a seasonally adjusted annual rate of \$759 billion—about the same increase as shown in the preliminary estimate. However, there were downward revisions in net exports, Federal nondefense purchases, and, to a lesser degree, consumption expenditures; these revisions were offset by an upward change in the estimate of inventory accumulation. It appears that close to half of last quarter's production increase went into inventories and that final sales rose only half as much in the third quarter.

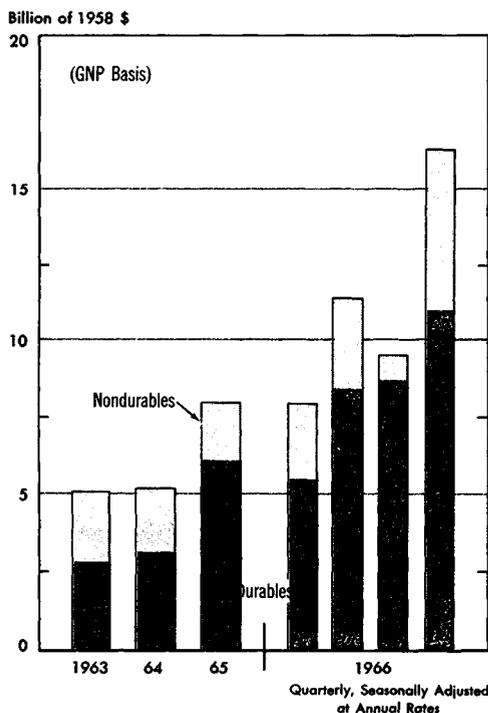

December. Transfer payments rose about \$0.8 billion, but personal contributions for social insurance (an item that is subtracted from the sum of the other components of personal income) rose somewhat more than this as a result of the increase in social security taxes that became effective on January 1.

Employment up, unemployment steady

Nonfarm payroll employment, seasonally adjusted, rose by 280,000 persons in January, the fourth month in a row of substantial gain. All major industries except contract construction reported a step-up in employment during the first month of the new year, with the most sizable advances in retail trade, services, and government. The rise in retail trade was unusually large and may have reflected the fact that retailers cut their employment less than usual after Christmas because of continued difficulties in filling job openings. Manufacturing employment rose by 35,000, with most of the increase at plants producing durable goods. The only significant reduction occurred in the transportation equipment group, the result of a greater-than-seasonal cutback in auto production schedules.

The January rate of unemployment—as determined by a newly enlarged household sample and a modified system for classifying those employed, unemployed, and not in the labor force—was unchanged from the December rate of 3.7 percent. On balance, the overall rate of unemployment has changed little during the past year. In January, the rate for adult men, 2.2 percent, was moderately below the year-earlier figure,

Unfilled orders continued to rise but at slower pace in 4th quarter of 1966 . . .

as new orders for machinery and defense equipment declined

Quarterly Totals, Seasonally Adjusted

while the rate for adult women was up from January 1966. The unemployment rate for teenagers (redefined to exclude those under 16 years of age) dropped to 11 percent in January, as compared with the fourth quarter 1966 average of 12.1 percent and the January 1966 mark of 13 percent.

Heavy Accumulation of Inventories

Businessmen accumulated a substantial volume of inventories in 1966, particularly in the final quarter of the year. Although the fourth quarter increase in stocks was due partly to the rising volume of production of defense products and machinery and equipment, it probably reflected some involuntary accumulation as well. With inventories high in relation to output, businessmen are doubtless taking steps to pare their stocks; this process, coupled with the prospects of a more moderate rise in defense and capital goods output, should dampen the rise in overall production this year.

At a seasonally adjusted annual rate of \$17½ billion, nonfarm inventory investment in the fourth quarter was \$7 billion above the third quarter rate. In constant dollars, the fourth quarter accumulation was as large as it was in the final quarter of 1950, when businessmen built up their stocks in a speculative buying wave after the outbreak of the Korean war. Some two-thirds of the fourth quarter 1966 accumulation was accounted for by firms in durable goods manufacturing and trade, but the change in accumulation from the third quarter was attributable even more to nondurables than to durables. Inventory accumulation in constant dollars is illustrated in chart 1.

Durable goods

All of the rise in inventory investment in durable goods from the third to the fourth quarter occurred in trade, both wholesale and retail. The accumulation of durable trade stocks in the third quarter had been quite low, mainly because of a reduction of automobile inventories held by retail dealers. However, auto stocks rose again in the fourth quarter as retail sales of cars

slackened. In addition, there was a buildup of distributors' stocks of electrical appliances in the final quarter of the year as retail sales weakened.

Although inventory investment in durable goods manufacturing was high in the fourth quarter, in magnitude it was little different from the previous quarter. The increase in work-in-process inventories of durable goods manufacturers was about the same as the high third quarter rate. There was a noticeable decrease in accumulation of stocks of materials and supplies and a modest increase in accumulation of finished goods, notably by producers of building materials and consumer appliances, demand for which has been flagging. Investment in stocks of both materials and finished goods had risen substantially in the third quarter.

Nondurable goods

Increases in inventory accumulation from the third to the fourth quarter were widespread in nondurable goods. Some rise was not unexpected since accumulation in the third quarter was quite low; the \$1 billion rate in the summer quarter compares with an average \$2 billion rise in 1965 and a \$3 billion annual rate of increase in the first half of 1966. Still, it is fairly likely that a portion of the third to fourth quarter advance was involuntary. Retail sales of nondurable goods declined from November to December and rose only slightly from the third to the fourth quarter as a whole. The rise in stocks held by retail apparel and general merchandise stores accelerated noticeably in the fourth quarter and at wholesale there was a large increase in inventory accumulation by dry goods and apparel wholesalers. In manufacturing, the rise in accumulation over the third quarter was pronounced for finished goods in a broad range of industries.

Durable Goods Orders

The pattern of order placements for durable goods since last summer suggests a much more modest growth in durable goods output and sales in the first half of this year than occurred in

1966. Seasonally adjusted new orders for durable goods—which had increased sharply in 1965 and early 1966—increased only slightly in the spring and summer months and declined moderately in the final quarter of the year. Aggregate bookings in the October–December period were 2 percent below the average of the first three quarters and were the lowest for any quarter of 1966. As chart 2 shows, the drop in order placements resulted mainly from a cutback in defense ordering and a reduction in new orders for capital equipment.

Despite the reduction in the flow of new orders in the fourth quarter of 1966, new bookings outpaced shipments, and order backlogs continued to rise, though at a greatly reduced rate. Backlogs were about unchanged after October and for the entire fourth quarter rose \$700 million, far less than the quarterly average of \$4.1 billion in the preceding three quarters. At the end of December, seasonally adjusted backlogs, at \$76.3 billion, were \$13.8 billion above their year-earlier level—the largest year-to-year increase by far during the 1961–66 expansion period and the highest unfilled order volume on record. Machinery and defense equipment accounted for more than three-fourths of the 1966 increase in backlogs.

Decline in machinery orders

The fourth quarter reduction in the flow of orders for machinery and equipment was the first quarterly decrease since mid-1964. Although seasonally adjusted December bookings held about even with November, they were 4 percent under October and brought the fourth quarter total nearly 5 percent below the third quarter peak. The reductions probably reflect the influence of several factors: the suspension of the investment tax credit last fall, the stringent credit situation in 1966—notably in the third quarter—the easing in profits after midyear, and the less rapid growth in total output after the first quarter.

Changes in new orders from the third to the fourth quarter were not uniform

among the various machinery and equipment industries. The largest decrease was from an abnormally high third quarter rate in shipbuilding and railroad equipment combined. Fairly large declines occurred in special industry machinery and engines and turbines, although in view of the very strong demand for generating equipment by electric utilities the drop in orders for engines and turbines may not be significant. Smaller decreases were evident for electric transmission equipment, service machinery, and metalworking equipment; for the last-named industry, it was the second successive quarterly decline and may reflect a reduced pace of machine tool purchases by the automobile industry. These cutbacks were offset in part by small increases for general industrial machinery and for construction and materials handling equipment and by a large rise in office and store equipment.

At the end of 1966, backlogs were at a peak for machinery and equipment as a whole and for most of the component industries. Although the ratio of backlogs to shipments was the highest since the first half of 1957, it is significant that the ratio failed to show a quarterly rise for the first time since the summer of 1964.

