Managing Editor: Patti A. Trujillo**

**Staff Contributors to This Issue:** Kenneth P. Berkman, Leo M. Bernstein, Robert Brown, James C. Byrnes, David W. Cartwright, William K. Chung, Edwin J. Coleman, Gregory G. Fouch, Douglas R. Fox, Karl D. Galbraith, Bruce T. Grimm, Linnea Hazen, Thomas M. Holloway, Frederick G. Kappler, Martin Murphy, John C. Mugrave, Elizabeth H. Queen, Russell B. Scholl, Arthur L. Sensenig, Joseph C. Wakefield, Obie G. Whichard

**SURVEY OF CURRENT BUSINESS.** Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce, Editorial correspondence should be addressed to the Editor-in-Chief, Survey of Current Business, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230.

Annual subscription: *second-class mail*—\$30.00 domestic; \$37.50 foreign. Single copy: \$4.75 domestic; \$5.95 foreign.

*First-class mail* rates and *foreign air mail* rates available upon request.

Mail subscription orders and address changes to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Make checks payable to Superintendent of Documents.

Second-class postage paid at Washington, D.C. and at additional mailing offices.

# the BUSINESS SITUATION

**R**EVISED (45-day) estimates show that real GNP increased 9 percent at an annual rate in the second quarter of 1983, compared with the 8½-percent increase shown by the preliminary (15-day) estimates (table 1). Revisions in the major components were small. Upward revisions were in residential investment (partly due to a downward revision in prices), net exports (mainly due to a downward revision in nonpetroleum imports), nonresidential fixed investment (pro-

ducers' durable equipment), and change in business inventories (retail trade). Downward revisions were in personal consumption expenditures (mainly in housing services) and government purchases (Federal defense purchases). The increase in prices as measured by the GNP fixed-weighted price index was revised down from 5 to 4½ percent.

The revisions in the second-quarter real GNP estimates do not alter the picture of economic activity described

in the July "Business Situation." About two-thirds of the strong increase in GNP was accounted for by an extraordinarily large increase in personal consumption expenditures. A continued strong recovery in residential investment, a leveling out in the slide in nonresidential fixed investment, and a sharp deceleration in the rate of inventory liquidation also contributed to the increase in GNP. Net exports registered a sharp decline as exports fell and imports increased, and government purchases were down again, but not as much as in the first quarter.

1. Not at annual rates.

Note.—For the second quarter of 1983, the following revised or additional major source data became available: For *personal consumption expenditures*, revised retail sales for May and June; for *nonresidential fixed investment*, manufacturers' shipments of equipment for May (revised) and June, construction put in place for May (revised) and June, and a partial tabulation of business expenditures for plant and equipment for the quarter; for *residential investment*, construction put in place for May (revised) and June; for *change in business inventories*, book values for manufacturing and trade for May (revised) and June; for *net exports of goods and services*, merchandise trade for May (revised) and June; for *government purchases of goods and services*, Federal unified budget outlays for June, and State and local construction put in place for May (revised) and June; for *wages and salaries*, revised employment, average hourly earnings, and average weekly hours for May and June; for *corporate profits*, domestic book profits for the quarter; for *GNP prices*, the Consumer Price Index and the Producer Price Index for June, unit value indexes and export and import price indexes for June, and residential housing prices for the quarter.

## Corporate profits

Corporate profits from current production increased \$33 billion to \$214½ billion in the second quarter—a record increase and an all-time high.<sup>1</sup> On a percentage-change basis, the second-quarter increase in this measure of profits, which includes the inventory valuation and capital consumption adjustments, was the largest since the third quarter of 1975. The pattern in the first two quarters of 1983—an increase of \$20 billion followed by an even larger one—closely resembles the pattern in the second and third quarters of 1975. Both reflected recoveries from deep recessions that reached troughs in the immediately preceding quarters.

An increase in the domestic profits of nonfinancial corporations accounted for most of the increase in the second quarter. These profits increased \$30 billion to \$164 billion, following an increase of \$19½ billion

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes in them are differences between these rates.

(table 2). The second-quarter increase resulted from a combination of a large increase in the real product of nonfinancial corporations, a moderate increase in unit prices, and decline in unit costs. Per-unit labor and nonlabor costs both decreased; the decrease in unit labor costs was the first registered since the third quarter of 1975.

Manufacturers' profits accounted for most of the increase in nonfinancial profits. Increases in profits or reductions in losses in most major manufacturing industries reflected strong increases in sales. Increased profits of motor vehicle manufacturers reflected the effects of a very sharp increase in auto output, which in turn mirrored a sharp pickup in unit auto sales. The increase in auto output led to increased demand for tires to equip new autos, and helped boost rubber manufacturers' profits. The continuing recovery in residential construction was a major factor in a strengthening in lumber profits. An increase in the profits of petroleum manufacturers resulted from both increased margins and increased sales, as the prices of

refined products increased, while crude oil prices remained about level.

An increase in nonmanufacturing profits was widely spread: Profits of gas and electric utilities rebounded from depressed first-quarter levels; first-quarter profits reflected the effects of low demand for energy during an unusually mild winter in some parts of the country. An increase in trade profits was more than accounted for by wholesalers' profits and by retail auto dealers' profits, which reflected the sharp increase in unit auto sales.

Domestic profits of financial corporations increased \$4½ billion to \$32 billion in the second quarter, matching the increase in the first. Although nearly all major categories of financial institutions registered increased profits, most of the second-quarter increase was due to increased profits of savings and loan associations and a swing from losses to profits for mutual savings banks. These thrift institutions benefited from stable or declining interest rates on most types of deposits and abatement of interest-

rate competition for new Money Market Deposit Accounts; many thrifts had attempted to attract deposits by initially offering very high rates of interest.

Profits from the rest of the world decreased \$1½ billion to \$18½ billion in the second quarter, following a decrease of \$4 billion. The second-quarter decrease resulted from an increase in the earnings on foreign corporations' U.S. assets that outweighed an increase in the earnings on U.S. corporations' foreign assets. Foreign corporations' U.S. earnings and U.S. corporations' foreign earnings are netted in the calculation of rest-of-the-world profits. Increases occurred in both the petroleum and nonpetroleum foreign activities of U.S. corporations, as petroleum prices firmed and recoveries were underway in the economies of many industrial nations.

*Other profits measures.*—Profits before tax increased \$29½ billion to \$199 billion in the second quarter, following an increase of \$2 billion. The second-quarter level is well below the peak level of \$261 billion recorded in the first quarter of 1980. These profits exclude the inventory valuation adjustment (IVA) and the capital consumption adjustment (CCAdj). The IVA became more negative in the second quarter, decreasing \$8 billion to -\$10 billion, following an increase of \$8½ billion. The decrease resulted from increased rates of inflation of prices of goods held in inventories; the largest decreases occurred in the mining, services, transportation, retail trade, and petroleum manufacturing industries. The CCAdj increased \$11½ billion to \$25½ billion in the second quarter, following an increase of \$9 billion.<sup>2</sup> The increases reflected the effects of provisions of the Economic Recovery Tax Act of 1981 (ERTA) permitting the use of shorter service lives for measuring the depreciation on new capital (as reported to

CCAdj	-5.6	-3.5	.1	4.7	13.9	25.4

IVA Inventory valuation adjustment.  
CCAdj Capital consumption adjustment.

2. The capital consumption adjustment converts depreciation of fixed capital used up in product to a consistent basis with respect to service lives (85 percent of Internal Revenue Service Bulletin F for equipment and nonresidential structures) and depreciation formulas (straight line). It also converts depreciation to replacement cost, the valuation concept underlying national income and product accounting, from historical cost, the concept generally underlying business accounting.

the Internal Revenue Service); depreciation is a deduction from receipts in the calculation of corporate profits. As corporations depreciate increasing amounts of capital using the shorter service lives, the component of the CCAdj that adjusts tax-return depreciation to consistent service lives becomes increasingly positive. The effects of ERTA have added somewhat more than \$2 billion per quarter to the change in the CCAdj, beginning with the first quarter of 1981. The increases in the CCAdj were also consistent with relatively little change in the prices of business fixed investment.

#### **Government sector**

The fiscal position of the government sector in the national income and product accounts (NIPA's) continued to improve in the second quarter, as the combined deficit of the Federal Government and of State and local governments declined \$31 billion. This improvement was accounted for by an 11-percent decline in the Federal deficit and a 28-percent increase in the State and local surplus. However, the combined deficit, at \$112 billion, was still significantly larger than the \$81 billion deficit of a year earlier. This deterioration in the fiscal position of the government sector was more than accounted for by a \$50½ billion increase in the Federal deficit.

*The Federal sector.*—The Federal Government deficit declined \$20 billion in the second quarter, to \$163½ billion, as receipts increased significantly more than expenditures.

Receipts increased \$28½ billion, compared with \$10½ billion in the first quarter. All categories of receipts recorded strong increases, dominated by a \$10½ billion gain in corporate profits tax accruals, reflecting the large increase in corporate profits. Indirect business tax and nontax accruals increased \$7½ billion, the net effect of a \$1½ billion decline in windfall profit taxes and a \$9 billion increase in all other categories. Several new levies boosted these receipts. A 5-cent increase (to 9 cents from 4 cents per gallon) in the gasoline and diesel fuel excise tax—effective April 1, 1983, under provisions of the Highway Revenue Act of 1982—contributed

#### **SURVEY OF CURRENT BUSINESS**

\$6½ billion. A fee of 50 cents imposed on dairy farmers by the Secretary of Agriculture for each 100 pounds of milk produced—effective October 1, 1982, but delayed by an injunction until mid-April—contributed \$½ billion to nontaxes. A tax of 1 mill on each kilowatt-hour of nuclear-generated electricity—effective April 7, 1983, under provisions of the Nuclear Waste Policy Act—contributed about \$½ billion to excise taxes. (The proceeds of this tax will be used by the Federal Government to dispose of radioactive waste materials produced by utilities.)

Personal tax and nontax receipts increased \$6½ billion, compared with a \$5½ billion decline in the first quarter. In the first quarter, the effects of Federal income tax cuts more than offset the effect of increases in the tax base. In the second quarter, these legislative impacts were smaller, and the tax base increased significantly more, than in the first. Contributions for social insurance increased \$4 billion, reflecting a strong increase in wages and salaries.

Expenditures increased \$9 billion, compared with a \$14 billion decline in the first quarter, when most expenditure categories were down. In the second quarter, only nondefense purchases, subsidies less the current surplus of government enterprises, and transfer payments to foreigners declined. National defense purchases increased \$5½ billion; the increase was concentrated in purchases of military hardware, particularly aircraft and ships, each up about \$1½ billion (see table 4 on page 10). Transfer payments to persons also increased \$5½ billion. Cost-of-living adjustments for Federal civilian and military retirees each accounted for \$½ billion and unemployment benefits accounted for \$1 billion as Federal supplemental benefits increased \$2 billion and regular benefits declined \$1 billion. Net interest paid increased \$3 billion and grants-in-aid to State and local governments increased \$1 billion. Partly offsetting these increases were declines of \$6½ billion in nondefense purchases and of \$1 billion in subsidies less the current surplus of government enterprises. Within the former, agricultural purchases by the Commodity Credit Corporation (CCC)

declined \$7 billion and all other categories of purchases increased \$½ billion. Within the latter, a \$2 billion decline in the CCC deficit was partly offset by a \$1 billion increase in agricultural subsidies.

On a high-employment budget basis, the Federal fiscal position moved from a deficit of \$45 billion in the first quarter to a deficit of \$32 billion in the second (see table 3 on page 9). The high-employment deficit as a percentage of potential GNP decreased from 1.3 percent to 0.9 percent—a move toward a more restrictive fiscal position. (These estimates differ from those published previously due to last month's revisions in the NIPA's and to revisions, beginning in 1977, in several other series used in the calculation of the high-employment estimates. The estimates remain based on the potential GNP series discussed by the Council of Economic Advisers in the 1981 *Economic Report of the President*.)

*The State and local sector.*—The State and local government surplus increased \$1½ billion, to \$52 billion as receipts increased more than expenditures. The increase in the surplus was largely accounted for by a \$10½ billion increase in the "other" surplus, that is, in the surplus excluding social insurance funds.

Receipts increased \$16½ billion, compared with \$11 billion in the first quarter. Indirect business tax and nontax accruals increased \$7½ billion; sales taxes accounted for \$4½ billion and property taxes for \$2½ billion. The increase in sales taxes was much larger than in the first quarter, and reflected strong retail sales as well as rate and base changes in several states. Other categories also increased: personal tax and nontax receipts, \$4½ billion, including \$1 billion for a rate increase in Michigan; corporate profits tax accruals, \$3 billion; and contributions for social insurance, \$½ billion.