Money Market Developments

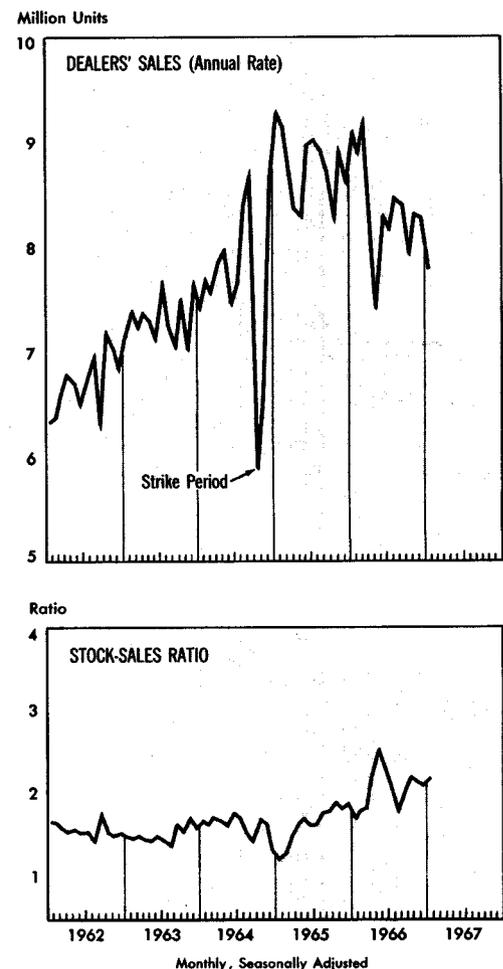

Since establishing record highs late last August and early September, interest rates and bond yields have declined over the fall and winter months. With a slackening in the rise in economic activity, demands for funds have moderated, and in recent months, an emphasis toward less restrictive monetary policy has emerged. These developments proceeded at an accelerated pace during January.

As chart 4 and table 1 show, the current decline in interest rates and bond yields has occurred in nearly all major sectors of the money and capital markets. However—and this is generally true of periods of rapidly chang-

ing credit conditions—the more pronounced trends were evident in short-term markets. From the end of December to the end of January, the yield on 3-month Treasury bills fell more than one-fourth of a percentage point while the Federal funds rate—the price banks pay for borrowing each other's excess reserves—fell more than 1¼ points. This decline in the price of Federal funds is significant not only because of the magnitude of the swing but also because this highly sensitive price of short-term funds is closely related to other money market rates. When banks are less pressed for loans and less concerned about reserve deficiencies, they supply the Federal funds market, and the price of these funds will generally drop faster and lower than other competitive rates.

CHART 3

New Domestically Produced Cars

U.S. Department of Commerce, Office of Business Economics

67-2-3

In this way, the Federal funds market quickly reflects shifts in liquidity pressures and anticipates subsequent short-run developments in other parts of the short-term rate structure.

In other money market developments, the rate on prime 4- to 6-month commercial paper declined one-half of a point. Until mid-January, this rate had been particularly unresponsive to easing credit conditions. Furthermore, on January 26, the Chase Manhattan Bank surprised the financial community by lowering the prime rate—the price it charges its most credit worthy customers—from 6 to 5½ percent. This reduction, while for the present followed only halfway by most banks, was the first positive move toward lower

“user charges” for the great majority of borrowers.

It is also important to note that the reduction in interest rates and bond yields has extended beyond the United States. Toward the end of January, bank rates were lowered by the Bank of England from 7 to 6½ percent, by Sweden's Riksbank from 6 to 5½ percent, and by the German Bundesbank from 5 to 4½ percent. The easing of rates in Western Europe is encouraging from the standpoint of monetary policy. Insofar as international short-term rates move together and relative rate differentials are maintained, the monetary authorities can pursue an easier credit policy and lower interest rates with less fear of stimulating an exodus of short-term capital—a development that would aggravate the balance of payments deficit.

last year, the 5½ percent ceiling payable for CD's made them a relatively unattractive outlet for short-term funds, and the volume of these deposits at large commercial banks declined more than \$2½ billion. However, as interest rates turned lower in January, CD's became more attractive to corporate money managers, and the volume of deposits at large commercial banks increased about \$2 billion. Toward the end of January, the rate differential seemed to be closing as the yield on CD's in the secondary market fell and as rates offered for CD funds began to decline. Thus, it is unlikely that the exceptionally rapid expansion in certificates of deposits will be maintained in the months ahead.

It should be noted that part of the shift by corporations to time deposits was accompanied by a reduction in the demand deposit component of the money supply. Since reserve requirements against time deposits are substantially lower than those against demand deposits, this shift has the effect of supporting an enlarged volume of bank credit.

Credit stringency eases

During January, the Federal Reserve authorities moved more decisively in the direction of loosening the strings of tight monetary policy. With increased Federal Reserve purchases of Government securities and a decline in currency in circulation, seasonally adjusted total reserves—the base for credit expansion—increased \$330 million. Moreover, member bank borrowings declined \$168 million during the month and, at \$389 million, were at their lowest level since January of 1965. Free reserves, the difference between excess reserves and member bank borrowings and a widely watched indicator of monetary policy, turned nearly positive as they rose to their highest level since December of 1965.

With less Federal Reserve restraint and lower interest rates, deposits flowed into the banking system. Time and savings deposits at all commercial banks rose \$2.3 billion (seasonally adjusted) in January and posted their largest monthly gain ever. In large part, this flow of time deposits reflected a dramatic turnabout in commercial bank issuance of large certificates of deposit. Since the end of December, banks have received CD money at a faster rate than they had lost it in the preceding 4 months. From September through the end of

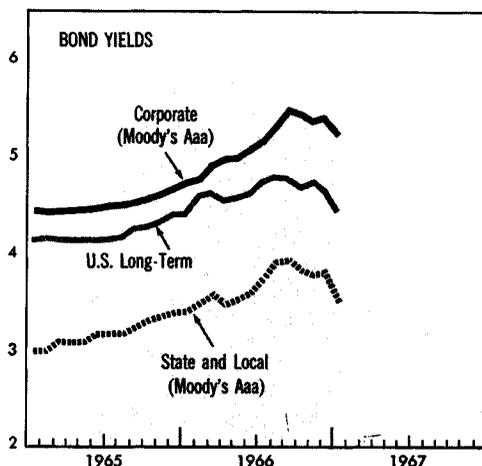

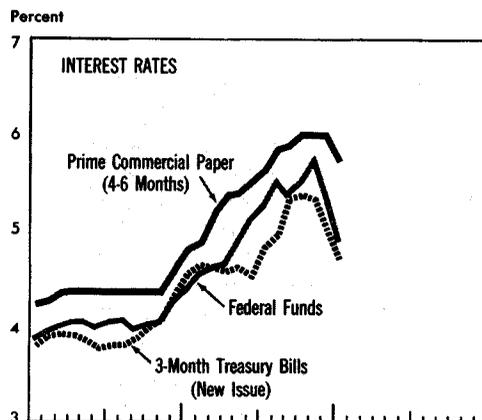

Bank credit expands

In January, commercial bank credit registered a very sharp expansion of \$3.8 billion. This was considerably higher than the \$3 billion increase in January 1966 and in fact was the largest monthly gain in seasonally adjusted bank credit since June 1958. With business loans up substantially, total loans accounted for \$3.1 billion of the advance in bank credit. After remain-

Interest Rates and Bond Yields

With easier credit conditions, financing costs have declined

ing virtually unchanged during the last 4 months of 1966, the volume of business loans at large commercial banks (seasonally adjusted) rose \$1½ billion—a \$¼ billion larger increase than occurred in the year-earlier period. Although this development resulted in part from the Federal Reserve's termination of its policy of restraining business loan expansion, it also reflects less stringency in commercial bank liquidity positions.

Investments at all commercial banks also rose in January as banks increased their holdings of "other securities"—mostly municipals—by \$1.2 billion. Some offset occurred, however, as purchases of Government securities dipped \$½ billion following the \$1.3 billion increase recorded in December.

Suspension of Tax Credit and Accelerated Depreciation: Estimated Impact on Investment

Businessmen expect to reduce 1967 expenditures on new plant and equipment by \$2.3 billion below what they otherwise would have been as a result of the temporary suspension of the investment tax credit and of certain accelerated depreciation allowances. In a special survey conducted in December by the Office of Business Economics and the Securities and Exchange Commission, businessmen also reported that they had cut back capital outlays in 1966 by \$325 million because of the legislation enacted last fall. This survey did not cover farmers, professionals, or real estate companies.