Expenditures increased \$5½ billion, compared with \$3½ billion in the first quarter. Purchases of goods and services accounted for all of the increase; all other expenditures, on balance, were unchanged. Within purchases, compensation increased \$4 billion, construction declined \$1 billion, and all other purchases increased \$2½ billion.

## Selected National Income and Product Accounts Tables

New estimates in this issue: Second quarter 1983, revised.

The abbreviations used in the tables are:

CCAdj	Capital consumption adjustment
IVA	Inventory valuation adjustment
NIPA's	National income and product accounts
<sup>p</sup>	Preliminary
<sup>r</sup>	Revised

The NIPA estimates for 1929-76 are in *The National Income and Product Accounts of the United States, 1929-76: Statistical Tables* (Stock No. 003-010-00101-1, price \$10.00). Estimates for 1977-79 and corrections for earlier years are in the July 1982 SURVEY; estimates for 1980-82 and corrections for earlier years are in the July 1983 SURVEY. These publications are available from the Superintendent of Documents and Commerce Department District Offices; see addresses inside front cover.

**NOTE.**—The implicit price deflator for GNP is a weighted average of the detailed price indexes used in the deflation of GNP. In each period, the weights are based on the composition of constant-dollar output in that period. In other words, the price index for each item (1972=100) is weighted by the ratio of the quantity of the item valued in 1972 prices to the total output in 1972 prices. Changes in the implicit price deflator reflect both changes in prices and changes in

## Reconciliation and Other Special Tables

**Table 1.—Reconciliation of Changes in Compensation Per Hour in the Business Economy Other Than Farm and Housing and Average Hourly Earnings in the Private Nonfarm Economy, Seasonally Adjusted**

	1982		1983	
	III <sup>r</sup>	IV <sup>r</sup>	I <sup>r</sup>	II <sup>p</sup>
1. Compensation per hour of all persons in the business economy other than farm and housing (percent change at annual rate) <sup>1</sup>				
2. Less: Contribution of supplements	7.2	5.4	7.1	4.4
3. Plus: Contribution of housing and nonprofit institutions	0	.4	1.1	.3
4. Less: Contribution of employees of government enterprises and self-employed and unpaid family workers	0	.1	-.3	-.3
5. Equals: Wages and salaries per hour of employees in the private nonfarm economy (percent change at annual rate)	.5	.8	.2	.1
6. Less: Contribution of nonproduction workers in manufacturing	6.8	4.8	5.5	3.7
7. Less: Contribution of non-BLS data, detailed weighting, and seasonal adjustment	-.3	-.2	-.3	-.5
8. Equals: Average hourly earnings, production and nonsupervisory workers in the private nonfarm economy (percent change at annual rate)	2.7	1.4	-.2	.4
	4.4	3.5	5.9	3.7

<sup>r</sup>Revised.<sup>p</sup>Preliminary.

1. BLS estimates of changes in hourly compensation in the nonfarm business sector for the four quarters are 7.2, 5.8, 6.8 and 4.3 percent.

**Table 2:**<sup>r</sup>Revised.<sup>p</sup>Preliminary.

1. These differences arise because component price indexes that are used in the BEA measures and in the CPI are seasonally adjusted at different levels of detail.

2. Old series. A reconciliation of changes in BEA price indexes and the new CPI-U which incorporates homeowner's equivalent rent is not yet complete.

3. The CPI-U-XI is the BLS experimental index in which a rental equivalence method is used in measuring the cost of owner-occupied housing. The PCE measures of price change also use a rental equivalence method.

**Table 2.—Reconciliation of Changes in the Implicit Price Deflator for Personal Consumption Expenditures and the Consumer Price Index for All Urban Consumers, Seasonally Adjusted**

	1983	
	I <sup>r</sup>	II <sup>p</sup>
1. Implicit price deflator for personal consumption expenditures (percent change at annual rate)	2.2	5.1
2. Less: Contribution of shifting weights in PCE	-.1	.1
New autos	-.4	1.4
Gasoline and oil	.6	-.5
Electricity, gas, fuel oil, and coal	-1.0	2.3
Furniture and household equipment	.3	.1
Food purchased for off-premise consumption	0	-1.0
Purchased meals and beverages	.4	-.5
Clothing and shoes	-.1	.5
Housing	.1	-1.1
Other	0	-1.2
3. Equals: PCE chain price index (percent change at annual rate)	2.3	5.0
4. Less: Contribution of differences in weights of comparable CPI and PCE expenditure components	1.4	.2
Gasoline and oil	1.0	-.4
Electricity, gas, fuel oil, and coal	.1	0
Furniture, appliances, floor coverings, other household furnishings	0	0
Food at home	-.1	0
Food away from home	0	.3
Apparel commodities	-.2	.1
Rent	-.5	-.1
Other	.5	.4
5. Less: Contributions of PCE expenditure components not comparable with CPI components	1.0	.2
New Auto	.1	-.1
Net purchases of used autos	0	.1
Owner-occupied nonfarm and farm dwellings—space rent	.6	.1
Services furnished without payment by financial intermediaries except life insurance carriers	.1	.2
Current expenditures by nonprofit institutions	.2	0
Other	.1	0
6. Plus: Contribution of CPI expenditure components not comparable with PCE components	-.6	-.2
New autos	.2	-.2
Used autos	.2	.1
Homeownership	-1.3	-.1
Other	.4	-.1
7. Less: Contribution of differences in seasonal adjustment <sup>1</sup>	.1	.2
8. Equals: Consumer Price Index For All Urban Consumers (CPI-U), all items (percent change at annual rate) <sup>2</sup>	-.7	4.2
Addendum: Consumer Price Index For All Urban Consumers (CPI-U-XI), all items (percent change at annual rate) <sup>3</sup>	1.3	3.3

**Table 3.—High-Employment Federal Receipts and Expenditures**

[Billions of dollars; quarters at seasonally adjusted annual rates]

Note.—These estimates differ from those published previously due to last month's revisions in the NIPA's and to revisions, beginning in 1977, in several other series used in the calculation of the high-employment estimates. The estimates remain based on the potential GNP series discussed by the Council of Economic Advisers in the 1981 *Economic Report of the President*.

# Federal Budget Developments

**I**N late July, the Office of Management and Budget released, as part of its mid-session review, revised estimates of Federal unified budget receipts and outlays for fiscal years 1983 and 1984. The new estimates reflect revised economic assumptions, reestimates of agency spending and tax collections based on more recent experience, legislation enacted by Congress, and policy changes by the administration since the April budget update.

On the basis of the revised economic assumptions, real GNP is expected to increase more in calendar 1983 than expected earlier this year (table 1). From the fourth quarter of 1982 to the fourth quarter of 1983, real GNP is estimated to increase 5.5 percent, almost 1 percentage point more than forecast in April. Real GNP is expected to continue to increase at a strong pace in the second half of 1983—6.4 percent—but to decelerate sharply to 4.5 percent in the first quarter of 1984. From the fourth quarter of 1983 to the fourth quarter of 1984, real GNP is estimated to increase 4.5 percent, one-half of 1 percentage point more than forecast earlier. (These assumptions do not incorporate the July revisions of the national income and product accounts.) Consumer prices rise somewhat more in 1983, 3.1 percent, compared with 2.5 percent; in 1984 they rise 4.4 percent, the same as forecast in April. Interest rates on 91-day Treasury bills are assumed to be higher than estimated in April—about one-half of 1 percentage point in both years—and the unemployment rate is revised down slightly.

For fiscal year 1983, a \$209.8 billion deficit is estimated, compared with \$210.2 billion in April (table 2). Receipts are \$1.6 billion higher; a \$4.7 billion upward revision due to the new economic assumptions is partly

offset by a \$3.1 billion downward revision from reestimates and policy changes. Outlays are \$1.2 billion higher, largely due to reestimates; a \$5.6 billion upward revision is partly offset by a \$4.4 billion downward revision. Major upward revisions are for social security (\$1.1 billion), Federal Deposit Insurance Corporation (\$0.9 billion), net interest (\$0.9 billion), agricultural price support and related programs (\$0.6 billion), and agriculture credit insurance fund (\$0.5 bil-

lion). The major downward revision (\$0.8 billion) results from higher Outer Continental Shelf receipts, which are an offset to unified budget outlays; all other downward revisions are relatively small and spread over a variety of programs.

For fiscal year 1984, a deficit of \$179.7 billion is estimated, compared with \$190.2 billion in April. Receipts are \$14.7 billion higher; a \$16 billion upward revision due to new economic assumptions and policy changes is

1. Insured unemployment under the State regular unemployment insurance program, excluding recipients of extended benefits, as percentage of covered employment under that program.

2. Average rate on new issues within the year. The estimates assume, by convention, that interest rates vary with the rate of inflation. They do not represent a forecast of interest rates.

Source: "Mid-Session Review of the 1984 Budget." The assumptions do not incorporate the July revisions of the national income and product accounts.

slightly offset by a \$1.2 billion downward revision from reestimates. Outlays are \$4.2 billion higher; an \$11.2 billion upward revision, largely from reestimates, is partly offset by a \$7.1 billion downward revision, largely due to the new economic assumptions. Major upward revisions are for agricultural price support and related programs (\$4.1 billion), net interest (\$1.8 billion), and social security (\$1.0 billion). Major downward revisions are for national defense (\$3.0 billion) and unemployment compensation (\$2.8 billion).

**Revised NIPA estimates.**—BEA has prepared estimates of the Federal sector on the national income and product accounting (NIPA) basis consistent with the revised unified budget estimates (table 2, and table 3 for quarterly pattern). On this basis, fiscal year 1983 receipts are \$0.6 billion higher, expenditures are \$1.7 billion lower, and the deficit is \$2.3 billion lower than estimated in April. (Details of the April estimates are discussed in the April SURVEY OF CURRENT BUSINESS.)

The upward revision in receipts is more than accounted for by corporate profits tax accruals (\$2.5 billion), and reflects higher profits in the new economic assumptions. All other categories of receipts are revised down. The largest downward revision is in personal tax and nontax receipts (\$1.0 billion) and is due to higher income tax refunds.

The downward revision in expenditures is more than accounted for by subsidies less current surplus of government enterprises (\$1.2 billion) and by nondefense purchases of goods and services, transfer payments to persons, and grants-in-aid to State and local governments (each \$0.6 billion). In subsidies less current surplus, the downward revision is due to lower agricultural subsidies; regular subsidies were revised down—to \$4.5 billion from \$6.0 billion estimated earlier—and payments in kind were revised up—to \$3.1 billion from \$2.6 billion. (See the February SURVEY for a discussion of the treatment of the payments-in-kind (PIK) program in the NIPA's.) The revision in nondefense purchases is the net result of lower Commodity Credit Corporation (CCC) purchases (\$1.2 billion) and higher crude oil purchases for the strategic

petroleum reserve (\$0.7 billion). The lower purchases by the CCC are due to lower regular purchases and higher PIK transactions, which lower purchases in the NIPA's. Partly offsetting these decreases are upward revi-

sions in net interest paid (\$0.8 billion), due to higher interest rates, and in transfer payments to persons (\$0.4 billion). In the latter, higher social security benefits are partly offset by lower unemployment benefits.

Less: Wage accruals less disbursements .....	0	0	-1.3	-.5	0	0	0	0
Surplus or deficit (—) .....	-208.2	-183.3	-163.7	-213.5	-178.7	-173.8	-162.5	-161.9

For fiscal year 1984, receipts are \$19.0 billion higher, expenditures are \$3.2 billion higher, and the deficit is \$15.8 billion lower. All categories of receipts are revised up—dominated by a \$13.1 billion revision in corporate taxes, reflecting higher profits. Personal taxes (up \$4.0 billion) and contributions for social insurance (up \$1.4 billion) reflect higher incomes; indirect business tax and nontax accruals (up \$0.5 billion) reflect higher windfall profit taxes.

The upward revision in expenditures is more than accounted for by nondefense purchases (\$4.9 billion), net interest paid (\$2.9 billion), and grants-in-aid (\$0.6 billion). The revision in nondefense purchases is largely due to higher agricultural purchases by the CCC, including lower PIK transactions, \$7.5 billion compared with \$8.7 billion estimated earlier. Partly offsetting these increases are downward revisions in national defense purchases (\$2.3 billion), subsidies less current surplus (\$1.4 billion), and transfer payments to persons (\$1.2 billion). The revision in defense purchases is due to congressional action on the MX missile program; in subsidies less current surplus, to lower agricultural subsidies; and, in transfer payments, to lower unemployment benefits.

Table 4 shows the relation between unified budget and NIPA receipts and table 5 shows the relation between unified budget outlays and NIPA expenditures.

*High-employment surplus or deficit.*—As measured on a high-employment basis, the Federal sector of the NIPA's was in deficit in calendar year 1982; the deficit will widen in 1983 by \$21½ billion (table 6). By quarter, the deficit increases significantly in the third quarter of 1983 when the final withholding rate cut under the Eco-

1. Based on a high-employment unemployment rate of 5.1 percent for 1981:1-1981:4, 5.0 percent for 1982:1-1983:1, and 4.9 percent for 1983:2-1984:3.

nomic Recovery Tax Act of 1981 becomes effective; thereafter it declines and averages \$52½ billion through fiscal year 1984.

The high-employment deficit referred to is based on a high-employment unemployment rate that is 5.1 percent in 1981, declines to 4.9 percent by mid-1983, and remains flat thereafter. Table 6 also shows what the high-employment surplus or deficit would be assuming a high-employment unemployment rate of 6 percent throughout the 1981-84 period. On this basis, the high-employment deficit is about \$20 billion to \$30 billion higher, but follows the same quarterly pattern.

# U.S. Direct Investment Abroad in 1982

**I**N 1982, the U.S. direct investment position abroad declined \$5.0 billion, or 2 percent, to \$221.3 billion at year-end. The single most important reason for the decline was record borrowing by U.S. parents from their Netherlands Antillean finance affiliates. In the absence of such borrowing, the position would have increased, although not as rapidly as in most previous years.

The decline in the position consisted of capital inflows of \$3.0 billion and negative valuation adjustments of \$2.0 billion. Capital inflows, in turn, consisted of equity and intercompany account inflows of \$8.3 billion, partly offset by reinvested earnings of incorporated foreign affiliates of \$5.3 billion.

The decline in the position in 1982 followed unusually slow growth—only 5 percent—in 1981; the decline was the first since just after World War II, when the position was adjusted downward to reflect the wartime destruction of U.S. investments abroad. The changes in the position in both 1981 and 1982 were attributable to similar factors. Borrowing from Netherlands Antillean finance affiliates was large in both years. Also, because of sluggish economic conditions worldwide, corporate illiquidity, and high U.S. interest rates, U.S. companies

had little incentive, and only limited ability, to make major new investments abroad, to expand existing investments, or to finance the operations of foreign affiliates with U.S.-source funds. In each year, U.S. direct investors sold affiliates in Canada. Finally, reduced affiliate earnings limited the funds available for reinvestment.

Direct investment income declined 29 percent, to \$22.9 billion, following more moderate declines in each of the 2 preceding years. Sizable declines in income were recorded in all major industries. The declines reflected the continued slowing of foreign economic activity, appreciation of the U.S. dollar against several major foreign currencies, and increased interest payments by U.S. direct investors on debt owed to affiliates. Other factors that depressed income in 1982 were capital losses, and losses—both capital and other—by Mexican affiliates. Net receipts of fees and royalties from foreign affiliates declined 4 percent, to \$5.6 billion.

## U.S. Direct Investment Position

At yearend 1982, the U.S. direct investment position abroad was \$221.3 billion (table 1). The position is the book value of U.S. direct investors' equity in, and net outstanding loans to, their foreign affiliates. (A foreign affiliate is a foreign business enterprise in which a single U.S. investor owns at least 10 percent of the voting securities, or the equivalent.) Thus, the position measures the net claims of U.S. parents on their affiliates, and is not a measure of the assets of the

affiliates, which are the sum of owners' equity held by, and liabilities owed to, both U.S. parents and all other persons.

By industry, 25 percent of the position was in petroleum, 41 percent in manufacturing, and 34 percent in "other" industries. Within manufacturing, the position was largest in "other manufacturing" (particularly instruments, paper, rubber, and textiles) and in chemicals. Within "other" industries, the position was largest in trade (mainly wholesale) and in finance (except banking), insurance, and real estate. A substantial portion of the position in the latter industry group was in affiliates classified as holding companies, which, in turn, held equity in, and received income from, affiliates classified in other industries.

By area, 74 percent of the position was in developed countries and 24 percent was in developing countries. The remainder was in "international." <sup>1</sup> Within the developed countries, over 60 percent of the position was in Europe, where the United Kingdom, Germany, and Switzerland had the largest shares. Within the developing countries, over 60 percent of the position was in Latin America; this share would have been even larger—over 70 percent—in the absence of the large negative position in Netherlands Antillean finance affiliates (see later discussion). Within Latin America, the position was largest in Bermuda

---

1. The "international" category contains affiliates that have operations spanning more than one country and that are engaged in petroleum shipping, other water transportation, or operating oil and gas drilling equipment that is moved from country to country during the year.

(mainly in finance affiliates), Brazil, and Mexico.

Most of the position—over 80 percent—was in incorporated foreign affiliates. The position in these affiliates is shown in table 2 as the sum of equity investment (capital stock and retained earnings) and debt investment (intercompany accounts). The latter component includes both U.S. parents' receivables from their affiliates and, as a deduction, the parents' payables to their affiliates. Because payables slightly exceeded receivables at yearend 1982, the intercompany account component of the position in incorporated affiliates was negative; thus, equity investment more than accounted for the position in these affiliates. This was a new development: Historically, U.S. parents' receivables from affiliates have exceeded their payables to affiliates.

The most important reason for the change in the relative sizes of receivables and payables was the increase in borrowing by U.S. parents from their Netherlands Antillean finance affiliates. U.S. parents' payables to these affiliates almost doubled in 1982, to \$27.7 billion (table 3). The borrowed funds were raised largely by affiliates' sales of bonds in Eurodollar markets. The bond proceeds were reloaned to the U.S. parents, which generally used them to finance their U.S. operations.

The increase in borrowing in 1982 occurred for several reasons. First, during much of the year, interest rates were lower in Eurodollar markets than in U.S. financial markets. Second, well-developed European markets for medium-term bonds offered a lower cost alternative to short-term bank borrowing. Finally, familiarity with the use of Netherlands Antillean

finance affiliates as a means for raising funds continued to grow, and a number of U.S. companies established such affiliates in 1982.

Typically, Netherlands Antillean finance affiliates have been established to enable U.S. parents to raise funds abroad without having the associated interest payments subjected to U.S. withholding taxes. The payments are exempted from such taxes by a treaty between the United States and the Netherlands Antilles. Although the United States has treaties with several other countries that provide a similar exemption, or a reduced withholding rate, the Netherlands Antilles is often chosen as a location because it does not have a withholding tax on interest payments to third countries and because most of its taxes on affiliates are structured so as to generate offsetting tax credits for the U.S. parents.

## 1982 Addition

The U.S. direct investment position abroad declined 2 percent, or \$5.0 billion, in 1982, compared with an increase of 5 percent, or \$11.0 billion, in 1981. As noted earlier, the decline in 1982 was the first since just after World War II.

The 1982 decline consisted of capital inflows of \$3.0 billion and negative valuation adjustments of \$2.0 billion. The capital inflows consisted of equity and intercompany account inflows of \$8.3 billion, partly offset by reinvested earnings of \$5.3 billion. The capital inflows were more than accounted for by the borrowing from Netherlands Antillean finance affiliates. For the reasons noted earlier, the inflows from these affiliates were only partly offset by outflows to other affiliates.

The position declined 1 percent in developed countries and 5 percent in developing countries. In "international," the position increased 7 percent.

Within developed countries, declines in the position were largest in France, Canada, and Italy. Within developing countries, they were largest in the Netherlands Antilles and Mexico.

### Valuation adjustments

The negative valuation adjustments partly reflected one-time adjustments to U.S. parents' accounts with affili-

ates as a result of a new U.S. standard for foreign currency translation (Financial Accounting Standards Board (FASB) Statement No. 52), which was announced in December 1981. Adoption of the standard was required for fiscal years beginning on or after December 15, 1982, but, encouraged by the FASB, many companies adopted it sooner. As one aspect of the new standard, certain items

1. Includes additional paid-in capital and valuation adjustments to the position.

## SURVEY OF CURRENT BUSINESS

that had to be translated at historical exchange rates under the previous standard (FASB Statement No. 8) now have to be translated at current exchange rates (with exceptions for the currencies of countries with very high rates of inflation). The valuation adjustments reflect the resulting change in the dollar value of these items. Additional adjustments will be made for future periods as the remaining parent companies adopt the new standard.

The negative valuation adjustments also reflected the reorganization of a multinational company. Previously, the company consisted of a U.S. parent company and its foreign affiliates. In the reorganization, a Panamanian holding company was set up to hold stock in both the parent and the affiliates. Because the affiliates were no longer U.S. owned, the investment in them was removed from the U.S. direct investment position abroad by means of a negative valuation adjustment. (Simultaneously, the holding company's equity in what had been the U.S. parent company was included in the foreign direct investment position in the United States.)

Partly offsetting these negative adjustments was a significant positive adjustment for Canada, where the mining affiliates of a U.S. company were sold for more than book value. Because the full sales value was a capital inflow and thus reduced the direct investment position by more than the book value carried in the position, the excess of the sales value over the book value was added back to the position by means of a positive valuation adjustment.

#### **Equity and intercompany account flows**

Equity and intercompany account inflows increased \$4.5 billion, to \$8.3 billion (table 4). Contributing to the increase were a \$3.6 billion increase in inflows from incorporated affiliates and a \$0.9 billion decline in outflows to unincorporated affiliates. (Flows to or from unincorporated affiliates are shown in a single summary account consisting of the U.S. parents' total claims, both equity and debt, on the affiliates' net assets.)

For incorporated affiliates, intercompany account inflows increased

1. Includes outflows to purchase capital stock in affiliates from unaffiliated foreigners and inflows from the sale of such stock to unaffiliated foreigners. Although such flows are not actually "to" foreign affiliates, they are so classified because they change the U.S. direct investment position in these affiliates. When the country of the affiliate differs from that of the buyer or seller of its capital stock, the flows are classified according to the country of the affiliate.

2. Includes additional paid-in capital.

\$7.9 billion. The increase reflected both a larger increase in U.S. parents' payables to affiliates in 1982 than in 1981 and a shift from an increase to a decline in their receivables from affiliates.<sup>2</sup> Outflows for equity investment in incorporated affiliates increased \$4.3 billion, from near zero, as increases in capital stock were larger, and decreases smaller, than in 1981. The larger increases in capital stock reflected the increased capitalization of Netherlands Antillean finance affiliates. The increased capitalization was required to support increased issuance of bonds by these affiliates. (Having equity-to-debt ratios that conform to generally accepted guidelines helps ensure that the U.S. tax authorities will recognize the affiliates, rather than their U.S. parents, as the issuers of bonds.) The smaller decreases in capital stock reflected the nonrecurrence in 1982 of several sell-offs of incorporated petroleum affiliates in Canada that had occurred in 1981. (As will be noted later, sell-offs of affiliates in Canada also occurred in 1982, but they were of unincorporated affiliates.)

By industry, there was a shift to outflows from inflows in petroleum, almost no change in inflows in manufacturing, and an increase in inflows in "other" industries. By area, inflows from developed countries increased \$0.5 billion, and inflows from developing countries increased \$4.0 billion. Inflows from "international" were virtually unchanged.

In petroleum, flows shifted \$5.0 billion, from inflows of \$1.1 billion in 1981 to outflows of \$3.9 billion in 1982. The inflows in 1981 reflected the sale by U.S. direct investors of several Canadian affiliates; the sales were partly in response to Canadian policies designed to increase the participation of local investors in the Canadian petroleum industry. The outflows in 1982 were spread among several oil-producing countries—mainly developing—and may have reflected a net paying down of parents' liabilities

to affiliates for the purchase of oil, as crude oil production and, to a lesser extent, prices declined.

In manufacturing, inflows declined slightly, to \$0.6 billion. The inflows were from affiliates in several areas and in several industries within manufacturing and in part reflected the general economic factors cited earlier. The largest inflows were from Australia, where a metal manufacturing affiliate was sold to local investors. The 1981 inflows, in contrast, were more than accounted for by two special factors—U.S. automakers' use of European manufacturing affiliates as a source of funds to finance their domestic (U.S.) operations, and inflows from the sale of a large paper manufacturing affiliate in Canada.

Inflows from affiliates in "other" industries increased \$9.6 billion, to \$11.6 billion. Netherlands Antillean finance affiliates accounted for \$6.1 billion of the increase; inflows from these affiliates were \$9.5 billion in 1982, compared with \$3.5 billion in 1981. Much of the remaining increase in inflows reflected the transfer, in the first quarter, of a U.S. company's unincorporated Canadian mining affiliates to a Canadian company in exchange for the Canadian company's interest in the U.S. company. In the U.S. balance of payments accounts, this transaction resulted in an inflow on U.S. direct investment abroad and an offsetting outflow on foreign direct investment in the United States.<sup>3</sup>

Also contributing to the increase in inflows in "other" industries was a \$1.8 billion shift to inflows from affiliates in trade. In addition to the general economic factors mentioned earlier, the 1982 inflows in trade reflected the sale of the British operations of a U.S. retailer to a consortium of British investors.