In evaluating the results obtained in this survey, the reader should note that many firms in December 1966 had not fully made their investment decisions for 1967. In any case, because such decisions are based on many complex considerations, it is always difficult to pinpoint the precise impact of any single factor, such as the recent suspensions. For this reason, the figures presented here on the impact of the suspensions should be considered an approximate indication of businessmen's

Mortgage markets a bit easier

In other developments, the general decline in financing costs placed the rates paid by savings and loan associations and mutual savings banks on a more competitive basis, and the flow of funds to these institutions has improved markedly. Based on recently available data, \$1¼ billion of new funds flowed into savings and loan associations in December. This was a record volume of new funds for the month of December and suggests some thawing in mortgage markets in the months ahead. Furthermore, the yield on new FHA mortgages declined to 6.62 percent in January, down from 6.77 percent in December and a peak of 6.81 percent in November.

evaluations rather than a precise measure of their influence.

The new law, which was part of Government policy aimed at dampening capital expenditures, suspended these incentives to investment for the period October 10, 1966, to January 1, 1968. The legislation lowered outlays in the fourth quarter of 1966 and was one of the factors in the downward revision of anticipated expenditures for that period, which was reported in the December SURVEY. The regular survey of annual plant and equipment expenditures is now being conducted, and actual 1966 outlays as well as anticipated 1967 programs will be available in the next issue.

The importance of the investment tax credit and depreciation allowances in investment decisions varies considerably from company to company. Many firms appear to give them no weight; for others, their influence on cash flow or on the expected rate of return are important considerations. On balance, one out of eight companies surveyed in December reported that they had altered their investment pro-

grams as a result of the suspensions. There was a wide dispersion in this ratio among the major industry divisions. In public utilities, communications, and mining, 1 out of 14 companies indicated that they would reduce their capital spending in response to the loss of the investment tax credit. Also below average were commercial firms, where the proportion was 1 in 11. Relatively larger proportions of manufacturing and transportation firms were adversely affected: one out of seven and one out of four, respectively.

A few companies reported that they had speeded up their purchases of, or orders for, capital goods in anticipation of the enactment of the new legislation. As a result, their outlays in 1966 and their expected outlays for 1967 were reportedly higher than the amounts they otherwise would have spent or planned to spend. However, the amounts involved were quite small.

The legislation, of course, had a basically adverse effect on new orders for capital goods in 1966, and this will be felt more strongly in 1967. Data on the legislation's effect on new orders were not collected. Census figures indicate that new orders for machinery and equipment declined in the fourth quarter of 1966 after an extended rise (chart 2).

Impact by industry

For both 1966 and 1967, the largest expected reductions in capital outlays attributable to the suspensions were

Table 2.—Suspension of Tax Credit and Accelerated Depreciation: Estimated Impact on Investment

reported by manufacturers and by firms engaged in trade, services, and construction. The cutback in 1966 for business as a whole amounted to \$325 million, or one-half of 1 percent of the \$60.6 billion spent last year for new plant and equipment. Of this amount, \$225 million was accounted for by commercial firms. Most of the remaining \$100 million was in manufacturing.

For 1967, manufacturing and commercial firms each account for about \$925 million of the anticipated reduction in outlays attributable to the suspensions. The railroads and other transportation companies reported a \$375 million reduction. For both

groups, the reductions were about 7 percent of their 1966 capital spending rates. Airline, public utility, communications, and mining companies indicated only nominal effects from the suspensions.

A further analysis of the returns suggests that the large differences among industrial groups are in part a reflection of the size distribution of firms within industries. The sharpest adverse impact of the suspensions was reported by firms with assets of less than \$5 million. In the manufacturing and commercial groups, these small companies account for the bulk of the reported reductions in capital programs.

tobacco, clothing, and housing—generally considered essential items of living. The right side of the chart shows that food and tobacco accounted for one-fourth of all consumer expenditures in 1966. The various expenditure groups associated with the home—housing, furniture and equipment, and household operation services—absorbed more than one-fourth of all consumer expenditures in 1966. Transportation, including autos and gasoline, as well as purchased transportation, took about one-eighth of the consumer dollar last year.

Postwar shifts

In the postwar years prior to 1965, the allocation among durables, nondurables, and services showed marked variations. For example, in current dollars spending for nondurable goods increased more than 60 percent from 1953 to 1965, but this advance was considerably less than the rise of nearly 90 percent in total consumer expenditures. As a result, the nondurable goods portion of the total decreased from 51 to 44 percent over these 12 years.

From 1953 to 1961, the relative decline in nondurables was offset by an increase in the percentage spent for services, while the durable goods ratio fluctuated between 13 and 16 percent of the total. From 1961 to 1965, however, durable goods absorbed an increasing part of aggregate expenditures, while the proportion going for services tended to stabilize at just over 40 percent.

After allowance for price changes, purchases of the three major categories show the same general pattern as the current dollar expenditure over the postwar period, but the pre-1961 trends shown by the physical volume data are not so sharp.

The decline in nondurable goods outlays relative to the total has been concentrated in food and clothing. Expenditures for these two groups comprised 37½ percent of the total in 1953 and only 31 percent in 1966. Except for the period 1955-58, when it showed little change, the proportion of the expenditure dollar spent on food has declined each year since 1953.

Distribution of Personal Consumption Expenditures

Last year, personal income totaled a record \$580½ billion. Of this amount, one-eighth, or \$75 billion, went for personal tax payments, and nearly 5 percent, or \$27 billion, was channeled into personal saving (left side of chart 5). The remainder of the personal income dollar—about four-fifths—was spent for goods and services.¹

The 1966 distribution of personal consumption expenditures among the

three major categories changed only slightly from the 1965 proportions. About 44 cents of the expenditure dollar went for purchases of nondurable goods; another 41 cents was spent for services of all types, and the remaining 15 cents went for durable goods. The breakdown based on constant (1958) dollar expenditures also changed little from 1965 to 1966, with 45 cents spent on nondurable goods, 38 cents on services, and 17 cents on durable goods.

Nearly 48 percent of the total amount spent by consumers last year went for the combined categories of food and

1. To obtain total personal outlays, it is necessary to add to purchases of goods and services, outlays for interest paid by consumers and personal transfer payments to foreigners, which together amounted to 2 percent of the 1966 personal income dollar.

¹ Based on current dollar expenditures.

On the other hand, the percentage spent for clothing decreased sharply through 1957, declined at a more gradual rate through 1963, and has moved erratically since then. In 1966, the ratio was about the same as in 1957. Outlays for nondurable goods other than food and clothing have fluctuated narrowly between 13 and 13½ percent of total expenditures for almost two decades.

From 1961 to 1965 the ratio of autos and parts to total expenditures rose steadily. At 6½ percent in 1965, it was the same as in 1955, the previous boom year in auto sales. With the slowing down in auto sales in 1966, the ratio dropped somewhat. Since 1961, the percentage spent for furniture and

equipment has increased each year, while other durable goods have accounted for a fairly constant part of total expenditures.

The ratio of expenditures for housing and household operation services to total spending showed a strong upward trend during the postwar years prior to 1961. Since then, the physical volume ratio has shown no further change, while that based on current dollar expenditures is now the lowest in 6 years. In contrast, the sharp increases in prices of medical services and of personal business services—legal fees, life insurance, and so forth—have resulted in a larger share of the consumer expenditure dollar being taken by these categories during the 1960's.

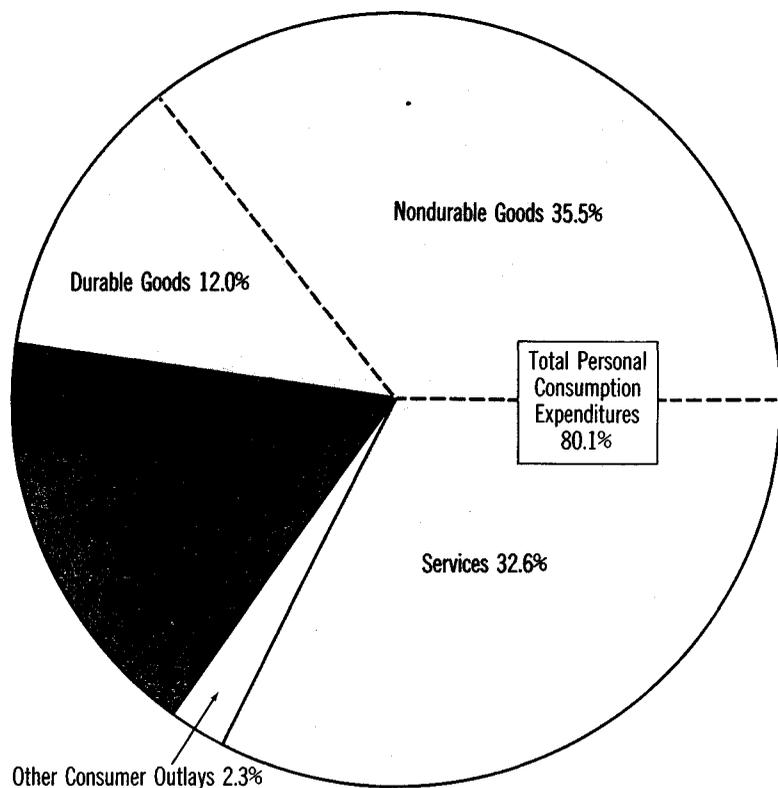

Here again, the physical volume of these services relative to the total has shown little change over the period.

Not all groups shared in the relative rise in spending for services prior to 1961. The amount spent for personal services—such as dry cleaning, laundry, and barber and beauty shop services—increased in line with aggregate expenditures from 1953 to 1961. The percentage going for transportation decreased, as the decline in the amount spent for purchased local transportation more than offset the rise in expenditures associated with the automobile. Since 1961, outlays for transportation and personal services have not increased as fast as total expenditures.

CHART 5

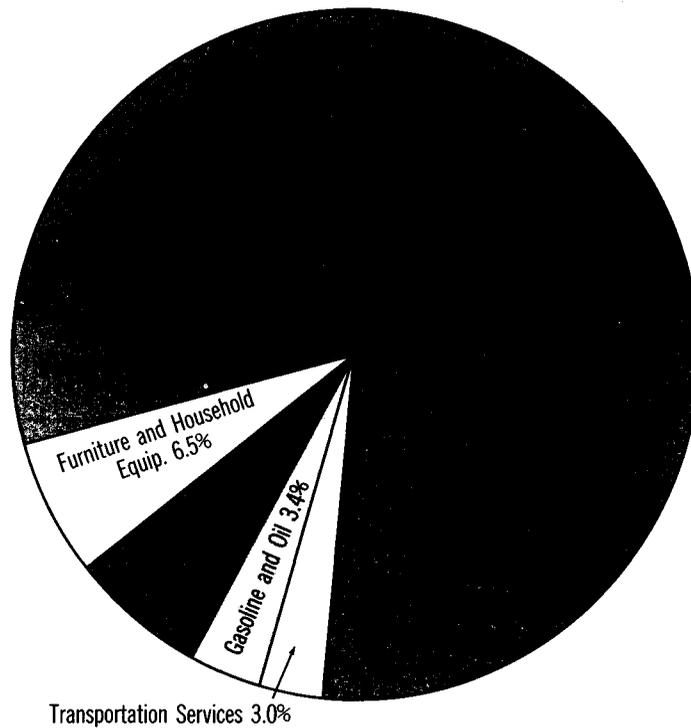

The Personal Income and Consumer Expenditure Dollar in 1966

Distribution of the Personal Income Dollar

Total personal income in 1966 - \$580 billion

Distribution of Personal Consumption Expenditures

Total consumption expenditures in 1966 - \$465 billion

Federal Programs in Fiscal Year 1968

A MORE moderate rate of expansion in defense spending, major increases in social security benefits, and proposals to increase personal and corporate taxes highlight the fiscal 1968 budget submitted to Congress in January. For the first time, the President's budget message emphasized the national income accounts (NIA) budget in dealing with overall fiscal policy.

The fiscal program spelled out in the budget and in the *Economic Report of the President* is mildly stimulative for calendar 1967 as a whole. Expansionary influences in the first half of the year are expected to lessen in the second half. This is in line with the administration's expectations that private demand will not be particularly buoyant in the first half, primarily because of a lower rate of inventory investment, but will show more strength in the second half, mainly as a result of a turnaround in residential construction.

The budget estimates assume that GNP in calendar 1967 will total \$787 billion, an increase of 6½ percent, as compared with last year's 8½ percent advance. Real growth, based on GNP in constant prices, is expected to increase 4 percent. Personal income is estimated at \$624 billion, \$44 billion more than in 1966. Corporate profits before taxes are projected to rise about \$1 billion, from \$82 billion to \$83 billion.

Smaller deficits in fiscal 1968

Each of the Federal budgets—NIA, cash, and administrative—remain in deficit in fiscal 1968, but smaller deficits than in fiscal year 1967 have been projected for all three.

Although the size of the deficit is quite different in the three budgets, the reduction in the deficit is about the same on all three bases. The NIA deficit is estimated to fall \$1¼ billion to a \$2 billion level; the cash deficit, to decline nearly \$2 billion to \$4¼ billion, and the administrative deficit, to drop \$1½ billion to \$8 billion (table 1).

Federal receipts, reflecting the proposed tax increases as well as continued expansion in economic activity, are expected to increase under all three budget concepts. NIA budget receipts

are projected to rise by \$17¼ billion; cash receipts from the public, by \$13½ billion; and administrative budget revenues, by \$10 billion.

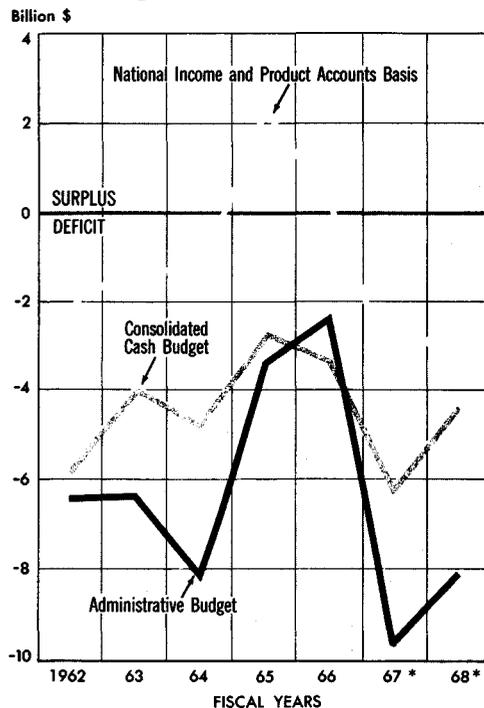

The advance in administrative budget receipts lags behind the increase in both cash and NIA revenues because the administrative budget excludes trust fund receipts, which are rising rapidly. Revenues increase more rapidly in the NIA budget than in the cash budget primarily because the acceleration of corporate payments under the Revenue Acts of 1964 and 1966 was virtually completed in fiscal 1967. The cash budget reflects the acceleration in 1967 and its absence in 1968.

Expenditures advance in all three budgets. NIA budget expenditures increase \$15½ billion; cash payments, \$11½ billion; and administrative budget outlays, \$8¼ billion. The cash and administrative budget expenditures increase less rapidly than NIA outlays, principally because expenditures in those budgets are reduced by sales of financial assets, which have no effect on NIA outlays. Cash budget payments advance faster than administrative budget expenditures, largely because of higher trust fund outlays.

NIA budget pattern

In the first half of this calendar year, the budget is expected to be stimulative as Federal expenditures are projected to rise more than receipts. As a result, the NIA deficit is expected to be substantially greater than that recorded in July–December 1966, although only moderately larger than the fourth quarter rate.

Federal Fiscal Position on Three Accounting Bases*

*Estimates from "The Budget of the United States for the Fiscal Year Ending June 30, 1968."

Purchases of goods and services, especially for national defense, are projected to continue their strong advance. Transfer payments, paced by medicare outlays, will also contribute to rising expenditures. Partially offsetting these increases will be the sharp reductions in Federal highway grants slated for early 1967.

On the receipts side, the advance in personal tax payments will slow down markedly this spring, because final settlements on personal tax liabilities for 1966 are expected to be relatively modest. The system of graduated withholding instituted last May narrowed the gap between tax liabilities and tax payments by over \$1 billion. Other sources of Federal revenues, such as social insurance contributions and corporate tax accruals, are projected to show strong gains, primarily as a result of increased social security and corporate tax rates.

The deficit is projected to decline in the second half of this year. Although a large rise is expected in social security

benefits in the second half of this year, the rate of increase in defense outlays is expected to slow down, and revenues are scheduled to be boosted. In particular, existing withholding tax rates are scheduled to be raised at midyear by the proposed 6 percent surcharge, and nonwithheld tax payments are expected to return to a more normal level. Also, a sizable postal rate increase is slated for July 1, 1967. On balance, these factors will reduce the second-half deficit below that of the first half.

The NIA budget receipts and expenditures by major component are shown in table 2 for the fiscal years 1966-68.

The Administrative, Cash, and NIA Budgets

Although there has been much more public discussion of the three different measures of the Federal budget this year, it may be useful to review the major differences.