#### *Reinvested earnings*

Reinvested earnings of incorporated foreign affiliates declined 61 percent, to \$5.3 billion (table 5). Reinvested

earnings are equal to the earnings (that is, U.S. parents' equity in the net income after foreign income taxes) of incorporated affiliates minus gross dividends (that is, dividends before deduction of foreign withholding taxes) on common and preferred stock held by U.S. parents. The decline in reinvested earnings reflected a 30-percent decline in earnings and a 10-percent increase in gross dividends. By area, reinvested earnings declined 72 percent in developed countries, 44 percent in developing countries, and 55 percent in "international." The reinvestment ratio—the fraction of earnings reinvested—fell sharply, from 0.56 to 0.31. The ratio for 1982 was the lowest recorded in the period 1950–82.

Reinvested earnings of petroleum affiliates declined 91 percent, to \$0.4 billion, as gross dividends increased 39 percent and earnings declined 33 percent. The increase in dividend payments despite declining earnings probably reflected affiliates' reduced needs for funds to finance such items as receivables and inventories. The decline in sales that occurred during the year would be expected to be followed by a decline in receivables. Also, inventories, which had been built up in previous years in anticipation of rising prices, were drawn down in anticipation of price reductions. Nearly one-half of the decline in reinvested earnings was accounted for by a shift from positive to negative reinvested earnings of affiliates in the United Kingdom. Much of the shift was accounted for by an affiliate that, despite a large year-to-year decline in earnings, paid a large dividend in early 1982, apparently out of substantial 1981 earnings. Smaller shifts to negative reinvested earnings were recorded in several other European countries.

Reinvested earnings of manufacturing affiliates declined 68 percent, to \$1.1 billion. The decline reflected a 36-percent decline in earnings and a partly offsetting 11-percent decline in gross dividends. More than four-fifths of the decline in reinvested earnings was in Mexico, where a \$2.0 billion shift to negative reinvested earnings largely reflected a shift to negative earnings. In Mexico, shifts to negative reinvested earnings occurred in each

2. Increases (decreases) in receivables are intercompany account outflows (inflows), and increases (decreases) in payables are inflows (outflows). The change in intercompany account flows is thus the second-order change (i.e., the change in the change) in receivables minus the second-order change in payables.

3. This transaction was part of a larger set of transactions, some of which occurred in 1981, in which a petroleum company owned by the French Government acquired both U.S. and Canadian interests in the above-mentioned U.S. company. For details, see "Foreign Direct Investment in the United States in 1981," SURVEY OF CURRENT BUSINESS 62 (August 1982): 33.

1. Income divided by the average of the beginning- and end-of-year direct investment positions.

manufacturing industry. Among countries experiencing smaller, but still sizable, declines in, or shifts to, negative reinvested earnings were Canada, the United Kingdom, and Australia. Partly offsetting shifts to positive reinvested earnings were recorded in Germany and Argentina.

Reinvested earnings of affiliates in "other" industries declined 34 percent, to \$3.8 billion. The decline reflected a 21-percent decline in earnings and a 9-percent increase in gross dividends. The decline in reinvested earnings was spread among several geographical areas. By industry, the changes were mixed. Declines were recorded in trade, "other industries" (mainly services), and mining. In banking and in finance (except banking), insurance, and real estate, reinvested earnings increased; in the latter industry, however, they would have declined significantly were it not for an increase in the reinvested earnings of Netherlands Antillean finance affiliates.

### Income

Direct investment income, the return on the position, declined 29 percent, to \$22.9 billion (table 6). Income consists of earnings, as defined earlier, plus interest (net of withholding taxes) on intercompany accounts, less foreign withholding taxes on dividends (table 7). Alternatively, it is the sum of (1) interest,

dividends, and earnings of unincorporated affiliates and (2) reinvested earnings of incorporated affiliates.

General reasons for the decline in income were the continued slowing of foreign economic activity and appreciation of the U.S. dollar against several foreign currencies. These factors, which affected several areas and industries, were particularly important in Mexico, where a variety of economic difficulties—including sluggish export markets for petroleum and high interest rates on external debt—resulted in large devaluations of the peso and the institution of austerity measures and exchange controls. Income from Mexican affiliates was a negative \$1.3 billion in 1982, compared with a positive \$1.4 billion in 1981.

Part of the decline in income was due to a shift from capital gains to capital losses. (Capital gains and losses, including foreign-exchange translation gains and losses, are included in income.) Income before capital gains and losses declined 23 percent (table 8).

Income was depressed as well by a shift from net receipts to net payments of interest on intercompany accounts. The net payments were more than accounted for by payments to Netherlands Antillean finance affiliates. The shift mirrored the earlier mentioned shift from net receivables to net payables by U.S. parents in the intercompany account component of the direct investment position.

Income from petroleum affiliates declined 22 percent, to \$10.3 billion. The

decline reflected declining production and sales, as well as a weakening of petroleum prices. Downward pressure on both production and prices was exerted by the worldwide recession, inventory decumulation, and the continued effects of attempts to conserve energy and develop new sources of energy supply.

Income from petroleum affiliates declined 30 percent in developed countries, 15 percent in developing countries, and 6 percent in "international." The decline in developed countries was concentrated in Europe; over 60 percent of the decline in that area was in the United Kingdom. Over one-half of the decline in developing countries was in the Middle East.

Income from manufacturing affiliates declined 37 percent, to \$5.2 billion. It declined 25 percent in developed countries and 63 percent in developing countries. The decline in developed countries was entirely attributable to a shift from capital gains to capital losses. Three countries—Canada, the United Kingdom, and Australia—more than accounted for the decline; partly offsetting increases were recorded in Germany and Italy. Mexico, which had a \$2.1 billion shift in income from positive to negative, more than accounted for the decline in developing countries.

Within manufacturing, income declined in every industry except non-electrical machinery. The largest declines were in "other manufacturing" and in chemicals. In nonelectrical machinery, a 34-percent increase in

income reflected increased earnings of computer manufacturing affiliates.

Income from affiliates in "other" industries declined 33 percent, to \$7.3 billion. It declined 30 percent in developed countries, 35 percent in developing countries, and 75 percent in "international."

More than three-fourths of the decline in developed countries was accounted for by Canada, Switzerland, and the United Kingdom. In Canada, the decline was concentrated in mining; in Switzerland, it was concentrated in trade, and in the United Kingdom, in finance (except banking), insurance, and real estate.

In developing countries, the decline was largely accounted for by increased interest payments to Netherlands Antillean finance affiliates. Interest payments to these affiliates increased \$1.7 billion, to \$2.9 billion, in 1982 (table 3). Income from Mexican affiliates shifted \$0.5 billion from positive to negative; the shift was centered in trade. A \$0.3 billion increase in income from Bermudan affiliates, largely in finance, was partly offsetting.

The *rate of return* on the direct investment position is defined as the ratio of income to the average of the beginning- and end-of-year positions. The rate so defined is an average for existing investments, at book value, and can thus be of only limited use in predicting the profitability of prospective new investments.

The rate of return declined from 15 percent to 10 percent. The decline almost entirely reflected the 29-percent decline in income. The rate of return declined in all three major industries—from 27 to 19 percent in petroleum, from 9 to 6 percent in manufacturing, and from 14 to 9 percent in "other" industries.

\*Less than \$500,000 (±).

### Fees and Royalties

Net receipts of fees and royalties from affiliates declined 4 percent, to \$5.6 billion (table 9). Royalties, license fees, and other fees for the sale or use of intangible property—such as patents, industrial processes, trademarks, and copyrights—declined 13 percent, to \$3.2 billion. Service charges and charges for the rental of tangible property increased 17 percent, to \$2.1 billion. Film and television tape rentals declined 21 percent, to \$0.3 billion.

Fees and royalties from *petroleum* affiliates increased 57 percent (al-

though from a small 1981 base), to \$0.4 billion. The increase was in service charges and rentals for tangible property.

Fees and royalties from *manufacturing* affiliates declined 7 percent, to \$3.7 billion. A reduction in royalties and license fees, centered in Europe, more than accounted for the decline.

Fees and royalties from affiliates in "other" industries declined 4 percent, to \$1.6 billion. The decline was in royalties and license fees and in film rentals; an increase in service charges and rentals for tangible property was partly offsetting.

Tables 10–18 follow.

# Foreign Direct Investment in the United States in 1982

**HIGHLIGHTS** of foreign direct investment in the United States in 1982 were:

- The foreign direct investment position increased 13 percent, to \$101.8 billion, compared with a record 32-percent increase in 1981. The increase in the position was smaller in 1982 than in 1981 because capital inflows were smaller—\$10.4 billion compared with \$22.0 billion.

- The \$11.6 billion decline in capital inflows consisted of a sharp decline in equity and intercompany account inflows and a sizable shift to negative reinvested earnings of incorporated affiliates. The decline in capital inflows reflected sluggish econ-

ic conditions in the United States, high interest rates here and abroad, and the strengthening of the U.S. dollar vis-a-vis major foreign currencies during most of the year. The unusual shift in reinvested earnings was the result of a sharp decline in earnings in combination with an increase in gross dividends of incorporated affiliates.

- Direct investment income declined 35 percent, to \$4.8 billion. The decline reflected the severity of the U.S. economic recession. Declines occurred in nearly all major industries, but were particularly large in manufacturing, trade, and “other” industries.

## Foreign Direct Investment Position

At yearend 1982, the foreign direct investment position in the United States was \$101.8 billion (table 1). The position is the book value of foreign parents' equity in, and net outstanding loans to, their U.S. affiliates.<sup>1</sup> The position differs from total assets of the affiliates in that total assets are the sum of owners' equity in affiliates held by, and liabilities of affiliates

1. A U.S. affiliate is a U.S. business enterprise in which one foreign person owns, directly or indirectly, 10 percent or more of the voting securities or the equivalent.

<sup>a</sup>Suppressed to avoid disclosure of data of individual companies.

owed to, all persons, not only foreign parents.

By area of foreign parent, the composition of the position in 1982 was similar to that in 1981 (table 2).<sup>2</sup> In 1982, parents in Europe accounted for 67 percent, those in Canada and Japan for 10 and 9 percent, respectively, and those in "other" countries for the remaining 14 percent, of the position. Within Europe, parents in the United Kingdom and the Netherlands accounted for nearly two-thirds of the position. In "other" countries, the position was largely attributable to parents in Latin America, particularly the Netherlands Antilles, and in the Middle East, particularly Kuwait.

By industry of affiliate, 32 percent of the position was in manufacturing, 20 percent each in petroleum and trade, 6 percent in insurance, and the remaining 22 percent in "other" in-

2. A U.S. affiliate's positions and transactions with its foreign parent, that is, the first foreign person in the affiliate's ownership chain, are classified in the country of the foreign parent. Furthermore, if the U.S. affiliate had positions and transactions with a foreign affiliate of its foreign parent, such positions and transactions are classified in the country of the foreign affiliate. To simplify terminology, in this article, the term "foreign parent" is used broadly to include foreign affiliates of foreign parents as well as the foreign parents themselves.

NOTE.—The quarterly survey from which these annual estimates were derived was conducted under the supervision of James L. Bomkamp, Chief, Direct Investment in the United States Branch, International Investment Division. Project leader Gregory G. Fouch was responsible for preparing the estimates. Marie Gott edited and processed the forms. Smith W. Allnutt, Chief, Data Retrieval and Analysis Branch, designed the computer programs for data retrieval, analysis, and tabular presentation.

n.a. Not applicable.

1. Capital stock includes additional paid-in capital.

2. Part of "other Western Hemisphere." Position at yearend 1982 equaled \$6,398 million.

3. Members of the Organization of Petroleum Exporting Countries (OPEC) are: Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, Venezuela, and United Arab Emirates.

dustries.<sup>3</sup> Within manufacturing, 29 percent of the position was in chemicals, 17 percent in food products, 16 percent in machinery, and 14 percent in metals. In "other" industries, 38

percent was in finance and 27 percent in real estate.

Incorporated affiliates accounted for most of the position—94 percent (table 3). Over three-fourths of the position in these affiliates was equity (capital stock and retained earnings) and the remainder was debt (intercompany accounts). The position in unincorporated affiliates is shown as a single summary account consisting of the parents' total claims, both equity and debt, on the affiliates' net assets.

1. Includes additional paid-in capital.

## 1982 Addition

The addition to the position was \$11.4 billion in 1982, about one-half the \$22.1 billion addition in 1981. Although the addition declined sharply, it was only moderately smaller than the additions in 1980 and 1979 (\$13.9 and \$12.0 billion, respectively) and larger than those in any year before 1979.