Each of the three Federal budget measures emphasizes certain facets of Federal operations. The administrative budget, which covers receipts and expenditures of funds owned by the Federal government, is the oldest and most familiar of the three budgets. It still serves as the principal financial plan of the Government and as the basis of recommended legislation. However, it has some serious shortcomings as a tool for economic analysis, mainly because it excludes the large and growing activities of the trust funds, such as those for social security, highways, and unemployment. In fiscal 1968, these funds will collect over \$48 billion in receipts and spend \$44½ billion.

The consolidated cash budget is more useful from the standpoint of financial analysis in that it presents a more comprehensive picture of total receipts and expenditures of the Federal Government than the administrative budget. It is the most widely used measure of cash flows and borrowing requirements of the Federal Government. Developed in the late 1930's, this budget includes the receipts and expenditures of the trust funds; it excludes intragovernmental transactions—among them, the large Government interest payments to the trust funds—since they do

not represent cash flows to the public; and it adjusts administrative and trust expenditures from a checks-issued to a checks-paid basis.

The NIA budget is generally regarded as the best indicator of the fiscal impact of the Federal Government. For many years the annual *Economic Reports of the President* have used this measure in discussing fiscal policy, and since 1962, this measure has been incorporated in the Federal budget as well. As the table below indicates, it differs from the other two budgets in coverage, in timing, and in the handling of financial transactions. Table 3 presents a detailed reconciliation of the three budgets.

Summary of Major Differences Among the Three Budgets

	Administrative	Cash	NIA
Coverage			
Trust funds (except D.C.)	Excluded	Included	Included
District of Columbia	Excluded	Included	Excluded
FLB, FHLB	Excluded	Included	Excluded
Timing			
Receipts	Collections	Collections	Chiefly accrual ¹
Expenditures	Chiefly checks issued ²	Checks paid	Delivery (purchases) accrual (interest), checks issued (all other)
Financial transactions	Included	Included	Excluded

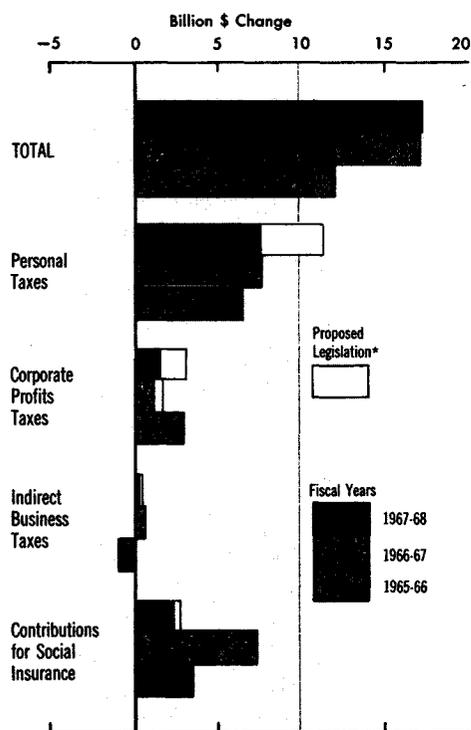

¹ Personal taxes are recorded when paid.
² Interest payments are recorded on accrual basis.

With respect to coverage, the NIA budget, like the cash budget, includes the income and outgo of trust funds. Unlike the cash budget, however, it excludes transactions of the District of Columbia (which is included with State and local governments in the national income accounts) and two Government-sponsored, but privately owned, enterprises, the Federal land banks (FLB), and the Federal home loan banks (FHLB), both of which are recorded in the private sector in the national accounts.

With respect to timing, the NIA budget synchronizes both receipts and expenditures with other related flows in the national income accounts. Most types of receipts, such as corporate,

CHART 7

Changes in Federal Government Receipts

*Change in tax receipts from proposed legislation.
 Note.—National income and product accounts basis.

excise, and social security taxes, are recorded on an accrual basis; withheld income taxes are counted at the time taxes are deducted from employees, paychecks; and final tax settlements are recorded when paid. On the expenditure side, purchases of goods and services are recorded to the extent possible at the time of delivery rather than of payment. Interest payments are recorded on an accrual basis, and transfers, grants-in-aid, and subsidies, on a checks-issued basis.

Financial transactions, such as lending, loan repayment, and sales of financial assets, are not included in the NIA budget since they neither add to nor subtract from income flows but represent merely an exchange of financial claims.

NIA budget advance rapid

As was mentioned earlier, both receipts and expenditures in the NIA budget increase more rapidly than in the cash budget in fiscal 1968. Largely because of the trust funds, the cash budget increases are well above those of the administrative budget.

The advances in NIA receipts and expenditures are each about \$4 billion larger than those in the cash budget for fiscal year 1968. With regard to receipts, this can be attributed mainly to corporate taxes. In the NIA budget, corporate tax accruals are expected to increase \$3 billion, whereas in the cash budget corporate tax collections (including taxes paid by Federal Reserve banks) are expected to decline \$¼ billion.

Prior to 1964, corporate tax payments usually lagged substantially behind the accrual of liabilities in any given fiscal year. The acceleration of these payments under the provisions of the Revenue Act of 1964 narrowed this gap. The Tax Adjustment Act of 1966 provided for a further speedup with the objective of placing collections on a nearly current basis by the end of 1967, rather than by 1971 as originally planned in the 1964 act.

Starting last July 1, many corporations were paying more than 100 percent of the current year liability. As a result of this transitional situation, total collections in fiscal 1967 are expected to exceed liabilities for that year by almost \$4 billion. Collections in fiscal 1968 will continue to exceed liabilities, but by a greatly reduced amount.

The larger increase in NIA expenditures than in cash payments reflects sharp declines in net expenditures by Federal home loan banks and Federal land banks and a drop in net lending. These decreases reduce cash expenditures but have no effect on NIA outlays. The lower figure for net lending is partially a reflection of the expectation of increased sales of participation certificates in fiscal 1968. Receipts from these sales are netted against expenditures in the cash budget. On balance, there are virtually no timing differences between cash and NIA expenditures in 1968, much the same as in the previous year. Although cash payments are expected to exceed deliveries of military hard goods by a small amount in 1968, this is expected to be offset by an excess of interest accruals over payments.

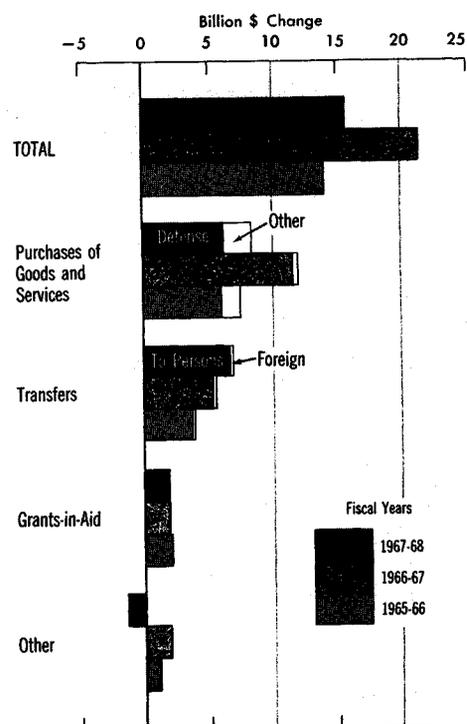

Fiscal 1968 NIA Receipts

Federal receipts in fiscal 1968 are estimated to exceed \$167 billion, an increase of \$17¼ billion over expected fiscal 1967 revenues. Over \$12 billion of this advance can be attributed to the growth of income, profits, and employment during the year. Another \$5 billion is the result of proposed legislation to boost personal tax payments and corporate tax liabilities and—to a much lesser extent—to institute or increase several user taxes or charges

and to lift the maximum earnings subject to the social security payroll tax. The net effect of recent legislation—the Excise Tax Act of 1965, Social Security Act of 1965, Tax Adjustment Act of 1966, and Investment Credit Suspension Act of 1966—is negligible on the fiscal 1967–68 increase in total NIA receipts, although social insurance contributions will be increased, and personal taxes and indirect business taxes reduced, by these statutes.

Personal tax and nontax payments—which are expected to amount to \$77 billion—account for \$11¼ billion of the total rise. About \$8 billion of the advance is due to the strong gains expected in personal income—from \$580 billion to \$624 billion—and an anticipated increase in capital gains. Another \$3¼ billion is directly traceable to the proposed 6 percent surcharge on individual income taxes scheduled to take effect July 1, 1967. These are partially offset by an expected increase in personal exemptions (and therefore lower withheld tax payments) allowed per-

CHART 8
Changes in Federal Government Expenditures

Note.—National income and product accounts basis.

U.S. Department of Commerce, Office of Business Economics

67-2-8

sons whose withholdings substantially exceeded liabilities in 1966, as provided for in the Tax Adjustment Act of 1966.

The proposal to increase individual income taxes exempts taxpayers whose taxable incomes are wholly within the first two tax brackets, generally \$5,000 (adjusted gross income) for married couples with two dependents and \$1,900 for single persons. The surcharge will increase individual income tax liabilities 3 percent in calendar year 1967, 6 percent in 1968, and 3 percent in 1969. Withholding rates will be raised by 6 percent on July 1, 1967 and will remain at the new level until the law automatically expires on June 30, 1969.

Estate and gift taxes, which make up about \$3 billion of personal tax and nontax payments, show no increase in fiscal 1968, and the new estimate for fiscal 1967 is well below a year ago because of the 1966 slump in stock market prices. The law permits a timelag of 15 months before payments are due.

Corporate profits tax accruals are also affected by the proposed tax increase. About one-third of the estimated \$3 billion rise in corporate tax accruals is accounted for by the 6 percent surcharge on corporate taxes effective July 1, 1967. A larger volume of profits accounts for the remainder of

the expected advance, although the estimated rise in calendar 1967 profit levels is the smallest since 1961. Taxes paid by Federal Reserve banks should show a particularly strong rise in fiscal 1968.

If Congress approves the 6 percent surcharge, corporate taxes in the national income accounts will reflect a 3 percent rise in calendar year liabilities in the first quarter, despite the July 1 effective date proposed in the budget. These taxes will jump again in the first quarter of 1968 because the full 6 percent increase in tax liabilities will be felt in that year. The suspension of the investment tax credit—slated to be lifted January 1, 1968—is estimated to increase corporate tax accruals by about equal amounts in both fiscal years.

Two additional corporate income tax proposals do not affect corporate tax accruals in the NIA budget. One would increase the estimating accuracy requirement from 70 percent to 80 percent; the other would eliminate in equal stages the present exemption of the first \$100,000 of liability from estimated payments.

Indirect business tax and nontax accruals are projected to advance less than \$½ billion, to about \$17 billion. The net increase reflects (1) about \$½

billion of normal growth, including alcohol, tobacco, and other excises along with customs duties and non-taxes; (2) more than \$¼ billion of higher user taxes and charges, principally an increase in the diesel fuel tax and in the weight tax levies on heavy trucks, but also affecting air freight and jet fuel; (3) close to \$½ billion of rate reductions. The excise tax on general and toll telephone and teletype service will be reduced under existing legislation from 10 percent to 1 percent on April 1, 1968. On the same date, the manufacturers' excise tax on passenger automobiles will fall from 7 percent to 2 percent. Under proposed legislation, the auto levy would be used to finance a new trust fund for highway beauty and safety.

Contributions for social insurance account for about \$2½ billion of the increase in NIA revenues. Almost all of the advance reflects an expected rise in the number of persons (and the volume of payrolls) covered by the social security system and the first full fiscal year effect of the increase in the social security payroll tax from 8.4 percent to 8.8 percent effective January 1, 1967, under present law. The proposed increase in the maximum earnings subject to tax from \$6,600 currently to \$7,800 proposed for January 1, 1968, makes up only \$¼ billion of the fiscal 1967-68 increase. Additional increases in the taxable earnings to \$9,000 in 1971 and to \$10,800 in 1974 are also planned. Payroll tax rates (employee-employer) would go from the current 8.8 percent to 10 percent in 1969 and to 11.1 percent in 1973 under the new proposals.

Fiscal 1968 NIA Expenditures

Federal expenditures under the NIA budget in fiscal 1968 are expected to rise \$15½ billion, substantially less than the \$21¼ billion advance expected in fiscal 1967. Continued growth in national defense purchases to meet Vietnam requirements and substantially expanded transfer payments are responsible for 80 percent of the increase.

National defense purchases of goods and services are estimated at \$72½ billion in fiscal 1968—an increase of \$6¼ billion over the previous year but only a little more than half the fiscal 1966-67 rise. Although this would be the highest level of defense purchases since fiscal 1945, it represents about 9 percent of GNP, well below the 12-14 percent levels reached during the Korean war.

Over half of the expansion in defense purchases is estimated to result from increased deliveries of major military hard goods, particularly airlift planes, helicopters, and battlefield missiles. The large excess of cash outlays for military procurement over deliveries expected in fiscal 1967 is projected to narrow considerably in fiscal 1968.

Higher personnel costs—both military and civilian—comprise about two-thirds of the remaining increase. A military and civilian pay raise is expected to contribute to this advance. The rest will come from an increased number of military personnel and somewhat higher civilian employment. By mid-1968, total active duty military personnel is estimated to be close to 3.5 million, in contrast to more than 3.3 million at the end of 1966. Civilian employment in the Defense Depart-

ment, not affected by the current employment freeze, will increase about 25,000 during the fiscal year. Research and development outlays, including a large increase in spending for the manned orbiting laboratory program of the Air Force, are scheduled to advance by ½ billion. A detailed breakdown of the Department of Defense budget is shown in table 4.

Outlays by the Atomic Energy Commission are estimated to increase slightly in fiscal 1968, reversing the trend of the past few years.

Federal nondefense purchases are projected at \$19½ billion in fiscal 1968, over \$2 billion above fiscal 1967. About three-fourths of this large advance results from a lower rate of sales of Commodity Credit Corporation stocks of wheat and feed grains. The Agriculture Department has eased acreage restrictions on these two commodities in order to attain a level of reserves adequate to meet long-run domestic and foreign requirements.

On balance, purchases of other non-defense agencies show only a modest gain. A pay raise for Federal workers and increased purchases by Health, Education, and Welfare; Veterans' Administration; Interior and certain other agencies more than offset a \$¼ billion cut in NASA purchases—the second successive decline in space outlays.

Other Federal expenditures

In addition to its direct demand for goods and services, the Federal Government affects total demand indirectly through several other types of expenditures, such as grants-in-aid, transfers, subsidies, and net interest payments. Grants-in-aid help to finance State and local programs, such as education and public assistance; the other types of expenditures increase private incomes and thus stimulate personal consumption or business investment.

Outlays other than those for purchases of goods and services are projected to rise by \$7¼ billion, less than the \$9½ billion increase estimated for fiscal 1967.

New legislation calling for major increases in social security benefits—over \$4 billion—is expected to account

for close to two-thirds of the \$6½ billion rise in transfer payments to persons. The remaining \$2½ billion can be attributed to the normal growth of existing OASDHI programs and to proposed legislation expanding medicare coverage and raising benefits to veterans. Transfers to nonprofit institutions, such as privately owned colleges and universities, are also slated to increase in fiscal 1968.

The major proposals concerning social security retirement benefits and their estimated fiscal 1968 costs are as follows:

- (1) A benefit increase amounting to at least 15 percent for all beneficiaries now on the rolls; cost: \$3.2 billion.
- (2) Minimum monthly benefit raised from \$44 to \$70; cost: \$0.7 billion.
- (3) Increased benefits paid out of

general revenues to persons 72 and over who do not meet the regular social security requirements; cost: \$0.2 billion

(4) Liberalization of the earnings test, monthly cash benefits for disabled widows, and certain other changes; cost: \$0.1 billion.

Medicare benefits are estimated to reach \$4 billion in fiscal 1968, an increase of close to \$¼ billion. Among the factors accounting for this advance are new proposals to extend coverage to disabled persons under 65 covered by the social security and railroad retirement programs, and the cost of the first full year's coverage of extended care facilities under existing programs. Increases in GI educational assistance, expanded benefits for veterans of Vietnam and a 5½ percent rise in the pensions of 1.4 million veterans, widows, and dependents add close to \$¼ billion to fiscal 1968 transfers.

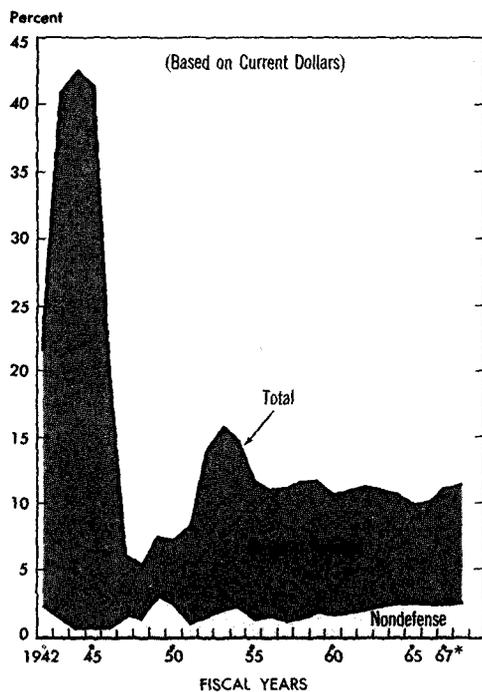

highway aid, one of the largest grant-in-aid programs, is expected to decline slightly.