As will be discussed later, a major reason for the sharp decline in 1982 was that a few large acquisitions occurred in 1981 for which there were no counterparts in 1982. Factors that deterred investment in 1982 included the prolonged economic recession here and abroad, which depressed earnings of U.S. affiliates and their foreign parents that might have been used for investment, and high interest rates, which raised the cost of borrowing funds. Also, the strengthening of the dollar vis-a-vis major foreign currencies during most of the year made investment in the United States more expensive in terms of foreign currencies.

1. Includes inflows to purchase capital stock in affiliates from unaffiliated U.S. persons and outflows from the sale of such stock to unaffiliated U.S. persons. Although such flows are not actually "to" U.S. affiliates they are so classified because they change the foreign direct investment position in these affiliates.

2. Includes change in additional paid-in capital.

\*Less than \$500,000 ( $\pm$ ).

<sup>D</sup> Suppressed to avoid disclosure of data of individual companies.

1. Reinvestment ratio not defined because reinvested earnings are negative.

By area of foreign parent, 70 percent of the addition was attributable to parents in Europe, 15 percent each to parents in Japan and "other" countries, and the addition attributable to parents in Canada was a small negative. Within Europe, parents in the United Kingdom, Germany, and Switzerland had the largest additions (tables 9 and 10). The additions of parents in the Netherlands and France were negative. By industry of affiliate, 28 percent of the addition was in "other" industries, 26 percent in trade, 22 percent in petroleum, 19 percent in manufacturing, and 5 percent in insurance.

The 1982 addition to the position consisted of capital inflows of \$10.4 billion and valuation adjustments of \$1.0 billion. Capital inflows, in turn, consisted of equity and intercompany account inflows of \$10.6 billion and negative reinvested earnings of \$0.2 billion.

The valuation adjustments mostly reflected a significant positive adjustment for Canada that resulted from a Canadian parent's sale of its U.S. mining affiliate for more than book

value.<sup>4</sup> Because the full sales value was a capital outflow, and thus reduced the direct investment position for Canada by more than the book value previously carried in the position, the excess of the sales value over the book value was added back to the position by means of a positive valuation adjustment.

Also, large and offsetting valuation adjustments were made to reflect a change in the manner in which a British petroleum company held its investments in the United States. Previously, the British company's U.S. investments were held indirectly through its ownership of a Netherlands holding company that, in turn, owned the U.S. affiliates. In 1982, the holding company was dissolved and the British company assumed a direct interest in the U.S. affiliates. This change necessitated a negative adjust-

4. This transaction was part of a larger set of transactions, some of which occurred in 1981, in which a French Government-owned petroleum company acquired both U.S. and Canadian interests in the U.S. mining affiliate. For details, see "Foreign Direct Investment in the United States in 1981," SURVEY OF CURRENT BUSINESS 62 (August 1982): 33.

ment for the Netherlands, to reflect the dissolution of the holding company's interest, and an offsetting positive adjustment for the United Kingdom, to reflect the British company's new direct interest in the U.S. affiliates.

<sup>a</sup>Less than \$500,000 (±).

<sup>b</sup>Suppressed to avoid disclosure of data of individual companies.

1. Income divided by the average of the beginning and end-of-year direct investment positions.

**Equity and intercompany account inflows**

Equity and intercompany account inflows were \$10.6 billion in 1982, down \$7.7 billion from the record 1981 level (table 4). Inflows to incorporated affiliates were \$9.9 billion; they consisted of \$5.4 billion of inflows for capital stock and \$4.5 billion of inflows on intercompany accounts. Inflows to unincorporated affiliates were \$0.6 billion.

The \$7.7 billion decline in inflows was widespread. By type of affiliate, inflows to incorporated affiliates declined \$7.1 billion and those to unincorporated affiliates declined \$0.6 billion. For incorporated affiliates, inflows for equity were down \$5.5 billion and inflows on intercompany accounts were down \$1.5 billion. By area, inflows from all major areas declined. By industry, they declined sharply in "other" industries, petroleum, and manufacturing.

In "other" industries and petroleum, the sharp declines in inflows were mainly attributable to two unusually large transactions that occurred in 1981, for which there were no counterparts in 1982. One of these was the acquisition of a U.S. mining company by a U.S. petroleum affiliate of a Government-owned company in France (see footnote 4 to text); the other was the acquisition of a U.S. construction company by a State-owned company in Kuwait. Excluding these two trans-

<sup>a</sup>Less than \$500,000 (±).<sup>b</sup>Suppressed to avoid disclosure of data of individual companies.

actions, inflows to petroleum affiliates, which declined \$2.3 billion, to \$1.0 billion, would have increased slightly, and inflows to affiliates in "other" industries, which declined \$4.7 billion, to \$2.6 billion, would have declined only \$0.6 billion, largely in real estate (tables 11 and 12).

The decline in real estate probably reflected the effect of the U.S. recession, high interest rates, and the slowdown in appreciation of U.S. real estate values in recent years. Particularly sizable was the decline in inflows to real estate affiliates of Canadian parents.

In finance, inflows did not change much in total, but there were several large offsetting changes. On the one hand, inflows to affiliates of parents in the United Kingdom and Japan declined sharply; 1981 inflows to these affiliates had been boosted by the acquisition of two large U.S. banks, one by British and one by Japanese investors. On the other hand, outflows from a French-owned U.S. affiliate decreased sharply, as there was a slowdown in the increase in receivables due from its parent in 1982 compared with 1981. (Increases in affiliate receivables are intercompany account outflows.) This affiliate raises funds in U.S. credit markets and lends them to its parent; the amount raised in 1982 was much less than in 1981.

Inflows to *manufacturing* affiliates declined \$1.4 billion, to \$3.6 billion. Although declines occurred in all industries within manufacturing, more than one-half of the decline was in "other manufacturing." Declines in machinery and metals were also sizable.

The decline in "other manufacturing" was largely accounted for by a German-owned automobile manufacturing affiliate, which had a smaller decrease in receivables due from its parent in 1982 than in 1981, and by Netherlands-owned affiliates manufacturing paper products and nonmetallic mineral products.

In *trade*, inflows increased \$0.7 billion, to \$3.0 billion. The increase was more than accounted for by affiliates of parents in the United Kingdom and Italy; inflows to these affiliates combined increased about \$0.9 billion. Nearly one-half of the increase was accounted for by two affiliates—a British-owned retail trade affiliate,

which acquired a U.S. department store chain, and an Italian-owned wholesale trade affiliate selling motor vehicles and equipment, which had a sizable shift to net inflows on intercompany accounts.

#### *Reinvested earnings*

Reinvested earnings of incorporated affiliates shifted \$3.9 billion, to a negative \$0.2 billion—the first year of negative reinvested earnings since this series began in 1947 (table 5). Reinvested earnings are equal to earnings (that is, foreign parents' shares in net income after U.S. income taxes) of incorporated affiliates minus gross dividends (that is, dividends before deduction of U.S. withholding taxes) on common or preferred stock held by foreign parents.

The shift in reinvested earnings was the result of a \$3.5 billion decrease in earnings in conjunction with a \$0.4 billion increase in gross dividends. Despite severely depressed earnings, many affiliates paid large dividends, perhaps in response to their foreign parents' needs for funds during the recession. (See the following section for a discussion of changes in direct investment income, of which earnings is the major component.) The reinvestment ratio—the fraction of earnings reinvested—shifted from a positive 0.65 to one that is not defined because reinvested earnings were negative.

Reinvested earnings either declined or shifted to negative in all major industries. The changes were particularly large in manufacturing, trade, and petroleum.

In *manufacturing*, reinvested earnings declined from a negative \$0.2 billion to a negative \$1.5 billion. The deterioration reflected a large shift to losses and small increase in gross dividends. All industries within manufacturing except food products contributed to the deterioration (tables 13 and 14). Particularly depressed were reinvested earnings in "other manufacturing" and metals. In food products, reinvested earnings increased, as earnings increased.

Reinvested earnings of *trade* affiliates shifted to a small negative amount. The shift reflected a substantial decrease in earnings coupled with a large increase in gross dividends.

Contributing substantially to the shift were affiliates of parents in Japan, the Netherlands, and the United Kingdom.

In *petroleum*, reinvested earnings declined \$0.9 billion, as earnings declined and gross dividends increased. The decline in reinvested earnings was more than accounted for by Netherlands-owned affiliates. However, more than one-half of the decline for Netherlands-owned affiliates was offset by an increase for British-owned affiliates—offsetting changes that were due to the previously mentioned shift in the direct ownership of certain affiliates from the Netherlands to the United Kingdom.

In "other industries," reinvested earnings shifted to a negative \$0.4 billion. The shift largely reflected a shift from positive to negative earnings; gross dividends increased slightly.

#### Income

Direct investment income, the return on the position, declined 35 percent, to \$4.8 billion, following a 21-percent decline in 1981 (table 6). Income consists of U.S. affiliates' earnings (as defined earlier), plus interest (net of withholding taxes) on intercompany accounts, less U.S. withholding taxes on dividends (table 7). Alternatively, it is the sum of (1) interest, dividends, and earnings of unincorporated affiliates, and (2) reinvested earnings of incorporated affiliates.

The declines in income in 1981 and 1982 followed sharp increases in 1978–80 (table 8). The declines largely reflected the impact of the U.S. economic recession on affiliate earnings. Partly offsetting was a \$1.0 billion increase in interest payments, which was largely attributable to a buildup of affiliates' payables at yearend 1981, primarily to finance major acquisitions in 1981–82.

Income declined in nearly all major industries. In manufacturing, income declined nearly 100 percent, in trade and in "other" industries, nearly 50 percent each, and in petroleum, 17 percent. These declines contrasted with sharp increases averaging over 50 percent annually during 1978–80.

In *manufacturing*, income declined \$0.9 billion, to less than \$0.1 billion. More than one-half of the decline was

<sup>a</sup>Less than \$500,000 (±).<sup>b</sup>Suppressed to avoid disclosure of data of individual companies.

in metals (tables 15 and 16). The decline in metals was largely attributable to Swiss and French-owned affiliates, whose earnings shifted to net losses. In "other manufacturing," income shifted \$0.3 billion to net losses, mainly because German-owned affiliates manufacturing automotive products and parts had larger operating losses in 1982 than in 1981. In chemicals, affiliates' income declined \$0.1 billion, and, in machinery, affiliates had slightly larger operating losses in 1982 than in 1981. In contrast, income of affiliates in food products increased somewhat.

Income of *trade* affiliates declined \$0.7 billion, to \$0.8 billion. The decline reflected a sharp decrease in earnings, partly offset by a sizable increase in interest payments. A large number of affiliates, particularly those of parents in Japan and the Netherlands, reported poor operating results.

In "other" industries, income declined \$0.7 billion, to \$0.8 billion. The decline was centered in real estate, finance, mining, and transportation services, with particularly large declines for several Netherlands-owned affiliates in real estate and a British-owned affiliate in finance.

Income of *petroleum* affiliates declined \$0.6 billion, to \$2.8 billion. The

decline was more than accounted for by a \$1.1 billion decline in income of Netherlands-owned affiliates, partly offset by a \$0.9 billion shift to positive income of British-owned affiliates. A large share of these offsetting changes was due to the shift from Netherlands to British direct ownership of affiliates discussed earlier. Affiliates of parents in Canada and "other Western Hemisphere" also had sizable declines in income.

In contrast, income of *insurance* affiliates increased \$0.3 billion. The increase was more than accounted for by a \$0.5 billion shift from capital losses to capital gains in these affiliates' income. The shift reflected increases in the market value of stock and bond portfolios held by the affiliates—particularly those of parents in the United Kingdom, Canada, and Switzerland—as U.S. stock and bond markets rebounded strongly during the second half of 1982.

The rate of return on the direct investment position—income divided by the average of the beginning- and end-of-year positions—declined sharply from 9.4 percent to 5.0 percent. The decline was the result of the decline in income and the increase in the average position. Rates of return declined in all major industries, except insurance.

## Fees and Royalties

Net payments of fees and royalties by U.S. affiliates declined \$0.4 billion, to less than \$0.1 billion (table 8). Fees and royalties consist of net payments by U.S. affiliates to their foreign parents for the sale or use of intangible property, such as patents, industrial processes, trademarks, and copyrights; service charges; charges for the rental of tangible property; and film and television tape rentals.