For the first time in several years, subsidies (less the current surplus of Government enterprises) are expected to show a substantial decline, from \$5½ billion in fiscal 1967 to \$3½ billion in fiscal 1968. Feed-grain subsidies will drop sharply as a result of reduced payments to farmers for acreage diversion. A large reduction is also expected in the Post Office deficit as a result of the proposed \$700 million postal rate increase. Most of the additional postal revenue will come from a 1-cent increase in first-class mail and air mail. Second, third-, and fourth-class rates, except parcel post, are expected to be boosted at least 20 percent.

Other categories of NIA expenditures, such as net interest paid and foreign transfer payments, are expected to register moderate gains in fiscal year 1968.

Continued growth in grants

Grants-in-aid to State and local governments, which have quadrupled over the past 10 years, are projected to continue their growth, increasing \$2 billion to an estimated \$16¼ billion in fiscal 1968.

Many programs in the areas of health, welfare, labor, education, and urban development are expected to increase. Their growth next year reflects chiefly legislation enacted over the past few years rather than proposed new programs.

About half of the projected increase in grants occurs in areas of health and welfare. More Federal funds would go for medical assistance, community action programs, and numerous other programs in this field. Aid to urban areas also received increasing emphasis in the budget. Programs of special benefit to cities—such as those for urban renewal, mass transit, water and sewer facilities, and urban beautification—have been expanded. However,

NIA Budget Glossary

EXPENDITURES:

Government purchases of goods and services consists of the net purchases of goods and services by general government and of the gross investment of government enterprises. General government purchases comprises employee compensation and net purchases from business and from abroad. They exclude the acquisition of land, current outlays of government enterprises, transfer payments, government interest, and subsidies, as well as transactions in financial claims.

Transfer payments to persons consists of income received by persons, generally in monetary form, for which no services are rendered currently. They consist of payments under social security (including medicare), unemployment insurance, and government retirement programs, veterans' benefit (including veterans' life insurance proceeds), payments to nonprofit institutions other than for work done under research and development contracts, and a few other minor items.

Government transfer payments to foreigners consists of U.S. Government nonmilitary grants to foreign governments in cash and in kind, and of U.S. Government pensions and other transfers, as measured in the balance of payments statistics.

Grants-in-aid to State and local governments represents Federal payments to State and local governments (other than for interest on the public debt) including State and local educational institutions. They exclude outlays in kind such as farm commodities donated to these governments. Payments to public educational institutions for research and development contracts are included.

Net interest paid consists of interest outlays to U.S. residents minus interest received from them and is measured on an accrual basis. It excludes interest paid to trust funds.

Subsidies less current surplus of government enterprises: Subsidies are the monetary grants provided by government to private business. The current surplus of government enterprises represents the excess of sales receipts over current operating costs of government enterprises. In the calculation of the current surplus, no deduction is made for depreciation charges, and interest is not included in either receipts or costs.

RECEIPTS:

Personal tax and nontax payments consists of the taxes (other than contributions for social insurance) and nontax payments to general government by individuals that are not deductible as expenses of business operations. The principal taxes are income taxes, estate and gift taxes. Nontaxes include passport fees, fines, donations, and penalties. Tax refunds are deducted from payments as of the time of refund.

Corporate profits tax accruals consists of taxes levied on corporate earnings. It includes payments made by the Federal Reserve Banks to the U.S. Treasury. Additional assessments resulting from audit of tax returns are added to, and disbursements of carryback and other tax refunds are deducted from, tax liabilities in the year in which the liabilities were incurred.

Indirect business tax and nontax liability consists of tax liabilities and other general government revenues paid by business, except employer contributions for social insurance and corporate income taxes. It includes excise taxes, payments akin to taxes such as regulatory and inspection fees, fines and penalties, rents and royalties, and donations. It excludes government receipts from the sale of commodities and services to business which are similar to the ordinary purchases of intermediate products by business. Receipts from such sales are netted out of government purchases.

Contributions for social insurance consists of payments by employers, employees, self-employed, and by persons participating in the medicare programs. They are composed chiefly of social security taxes, contributions to retirement funds for government employees, and deposits by States to the unemployment trust fund.

Government surplus or deficit (—) is the excess of government receipts over government expenditures as defined in the national income and product accounts. As such, it equals the acquisition of financial assets less borrowing by general government and government enterprises. It also includes net government purchases of land. Net acquisitions of reproducible assets are excluded here because they are included in government purchases of goods and services.

^aPreliminary.

¹The figures shown here for "internal sources," "undistributed profits," and "capital consumption allowances" differ from those shown for "cash flow, net of dividends," "undistributed profits," and "capital consumption allowances" in the gross corporate product table (p. 9 of this issue of the SURVEY) for the following reasons: (1) these figures include, and the statistics in the gross corporate product table exclude, branch profits remitted from

foreigners, net of corresponding U.S. remittances to foreigners; and (2) these figures exclude and the gross corporate product figures include, the internal funds of corporations whose major activity is farming.

²Includes some categories not shown separately.

Fixed Business Capital in the United States, 1925-65

Presented below is a limited number of tables from the 1966 Capital Stock Study, which was first reported upon in the December 1966 SURVEY in the article "New Estimates of Fixed Business Capital in the United States, 1929-65." The selection of the tables shown here was governed in part by the requests from SURVEY readers since the publication of the December article. The information presented below shows gross and net stocks of fixed business capital in constant (1958) dollars and the mean age of the stock for selected years, using the Bulletin F-15 percent service lives, the Winfrey S-3 distribution of service lives, and two alternate methods of depreciation. An explanation of these terms, as well as the many alternative calculations that were made, can be found in the above-mentioned article.

Table 1.—Gross and Net Stocks of Structures and Equipment by Broad Industry Group, Bulletin F-15 Percent Service Life, Winfrey Distribution, 1925-65¹

(Value in billions of constant (1958) dollars)

Year	Gross stocks						Net stocks using straight line depreciation						Net stocks using double declining balance depreciation					
	Constant cost 1			Constant cost 2			Constant cost 1			Constant cost 2			Constant cost 1			Constant cost 2		
	All industries	Non-farm	Manu-facturing	All industries	Non-farm	Manu-facturing	All industries	Non-farm	Manu-facturing	All industries	Non-farm	Manu-facturing	All industries	Non-farm	Manu-facturing	All industries	Non-farm	Manu-facturing

Table 3.—Gross and Net Stocks of Equipment, by Broad Industry Group and by Type, Bulletin F-15 Percent Service Life, Winfrey Distribution, 1925-56—Continued

(Values in billions of constant (1958) dollars)

Year	Industry					Types of equipment																	
	All industries ¹	Non-farm	Manufacturing	Furniture and fixtures	Fabricated metal products	Engines and turbines	Tractors	Agricultural machinery (except tractors)	Construction machinery	Mining and oil-field machinery	Metal-working machinery	Special-industry machinery	General-industrial machinery	Office, computing and accounting machinery	Service-industry machines	Electrical machinery	Trucks, buses, and truck trailers	Passenger cars	Aircraft	Ships and boats	Railroad equipment	Instruments	Miscellaneous equipment

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1965 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1961 through 1964 (1954-64 for major quarterly series), annually, 1939-64; for selected series, monthly or quarterly, 1947-64 (where available). Series added or significantly revised after the 1965 BUSINESS STATISTICS went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1964 issued too late for inclusion in the 1965 volume appear in the monthly SURVEY beginning with the September 1965 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1963	1964	1965	1963	1964				1965				1966 ¹

† Revised. ‡ Preliminary. § See corresponding note on p. S-1. ¶ Revised series. Dollar figures and indexes of cash receipts and volume of marketings revised beginning 1963; data prior to May 1965 appear in the Dept. of Agriculture publication, Farm Income Situation,

July 1966. ¶ Includes data for items not shown separately. § Revised beginning Jan. 1964 to incorporate new data and to reflect use of new seasonal factors; revisions for months prior to Sept. 1965 will be shown later. * Corrected.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS

Table with columns for years 1964, 1965, 1965, 1966 (Annual, Dec., Jan., Feb., Mar., Apr., May, June, July, Aug., Sept., Oct., Nov., Dec.), and 1967 (Jan.)

GENERAL BUSINESS INDICATORS—Continued

Main data table containing 'INDUSTRIAL PRODUCTION' and 'BUSINESS SALES AND INVENTORIES' with various sub-categories and numerical values.

Revised. Preliminary. Based on unadjusted data. See corresponding note on p. S-3. Includes data for items not shown separately. The term "business" here includes only manufacturing and trade; business inventories as shown on p. S-1 cover data for all types of producers, both farm and nonfarm. Unadjusted data for manufacturing are shown on p. S-5; those for retail trade on p. S-11.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS

† Revised. ‡ As of July 1. † See corresponding note on p. S-11.
 ‡ Includes data not shown separately.
 ‡ Comprises lumber yards, building materials dealers, and paint, plumbing, and electrical stores.
 ‡ Unemployed in each group as percent of that group.

‡ Effective Feb. 1967 SURVEY, data reflect revised seasonal factors and changes in coverage, sample, and definition as follows: For all periods—data cover persons 16 years of age and over (eliminating about a million persons previously covered); beginning Jan. 1967—sample expanded (to 52,500 households) and unemployed redefined as those actively seeking a job recently and who are available for work (data reasonably comparable with those for earlier periods).

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS

[†] Revised. [‡] Includes \$27.8 bil. coverage on U.S. Armed Forces. [§] Estimated; excludes U.S.S.R., other Eastern European countries, China Mainland, and North Korea. [¶] Data for Nov.-Dec. [‡] Beginning June 1966, data exclude balances accumulated for payment of personal loans (amounting to \$1,140 million for week ending June 15). [¶] Beginning with the period noted, data reflect reclassification of companies between industries and are not strictly comparable with those for earlier periods.

[†] Revisions for 1964-Apr. 1965 for insurance written, for Jan.-Aug. 1964 and Jan.-July 1965

for premiums collected, and for 1964 for silver production (Canada), will be shown later; those for money supply and related data for 1959-July 1965 appear in the Sept. 1966 issue of Federal Reserve Bulletin. [§] Or increase in earmarked gold (-). [¶] Time deposits at all commercial banks other than those due to domestic commercial banks and the U.S. Govt. [‡] Total SMSA's include some cities and counties not designated as SMSA's. [¶] Includes Boston, Philadelphia, Chicago, Detroit, San Francisco-Oakland, and Los Angeles-Long Beach. [¶] Corrected.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965	1966												1967

† Revised. ‡ Preliminary. § Less than \$50,000. ¶ Military grant-aid shipments for Dec. 1965 (ordinarily included with Jan. 1966 data) are included in Feb. 1966 data; subsequent months will include these shipments on a 2-months delayed basis. ♂ Beginning Jan. 1966, excludes data for Singapore; such shipments amounted to \$1.0 mil. in that month. † Revisions for Jan. 1964-Nov. 1965 will be shown later. ♀ Includes data not shown separately. ○ See similar note on p. S-21. ♂ Data for semimanufactures reported as "special category" are included with finished manufactures. △ Manufactures of tobacco are included in the nonagricultural products total. § Excludes some "special category" exports.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965												1966

† Revised. † Preliminary. † See note "♂" for this page. † Number of carriers filing complete reports for 1964. † As compiled by Air Transport Assn. of America.

‡ Reflects New York City 13-day transit strike.

§ Includes data not shown separately.

¶ Beginning Jan. 1965, indexes are based on general imports, instead of imports for consumption as formerly.

‡ Excludes "special category" shipments and all commodities exported under foreign-aid programs as Department of Defense controlled cargo.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964		1965		1966										1967

* Revised. † Preliminary. ‡ Number of carriers filing complete reports for 1964 and 1965. § Data cover 5 weeks; other periods, 4 weeks. ¶ Revised total; quarterly revisions are not available. ** Preliminary estimate by Association of American Railroads. †† New series. The monthly motor carrier index (ATA) is based on a sample of carriers that represents approximately one-third of the class I and II common carriers of general freight; monthly data back to 1955 are shown on p. 40 of the July 1966 SURVEY. Railroad revenue ton-miles are compiled by Interstate Commerce Commission.

§ Effective 1st qtr. 1965, carriers reporting both intercity and local and suburban schedules are classified as intercity if intercity revenues equal or exceed 50 percent of revenues from both operations. ¶ Includes data not shown separately. ††† Comparability of data between periods shown has been affected by organizational changes; certain operations reported prior to 1965, and others reported through mid-1965, are no longer covered.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965	1966												1967

* Revised. ¹ Revised annual total; revisions are not distributed to the monthly data. [⊖]Data are reported on the basis of 100 percent content of the specified material unless otherwise indicated. [⊙]Includes data not shown separately.
² Beginning Jan. 1965, data exclude creosote in coal-tar solutions (formerly included); these average 930,000 gallons per month in 1964. ³ See note "C" for p. S-21. ⁴ Less than 500 short tons.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965	1966												1967

† Revised. ♠ Preliminary.

1 See note "C" for p. S-21.

‡ Revisions for Jan.-Oct. 1964 are shown in Bu. of the Census report M31A(64)-13.

♠ Formerly National Lumber Manufacturers Association.

FOOTNOTE FOR RAW STEEL, P. S-32.

△ Effective Jan. 1967, the term raw steel has been substituted for ingots and steel for castings; raw steel is defined as steel in the first solid state after melting, suitable for further processing or sale,

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1966												1967

Revised. Preliminary. See note "O" for p. S-21. Monthly data (1962-64), revised to 1962 canvass of nonferrous producers, are available; 1965 estimates reflect the revised benchmark. Beginning 1966, estimates are derived from a new sample and are not comparable with earlier data; revised Dec. 1965, based on new sample, 137.5 mil. lb. Data for Sept. 1963-Apr. 1964 are in terms of gross weight. Revised total; monthly revisions are not available. Effective Jan. 1967 SURVEY, data for 1965 and beginning Sept. 1966

are based on conversion factor of 24.0 base boxes per ton of steel consumed. Beginning Jan. 1966, total includes copper (totaling 10,900 tons end of Jan. 1966) held by nonconsumers, etc., not previously covered.

Consumers' and secondary smelters' stocks of lead in refinery shapes and in copper-base scrap. Stocks reflect surplus tin made available to industry by GSA. Beginning Aug. 1964, data reflect sales to the industry of metal released from the Government stockpile.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965	1966												1967

¹ Revised. ² Preliminary. ³ See note "O" for p. S-21.

⁴ Beginning Jan. 1965, gasoline excludes special naphthas; aviation gasoline represents finished grades only (alkylate excluded); commercial jet fuel (formerly included with kerosene) is included with jet fuel. ⁵ Less than 50,000 bbls. ⁶ Beginning Jan. 1965, data include demand for liquid refinery gases formerly shown under petrochemical feedstocks; comparable 1964 total, 295.1 mil. bbls.

⁷ Includes data not shown separately.

⁸ Includes nonmarketable catalyst coke.

⁹ Revisions for Jan.-Oct. 1964 will be shown later.

FOOTNOTES FOR ELECTRICAL EQUIPMENT, P. S-34.

¹ Data reflect adjustment to the 1963 Census of Manufactures; revisions back to 1963 are available.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965	1966												1967

† Revised. † Beginning Jan. 1965, excludes finished cement used in the manufacture of prepared masonry cement (2,734 thous. bbls. in 1964); annual totals include revisions not distributed to the months. ‡ Data cover 5 weeks; other months, 4 weeks. † Ginnings to Dec. 13. † Ginnings to Jan. 15. † Dec. 1 estimate of 1966 crop. † Data shown here are not strictly comparable with those for earlier periods for the following reasons: Beginning Jan. 1964, fabric classifications were revised and manmade fiber drapery fabrics were added; beginning Jan. 1966, data reflect further changes in reporting classifications, principally cotton blends. † Includes data not shown separately.

† Stocks (owned by weaving mills and billed and held for others) exclude bedsheeting, toweling, and blanketing, and billed and held stocks of denims. Effective Aug. 1965, stocks cover additional manmade fiber fabrics not previously included. † Unfilled orders cover wool apparel (including polyester-wool) finished fabrics; production and stocks exclude figures for such finished fabrics. Orders also exclude bedsheeting, toweling, and blanketing. † Total ginnings to end of month indicated, except as noted.

Unless otherwise stated, statistics through 1964 and descriptive notes are shown in the 1965 edition of BUSINESS STATISTICS	1964	1965	1965	1966											1967