The decline in net payments was largely attributable to a \$0.2 billion increase in net receipts in trade and a \$0.2 billion decline in net payments in "other" industries. The increase in net receipts in trade was mostly accounted for by Japanese-owned affiliates, which had a large increase in receipts for warranty services performed on motor vehicles imported from their parents, and by a British-owned affiliate, which reported a sizable decline in payments to its parent for the purchase of trade names. The decline in "other" industries was largely accounted for by a British-owned affiliate, which had a substantial decline in payments to its parent for film and television tape rentals, and a Kuwaiti Government-owned affiliate, which had an increase in receipts from its parent for construction and other engineering services.

# The International Investment Position of the United States in 1982

THE net international investment position of the United States increased \$12.2 billion in 1982, compared with \$35.8 billion in 1981 (table 1). The 1982 addition, the smallest since 1978, consisted of \$30.2 billion in net capital outflows that was partly offset by unusually large valuation adjustments of \$18.0 billion. These adjustments largely reflected price appreciation of foreign holdings of U.S. Treasury and corporate securities. Net capital outflows on U.S. bank-reported transactions remained large, and net capital inflows on direct investment were larger than in 1981. Other private net capital inflows on transactions with unaffiliated foreigners were large, as claims were reduced significantly more than liabilities.

Although increases in U.S. bank-reported claims and liabilities, mostly reflecting interbank activities of international banking facilities (IBF's), were large, banking transactions with foreigners slowed in 1982. After mid-year, as the worldwide recession deepened, interbank lending as well as lending to unaffiliated foreigners slowed markedly. Lending was further curtailed by increased uncertainties and risks associated with actual or prospective external debt reschedulings by a number of financially troubled countries.

Net capital inflows on U.S. direct investment abroad primarily reflected the severity of the worldwide recession and increased utilization of Netherlands Antillean finance affiliates to borrow in the Eurobond market to finance U.S. parent operations. Capital inflows for foreign direct investment in the United States were reduced by one-half.

Foreign holdings of U.S. securities (including U.S. Treasury securities) increased. There were large net pur-

chases of high-yielding U.S. bonds and price appreciation on existing holdings of securities from U.S. bond and stock market gains in the second half of the year. The dollar's appreciation in exchange markets also attracted foreign purchases of dollar-denominated assets.

The net U.S. international investment position was \$168.6 billion at yearend 1982. U.S. assets abroad increased \$117.3 billion to \$834.2 billion, mostly from capital flows (tables 2 and 3). Foreign assets in the United States increased \$105.1 billion to \$665.5 billion. Capital flows of \$87.9 billion were augmented by \$17.3 billion in price appreciation of foreign holdings of U.S. Treasury and corporate securities.

## *Relationship of capital flows to the current account*

In terms of accounting entries, the net capital flow component of the U.S. international investment position equals the balance on current account in U.S. international transactions, plus allocations of special drawing rights (SDR's) by the International Monetary Fund (IMF), and an entry for the statistical discrepancy in the accounts (table 1, line 9 and memoranda). However, because capital flows and current-account transactions are simultaneously determined and interact through exchange rates and other factors, there is no simple cause and effect relationship between them.

<sup>p</sup> Preliminary.

<sup>r</sup> Revised.

The 1982 increase in the net investment position occurred in the face of a shift to a U.S. current-account deficit. This anomaly may be explained by the very large statistical discrepancy—more than \$41 billion in 1982. The discrepancy was probably in large part accounted for by unrecorded capital inflows. If these inflows

had been recorded, the increase in the net investment position would have been correspondingly smaller, or even could have shifted to a decrease. Therefore, if the statistical discrepancy is large, the net investment position is at best only a rough indicator of the international balance sheet of the United States at the end of any given period.

## Changes in U.S. Assets Abroad

### Bank claims

U.S. claims on foreigners reported by banks increased \$109.3 billion to \$402.3 billion (line 19 of tables 2 and 3). The establishment and subsequent operation of IBF's accounted for three-fourths of the increase in re-

<sup>r</sup>Preliminary.

<sup>p</sup>Revised.

<sup>1</sup>Less than \$500,000 ( $\pm$ ).

<sup>2</sup>Reflects sales to the public from U.S. Treasury gold stock; these demonetizations are not included in the international transactions presentation.

<sup>3</sup>Represents gains or losses on foreign currency-denominated assets and liabilities due to their revaluation at current exchange rates.

<sup>8</sup>See table 3, footnote 8.

ported claims (table 4). The sizable transfers to IBF's of existing assets and liabilities and of business formerly booked at overseas offices obscure the underlying slowdown in U.S. bank lending to foreigners. The major factors contributing to the slowdown were the worldwide recession and the related decline in international trade. Attractive financing conditions in the bond and equity markets throughout the year may have also slowed bank

lending. In the second half of the year, much slower growth in both IBF and other bank lending reflected increased concern over banks' country risk exposure in a number of areas.

The increase in IBF claims in 1982 included the transfer of claims at the time of IBF establishment, the transfer of ongoing foreign business, and the booking of new business at IBF's. Although much of the transferring of existing positions and subsequent

transfers of ongoing business was from other U.S. offices, leaving the U.S.-reported international position unaffected, large amounts came from branches located abroad, thus augmenting reported foreign claims and liabilities of U.S. banking institutions. For the most part, U.S.-owned banks transferred claims and liabilities booked at their Caribbean branches, and to a lesser extent at their London branches, to IBF's (table 5, lines 7,

<sup>‡</sup>Includes U.S. gold stock.<sup>\*</sup>Less than \$500,000 ( $\pm$ ).

1. Data for 1978-81 are revised; data for 1982 are preliminary.

2. Also includes paid-in capital subscription to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

3. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

4. For the most part, represents the estimated investment in shipping companies operating under the flags of Honduras, Panama, and Liberia, and in U.S. affiliated multinational trading

companies, finance and insurance companies, not designated by country.

5. U.S. holdings of Japanese shares may be underestimated. This is in part due to the recording of security transactions by the country of transactor rather than the country of issuer.

6. Details not shown separately are included in totals in lines 21 and 28.

7. Details not shown separately are included in line 20.

8. Primarily includes U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

9. Includes U.S. Treasury notes denominated in foreign currencies sold through foreign central banks to domestic residents in country of issue. These notes are subject to restricted transferability.

10). In contrast, foreign-owned agencies and branches in the United States did not transfer claims and liabilities from foreign offices to the same extent, because this would have increased their foreign business earnings subject to U.S. income taxes. However, foreign-owned agencies and branches did shift claims and liabilities from their U.S. offices to IBF's. Overall, U.S. bank-reported claims and liabilities would have been considerably lower in the absence of IBF establishment and operations.

Both IBF's and other U.S. banks were the primary suppliers of funds to the Eurobank markets for the first 9 months of the year. Some of the increase in claims on their own foreign

offices represented U.S. parent bank funding of IBF's via these offices; part replaced funds lost by foreign offices from a sharp decline in deposits of unaffiliated foreigners. Funding of overseas banking offices from the United States was facilitated by a fall-off in demand for U.S. bank credit and a sharp decline in the cost of funds in the United States. However, both intra- and interbank lending slowed rapidly in the second half of the year, reflecting the decline in demand for international bank credit associated with the worldwide recession. Claims on own foreign offices increased \$18.8 billion in the first half of the year, compared with \$11.8 billion in the second. Claims on unaffiliated

banks and others increased \$47.3 billion, compared with \$27.8 billion.

Other factors contributing to the slowdown, especially in claims on unaffiliated foreigners, were the inability of a number of developing countries to meet their external debt payment schedules and bankruptcies of several large corporations and financial institutions abroad. Banks became increasingly cautious about additional lending as they reassessed their country risk exposure. Mexico, Brazil, and Argentina were among major borrowers who requested rescheduling of payments on their international indebtedness.

Claims on foreigners for banks' customer accounts increased only \$3.6 billion, compared with \$8.9 billion in 1981 (table 4). Most of the growth in 1982 was in overseas deposits, mainly in the United Kingdom, of U.S. money market mutual funds. That increase was sharply curtailed after the first quarter, partly in response to concerns about banks' country risk exposure.

#### Foreign securities

Holdings of foreign securities by U.S. residents increased \$12.1 billion; this 19-percent increase, to \$75.3 billion, was the largest annual increase since 1976 (line 15 of tables 2 and 3). Strong rallies in foreign bond and stock markets in the second half of the year contributed to an increase in net purchases of \$8.0 billion and price appreciation of \$5.3 billion. An exchange rate loss of \$1.2 billion, mostly in foreign stocks, was partly offsetting.

U.S. holdings of foreign bonds, largely dollar denominated, appreciated \$4.5 billion. An additional \$6.6 billion increase was through net purchases—mainly of foreign bonds newly issued in the United States and largely in the second half of the year. New issues were limited in the first half due to high U.S. interest rates and the availability of more favorable terms in Eurobond markets. By August, U.S. rates began to fall rapidly along with the general easing of credit conditions; rates of Aaa rated bonds declined from over 15 percent

12	Other foreigners	131.5	140.4	133.5	87.5	94.3	83.8

at midyear to 12 percent by yearend. Concurrently, bond prices increased 30 percent, providing a strong incentive for foreign borrowers, especially Canada and the World Bank, to borrow in the United States. Borrowing in the U.S. market was encouraged also by a Securities and Exchange Commission (SEC) ruling late in 1981 that permitted "shelf registration." Under this ruling, prospective foreign borrowers were permitted to register with the SEC and then wait up to 2 years for market conditions favorable to their issue. Most new issues were initiated through shelf registration in 1982.

U.S. holdings of Canadian bonds increased \$5.1 billion to \$31.6 billion. Although less than the near-record placements of 1981, new issues of Canadian bonds, at \$3.1 billion, were still large, in part because of the differential in Canadian over U.S. bond rates. However, Canada also relied more on other foreign sources in 1982 than in 1981, and placed proportionately more in the Eurobond market. U.S. holdings of World Bank bonds increased; new issues were \$1.6 billion and price appreciation was \$0.6 billion. Holdings of Western European bonds increased \$2.7 billion; of the \$2.7 billion, \$0.7 billion was in new issues, largely Scandinavian; \$1.0 billion was in U.S. net purchases of outstanding bonds; and the remainder was due to price appreciation. U.S. holdings of developing countries' bonds increased only slightly. Holdings of Latin American countries' bonds dropped in value, due to small net U.S. sales and price depreciation.

U.S. holdings of foreign stocks increased \$1.2 billion to \$18.6 billion. Net purchases of \$1.4 billion were augmented by almost \$1.0 billion in price appreciation, reflecting second-half rallies on most foreign stock exchanges. Exchange rate losses amounted to \$1.0 billion. U.S. holdings of Western European issues jumped 23 percent to \$7.2 billion, as nearly \$1.0 billion in purchases—mainly of Netherlands, French, and British stocks—were added to portfolios. Western European stock price increases averaged 20 percent, and U.K. prices showed a 34-percent increase. Despite a rally in the Canadian market, U.S. investors' net holdings

of Canadian stocks declined slightly, to \$8.9 billion. U.S. investors purchased \$0.3 billion in Japanese stocks, all in the second half of the year, increasing holdings to \$1.6 billion.

#### *U.S. direct investment abroad and other private assets*

U.S. direct investment abroad declined 2 percent, or \$5.0 billion, to \$221.3 billion (line 14 of tables 2 and 3). The decline reflected the worldwide recession and record foreign borrowing through Netherlands Antillean finance affiliates; excluding borrowing from these finance affiliates, U.S. direct investment abroad increased 2 percent. Declining sales and production severely depressed overseas earnings. With accelerated dividend repatriation to the United States, reinvested earnings of incorporated affiliates were only \$5.3 billion in 1982, compared with \$13.5 billion in 1981. U.S. parent corporations borrowed heavily in the medium-term Eurobond markets—where rates were generally lower than in the United States—via their Netherlands Antillean finance affiliates. Part of this borrowing represented replacement of high-cost short-term bank debt and part represented lower cost financing than available in the United States for less-than-prime-rated companies. U.S. corporations placed \$10.2 billion in Eurobonds in 1982, compared with \$3.7 billion in 1981. Net inflows, including proceeds of Eurobond placements, from Netherlands Antillean finance affiliates increased to a record \$9.5 billion, from \$3.5 billion.

Modest changes in U.S. direct investment occurred in Western Europe, Japan, and Canada. Canadian investments were reduced by an exchange of U.S. company's Canadian mining affiliates for Canadian interests in the United States. (This transaction also affected foreign direct investment in the United States.) Excluding payables due to the Netherlands Antilles, U.S. investments in Latin America and other developing countries increased, largely the result of net capital flows to petroleum affiliates.<sup>1</sup>

Other U.S. claims on unaffiliated foreigners reported by nonbanking concerns decreased by \$8.5 billion to \$27.3 billion, the first decrease in nearly two decades (line 18 of tables 2 and 3). Commercial claims decreased \$3.1 billion (capital inflow), reflecting depressed trade, high U.S. interest rates, an appreciating dollar, and the need for internal corporate funds. Financial claims decreased \$3.9 billion, as companies reduced deposits and short-term investments in Caribbean banking centers and Canada. An increase in the exemption level for required reporting decreased claims \$1.6 billion.

#### *U.S. official reserve assets and other U.S. Government assets*

U.S. reserve assets increased \$3.9 billion to \$34.0 billion (line 3 of tables 2 and 3). The U.S. reserve position in the IMF increased \$2.3 billion to \$7.4 billion. For the past few years, heavy drawings of dollars from the IMF by developing countries have increased the U.S. reserve position. Holdings of SDR's increased \$1.2 billion to \$5.3 billion. Both the reserve position and SDR holdings (valued by the IMF in units of SDR's) were lowered in dollar terms because the dollar appreciated against the SDR in 1982. Foreign currency holdings increased \$0.4 billion to \$10.2 billion; net acquisitions of \$1.0 billion were partly offset by exchange rate losses of \$0.6 billion. Net acquisitions of \$2.1 billion in Mexican and Brazilian currencies resulted from swap transactions with those countries, both of which had serious external debt problems. Holdings of German marks decreased \$1.8 billion, reflecting repayment of maturing U.S. Treasury foreign currency notes issued to German residents in 1978 and 1979.

Other U.S. Government assets increased \$5.5 billion to \$73.9 billion (line 8 of tables 2 and 3). Stepped-up credit financing of military sales and a \$1.0 billion prepayment in August to Mexico for future petroleum deliveries contributed to the increase, which occurred despite a decline in Export-Import Bank lending.

1. For details, see "U.S. Direct Investment Abroad in 1982" in this issue.

## Changes in Foreign Assets in the United States

### *Foreign official assets in the United States*

Foreign official assets in the United States increased \$8.4 billion to \$189.2 billion (line 21 of tables 2 and 3). Purchases of \$3.2 billion were augmented by a \$5.2 billion appreciation in the value of U.S. Treasury and corporate securities. Assets of industrial countries decreased \$6.1 billion, largely from sales of dollars to support their currencies in exchange markets, particularly in the first half of the year when the dollar appreciated rapidly.

OPEC members added only \$7.4 billion to their U.S. holdings and actually reduced them in the last quarter. Dollar assets of other developing countries increased \$2.3 billion, largely reflecting substantial purchases of U.S. Treasury securities by a Far Eastern country. Most other developing countries, especially several in Latin America, drew down their dollar assets in meeting their balance of payments and debt service requirements.

### *Other foreign assets*

U.S. liabilities to private foreigners and international financial institutions reported by banks increased \$64.3 billion to \$229.6 billion (line 36 of tables 2 and 3). Large increases at IBF's were partly offset by declines at other U.S. banking offices. Liabilities booked at IBF's increased \$73.7 billion, of which 70 percent occurred in the first half of the year. As was the case with IBF claims, transfers included the rebooking of liabilities from foreign offices in Eurobank markets. Foreign deposit growth in the United States was sharply reduced in the second half of the year, reflecting U.S. banks' reduced demand for funds and declining U.S. interest rates.

For the year, bank liabilities increased to all foreign areas. The increase in liabilities to Western Europe accelerated to \$28.6 billion; in-

trabank liabilities to own foreign offices increased \$14.2 billion and to unaffiliated banks \$8.7 billion, both largely to the United Kingdom. Liabilities to Caribbean banks increased \$18.7 billion; \$5.7 billion was to own foreign offices and \$11.4 billion to unaffiliated banks. There was a \$10.1 billion increase to Latin American residents other than banks, who were attracted to dollar-denominated assets because of sharp depreciations of their currencies in exchange markets. Liabilities to Canada increased \$1.5 billion, and those to international and regional financial institutions increased \$0.8 billion—partly the investment of net proceeds from World Bank bonds newly issued in the United States.

Investor preference for dollar-denominated assets was evident from the record \$7.2 billion increase, to \$25.8 billion, in foreign private holdings of U.S. Treasury securities (line 35 of tables 2 and 3). Western Europeans, mainly British and Swiss accounts, were the largest buyers; they more than doubled net purchases in 1982. The \$1.8 billion redemption of maturing U.S. Treasury mark-denominated bonds issued to German residents in 1978 and 1979 was partly offsetting.

Foreign holdings of U.S. securities other than Treasury securities increased \$17.9 billion to \$93.3 billion (line 30 of tables 2 and 3). Price appreciation increased bond holdings 30 percent and stock holdings 13 percent, accounting for about two-thirds of the increase. The strength of the dollar and high yields encouraged foreign purchases.

The second-half stock market rally in the United States boosted both stock values and foreign demand. Although gross transactions increased substantially, net purchases increased slowly until December, when purchases jumped to \$1.0 billion. For the year, net purchases of \$3.6 billion and price appreciation of \$8.6 billion resulted in a \$12.2 billion increase in foreign holdings of U.S. stocks. Western European holdings increased \$8.6 billion to \$53.6 billion, led by \$3.1 billion in net purchases by British residents. Since October 1979, when British exchange controls were eliminated, British holdings have increased \$11.5 billion or 133 percent. The in-

crease partly reflected the substantial appreciation of the dollar against sterling in the past 2 years. Among other holding in Western Europe, Swiss holdings decreased \$0.5 billion, French and German holdings increased \$0.1 billion and \$0.3 billion, respectively, and Dutch holdings were unchanged. Total Western European holdings appreciated \$6.0 billion in price. Outside Western Europe, holdings amounted to \$23.2 billion and were unchanged.

Foreign holdings of U.S. corporate and other bonds increased \$5.7 billion to \$16.5 billion. Holdings increased \$3.2 billion due to price appreciation in the last half of the year: \$2.5 billion of net purchases were mostly in the first half before U.S. long-term interest rates dropped sharply. Net foreign purchases of outstanding bonds were \$1.9 billion, and new issues sold abroad by U.S. corporations were \$0.6 billion. (An additional record \$10.3 billion in Eurobonds was issued abroad by U.S. corporations through their Netherlands Antillean finance affiliates. See discussion under U.S. direct investment abroad.) Foreign demand for long-term fixed-income dollar securities was particularly strong from mid-1981 to mid-1982, when yields were 2½ to 3 percentage points above Eurobond rates and the dollar was appreciating. German residents acquired \$1.9 billion, and Swiss and French residents accounted for the remainder of the \$2.2 billion in net purchases by Western Europeans. Including an increase of \$2.7 billion due to price appreciation, Western European holdings were \$12.8 billion at yearend. Holdings from all other areas were \$3.6 billion.

Foreign direct investment in the United States increased \$11.4 billion, or 13 percent, to \$101.8 billion, compared with a record 32-percent increase in 1981 (line 29 of tables 2 and 3). Several unusually large acquisitions had swelled the 1981 increase; also, the slowdown in 1982 partly reflected reduced financial capital requirements during the U.S. recession. The 1982 increase in foreign direct investment was comprised of equity and intercompany account inflows of \$10.6 billion, small negative reinvested earnings, and a \$1.0 billion upward valuation adjustment. The adjustment reflected the sale of a U.S. mining af-

filiate by its Canadian parent for more than its book value. The negative reinvested earnings, which indicated that more income was drawn from U.S. affiliates than was earned, was the first recorded. Only U.S. petroleum affiliates had positive reinvested earnings.<sup>2</sup>

2. For details, see "Foreign Direct Investment in the United States in 1982" in this issue.

U.S. liabilities to unaffiliated foreigners reported by nonbanking concerns decreased \$4.1 billion to \$25.8 billion, the first decrease since 1976 (line 33 of tables 2 and 3). An increase in exemption levels for required reporting resulted in a loss in coverage of \$1.0 billion and the remaining decrease of \$3.1 billion mainly reflected a \$2.8 billion decline in trade payables to petroleum-exporting countries

in the Middle East—a drop related to the falloff in petroleum trade worldwide. U.S. companies also reduced their financial liabilities to Caribbean banking centers, to Japan, and to countries in Western Europe, by a total of \$1.5 billion. Offsetting was a \$1.7 billion increase in commercial liabilities, perhaps partly reflecting advance payments by foreigners to U.S. firms as the dollar appreciated.

## State Personal Income, 1980-82: Revised Estimates

### Revision policy

Preliminary annual estimates of State personal income, which are derived from quarterly estimates, are released each April. The quarterly estimates are based primarily on the Bureau of Labor Statistics' Establishment (790) Survey. More reliable annual estimates, including revised estimates for earlier years, are released in August. The August estimates are prepared in greater component detail than the quarterly estimates and are based primarily on Federal and State government administrative records.

These estimates, with further revisions to the years 1980-82, will form the basis for local area annual personal income as well as revised State quarterly personal income estimates to be released next April.

Comprehensive revisions are initiated periodically—approximately every 5 years—at the national level and extended, where appropriate, to the State and local area levels. The completion of the most recent cycle of comprehensive revisions to State personal income is described in the August 1982 SURVEY OF CURRENT BUSINESS.

ness expense, as well as certain other personal payments to government agencies that are convenient to treat as taxes. Personal taxes include income, estate and gift, personal property, and selected license taxes. Personal contributions for social insurance are not treated as taxes. Nontax payments include passport fees, fines and penalties, donations, tuition and fees paid to schools and hospitals operated by government, and miscellaneous revenues. Per capita disposable personal income is the disposable personal income divided by resident population as of July 1.

The definitions underlying the State estimates of personal income are essentially the same as those underlying the personal income estimates in the national income and product accounts. The major difference is that the national estimates include income of residents of the United States temporarily working abroad (including Federal civilian and military personnel and employees of U.S. firms), whereas the State estimates include only the income of persons currently residing and/or working in the 50 States and the District of Columbia. Another difference between the national and State series relates to the classification of income into farm and nonfarm categories, as shown on table 3. In the national estimates, farm income consists of farm earnings and agricultural net interest; in the States estimates, it is limited to farm earnings.

For a summary description of the sources and methods used in preparing national estimates of personal income, see pages 18-40 in the November 1979 SURVEY. A description of sources and methods used in preparing State personal income will be published, together with the entire time series of annual State estimates, under the title *State Personal Income, 1929-82*; publication is planned for 1984.

THIS article presents estimates of State personal income—that is, income from all sources received by persons residing in each State. Table 1 presents total and per capita personal income for 1959, 1969, and 1979-82. Table 2 presents total and per capita disposable personal income for the same years. Table 3 presents personal income by type and earnings (labor and proprietors' income) by industry for 1980-82.

The estimates for 1980-82 supersede those published in the April 1983 SURVEY. The estimates for 1982 are presented in detail for the first time; those for 1980 and 1981 reflect routine national revisions presented in the July 1983 SURVEY, as well as more complete source data for States. Estimates for years prior to 1980, which are not revised, are in the August 1982 SURVEY: total and per capita personal income for 1929-79, total and per capita disposable personal income for 1958-79, and personal income by type and earnings by industry for 1979.

The personal income of a State is the income received by, or on behalf of, all the residents of that State. It consists of the income received by per-

sons from all sources, that is, from participation in production, from transfer payments from government and business, and from government interest, which is treated like a transfer payment. Persons consist of individuals, nonprofit institutions, private noninsured welfare funds, and private trust funds. Proprietors' income is treated in its entirety as received by individuals. Life insurance carriers and private noninsured pension funds are not counted as persons, but their saving is credited to persons. Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments, less personal contributions for social insurance. Per capita personal income is the total personal income of residents (for the year) divided by the resident population as of July 1.

Disposable personal income is personal income less personal tax and nontax payments. This item includes personal tax payments (net of refunds) that are not chargeable to busi-

## Fixed Reproducible Tangible Wealth in the United States, 1979-82

- Fixed Nonresidential Private and Residential Capital
- Government-Owned Fixed Capital
- Durable Goods Owned by Consumers

Estimates of fixed reproducible tangible wealth in the United States for 1979-82 are shown in tables 1-19. They incorporate the revised national income and product account estimates for 1980-82 that appeared in the July 1983 SURVEY OF CURRENT BUSINESS. Fixed nonresidential private and residential capital is shown in tables 1-8; government-owned fixed capital, in tables 9-15; and durable goods owned by consumers, in tables 16-19.

Earlier estimates for the wealth series are unrevised and appeared in the following issues of the SURVEY: fixed nonresidential private and residential capital for 1925-76, February 1981, and for 1977-78, October 1982; government-owned fixed capital for 1925-58, March 1980, for 1959-72, February 1981, and for 1973-78, October 1982; and durable goods owned by consumers for 1925-63, March 1979, for 1964-76, April 1981, and for 1977-78, October 1982. Summary statements of methodology appeared in the following issues of the SURVEY: fixed nonresidential private

and residential capital, April 1976; government-owned fixed capital, March 1980; and durable goods owned by consumers, March 1979.

More detailed wealth estimates for 1925-79, together with the investment series used to derive them and a detailed statement of methodology, appear in the U.S. Department of Commerce, Bureau of Economic Analysis, *Fixed Reproducible Tangible Wealth in the United States, 1925-79* (Washington, D.C.: U.S. GPO, March 1982). This publication is available from the Superintendent of Documents, U.S. GPO, Washington, D.C. 20402 (Stock number 003-010-00102-0, price \$13.00).

The detailed wealth estimates through 1982 and the investment series used to derive them also are available on a computer tape. To order this tape, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230. Please specify BEA Capital Stock Data Tape (accession number BEA-NIW-80-002) and include remittance for \$120.00 payable to the Bureau of Economic Analysis.

## Alternative Estimates of Capital Consumption and Domestic Profits of Nonfinancial Corporations, 1979-82

Estimates of capital consumption and domestic profits of nonfinancial corporations for 1979-82, based on alternative depreciation formulas and valued at historical and current costs, are shown in tables 1-3. They incorporate the revised national income and product account (NIPA) estimates for 1980-82 that appeared in the July 1983 SURVEY OF CURRENT BUSINESS. The depreciation formulas used are straight-line and double-declining balance; service lives used are 100 percent of Internal Revenue

Service Bulletin F (F), 85 percent of Bulletin F (.85F), 75 percent of Bulletin F (.75F), and 100 percent of Bulletin F through 1940 with a gradual decrease to 75 percent of Bulletin F in 1960 (F to .75F). Earlier estimates are unrevised and appeared in the following issues of the SURVEY: for 1929-76, April 1981, and for 1977-78, October 1982. A statement of methodology appeared in the March 1976 SURVEY.

# CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1979 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (available from the Superintendent of Documents for \$9.50, stock no. 003-010-00089-9) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1975 through 1978, annually, 1947-78; for selected series, monthly or quarterly, 1947-78 (where available).

The sources of the series are given in the 1979 edition of BUSINESS STATISTICS; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 171-172. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1978 and descriptive notes are as shown in the 1979 edition of BUSINESS STATISTICS	1981	1982	1982								1983					
	Annual		June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July

## GENERAL BUSINESS INDICATORS

PERSONAL INCOME BY SOURCE †																	
Seasonally adjusted, at annual rates: †																	
Total personal income ..... bil. \$.	2,435.0	2,578.6	2,572.5	2,589.8	2,586.7	2,597.4	2,617.8	2,633.1	2,645.0	2,652.6	2,650.5	2,670.1	2,689.1	2,722.3	2,735.6	2,751.0	
Wage and salary disbursements, total ..... do...	1,493.2	1,568.1	1,571.7	1,578.9	1,579.2	1,581.2	1,583.1	1,583.1	1,591.8	1,608.9	1,616.3	1,632.1	1,652.2	1,661.1	1,673.3	1,673.3	
Commodity-producing industries, total ..... do...	509.5	509.2	513.7	512.1	508.7	505.9	501.0	498.6	499.0	508.6	510.0	517.1	522.0	527.7	533.8	533.8	
Manufacturing ..... do...	385.3	383.8	387.7	386.9	384.6	382.8	378.3	377.2	376.7	383.8	384.7	387.9	393.5	397.5	401.3	406.4

**FOOTNOTES FOR PAGES S-1 THROUGH S-32**  
**General Notes for all Pages:**

- r Revised.
- p Preliminary.
- e Estimated.
- c Corrected.

**Page S-1**

† Revised series. See Tables 2.6 - 2.9 in the July 1983 SURVEY for revised estimates back to 1980. See Tables 2.6 - 2.9 in the July 1982 SURVEY for revised estimates for 1977-79. Pre-1977 estimates are available in *The National Income and Product Accounts of the United States, 1929-76: Statistical Tables*.

‡ Includes inventory valuation and capital consumption adjustments.

\* New series. Detailed descriptions begin on p. 18 of the Nov. 1979 SURVEY. See note "†" for this page for information on historical data.

§ Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.

**Page S-2**

1. Based on data not seasonally adjusted.

# Includes data not shown separately.

‡ Revised series. For wholesale see note "‡" for p. S-8. For manufacturing see note "†" for p. S-3. For retail see note "†" for p. S-8.

† See note "†" for p. S-3.

§ See note "†" for p. S-8.

¶ See note "‡" for p. S-8.

\* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.

**Page S-3**

‡ Revised series. For wholesale see note "‡" for p. S-8. For manufacturing see note "†" for this page. For retail see note "†" for p. S-8.

† Revised series. Data have been revised back to 1972. A detailed description of these revisions and historical data appear in the reports "Manufacturers' Shipments, Inventories, and Orders" M3-1.10 (1972-1980) and M3-1.12 (1977-82), available from the Bureau of the Census, Washington, D.C. 20233.

§ See note "†" for p. S-8.

¶ See note "‡" for p. S-8.

\* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.

# Includes data for items not shown separately.

**Page S-4**

1. Based on data not seasonally adjusted.

† See note "†" for p. S-3.

# Includes data for items not shown separately.

‡ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

\* For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

**Page S-5**

1. Based on unadjusted data.

2. Beginning with data for January 1983, the index is affected by a change in methodology used to compute the homeownership component. For additional information regarding this change see p. S-36 of the Feb. 1983 SURVEY.

† See note "†" for p. S-3.

‡ Compiled by Dun & Bradstreet, Inc.

# Includes data for items not shown separately.

§ Ratio of prices received to prices paid (parity index).

\* Revisions, back to 1975 for some commodities, are available upon request.

¶ See note "‡" for p. S-4.

**Page S-6**

1. See note 2 for p. S-5.

2. Index no longer available from the source, BLS; see also p. S-36 of the Feb. 1983 SURVEY.

§ For actual producer prices of individual commodities see respective commodities in the Industry section beginning p. S-19. All data subject to revision four months after original publication.

† Revised series. Stage-of-processing producer price indexes have been revised back to 1976 to reflect updated industry input-output relationships and improved classification of some products.

# Includes data for items not shown separately.

‡ Effective Feb. 1983 SURVEY, data have been revised back to 1978 to reflect updated seasonal factors. Effective Feb. 1982 SURVEY, data have been revised back to 1977 to reflect updated seasonal factors. These revisions are available upon request.

¶ Effective with the Feb. 1983 SURVEY, the percent change and indexes as shown here have been revised back to 1967 except for the transportation group and services which were revised back to 1978. These revisions as well as those for indexes not shown here are available from the Bureau of Labor Statistics, U.S. Department of Labor, Washington, D.C. 20212.

1. Computed from cumulative valuation total.
2. Index as of Aug. 1, 1983: building, 359.4; construction, 384.7. Revised index as of Jan. 1, 1982: building, 323.3; construction, 344.9.
- # Includes data for items not shown separately.

§ Data for July, Sept., Dec. 1982, and Mar. and June 1983 are for five weeks; other months four weeks.

**Page S-7**

1. Advance Estimate.
2. Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-14.

§ Data include guaranteed direct loans sold.

‡ Effective April 1983 SURVEY, wholesale trade data have been revised for Jan. 1973-Dec. 1982. Revised data are available upon request.

† Effective April 1983 SURVEY, retail trade data have been revised for 1978-1983. Revised data and a summary of the changes are available from the Census Bureau, Washington, D.C. 20233.

# Includes data for items not shown separately.

**Page S-8**

1. Advance Estimate.
2. Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-14.

§ Data include guaranteed direct loans sold.

‡ Effective April 1983 SURVEY, wholesale trade data have been revised for Jan. 1973-Dec. 1982. Revised data are available upon request.

† Effective April 1983 SURVEY, retail trade data have been revised for 1978-1983. Revised data and a summary of the changes are available from the Census Bureau, Washington, D.C. 20233.

# Includes data for items not shown separately.

**Page S-9**

1. Advance estimate.
2. Effective Jan. 1979 data, sales of mail-order houses are included with department store sales.

3. As of July 1.

# Includes data for items not shown separately.

‡ Revisions for Jan. 1977-Oct. 1979 appear in "Current Population Reports," Series P-25, No. 870, Bureau of the Census.

† Effective with the January 1983 SURVEY, the seasonally adjusted labor force series have been revised back to January 1978. Revised monthly series appear in the January 1983 issue of *Employment and Earnings*. Effective with the February 1982 SURVEY, the labor force series have been revised back to 1970 to reflect the 1980 Census of Population. Seasonal adjustment factors were revised accordingly. Revised monthly series appear in the February 1982 issue of *Employment and Earnings*. Revised annual series will appear in the March 1982 issue of *Employment and Earnings*, U.S. Department of Labor, Bureau of Labor Statistics.

\* New series. The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is employment as a percent of the total noninstitutional population, 16 years and over.

† See note "†" for p. S-8.

**Page S-10**

1. This series has been discontinued.
2. These unemployment rates are for civilian workers only. The unemployment rate for all workers, including the resident armed forces, was 9.3 in July 1983.

† Effective June 1983 SURVEY, data have been revised back to April 1981 (not seasonally adjusted) and January 1978 (seasonally adjusted) based on the March 1982 benchmark levels and updated seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1982 Benchmarks," in the June 1983 issue of *Employment and Earnings*. Effective June 1982 SURVEY, data have been revised back to 1977 based on March 1981 benchmark levels and updated seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1981 Benchmarks," in the June 1982 issue of *Employment and Earnings*. Effective July 1981 SURVEY, data have been revised back to 1974 to reflect new benchmarks and new seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1980 Benchmarks," in the July 1981 issue of *Employment and Earnings*.

‡ See note "†" for p. S-9.

**Page S-11**

1. See note "†" on p. S-10.
- ‡ This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

¶ Production and nonsupervisory workers.

**Page S-12**

1. This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision. Use the corresponding unadjusted series.
2. This series has been discontinued.

† See corresponding note on p. S-10.

¶ Production and nonsupervisory workers.

‡ Earnings in 1977 dollars reflect changes in purchasing power since 1977 by dividing by Consumer Price Index.

§ Wages as of Aug. 1, 1983: Common, \$15.44; Skilled, \$20.24.

**Page S-13**

1. Average for Dec.
2. Reported annual; monthly revisions are not available.
3. Effective December 1, 1982, there was a break in the series. The key changes involved additions to the reporting panel and the exclusion of broker or dealer placed borrowings under any master note agreements. Previous statistics do not reflect these changes.
4. Effective April 1982 SURVEY, the series for work stoppages involving six or more workers have been discontinued and have been replaced by series for work stoppages involving 1,000 or more workers.

# Includes data for items not shown separately.

§ For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial bank and U.S. Government, less cash items in process of collection; for loans, exclusive of loans to and Federal funds transactions with domestic commercial banks and include valuation reserves (individual loan items are shown gross; i.e. before deduction of valuation reserves).

\* New series. Beginning Dec. 1978, data are for all investment account securities; comparable data for earlier periods are not available.

© Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from state benefits paid data.

@@ Insured unemployment as a percent of average covered employment in a 12-month period.

**Page S-14**

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months.

2. Average for the year.
3. Daily average.

4. Beginning Jan. 1981, data are for top-rated only. Prior data cover a range of top-rated and regional dealer closing rates. See also note 3 for this page.

5. Beginning Oct. 1981, data represent the total surplus or deficit (budget surplus or deficit plus off-budget surplus or deficit). See also note 1.

6. Interest rate charged as of Aug. 1, 1983 was 10.30.

# Includes data for items not shown separately.

§ The Department of Health, Education, and Welfare was redesignated as the Department of Health and Human Services by the Department of Education Organization Act.

© Adjusted to exclude domestic commercial interbank loans and Federal funds sold to domestic commercial banks.

† Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent. Data through Oct. 1979 show a maturity for 120-179 days. Beginning Nov. 1979, maturity is for 180 days.

@ Data through Oct. 1979 show a maturity for 150-179 days. Beginning Nov. 1979, maturity is for 180 days.

@@ Average effective rate

**Page S-15**

1. Beginning 1983, the reporting Frequency has been changed from a monthly to a quarterly basis.

† Effective Feb. 1983 SURVEY, the money stock measures and components have been revised back to 1959. Effective April 1980 SURVEY, the monetary aggregates were redefined by the Federal Reserve. The redefinition was prompted by the emergence in recent years of new monetary assets—for example, negotiable order of withdrawal (NOW) accounts and money market mutual fund shares—and alterations in the basic character of established monetary assets—for example, the growing similarity of and substitution between the deposits of thrift institutions and those of commercial banks. Monthly data from 1959 to date are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, D.C. 20551.

‡ Composition of the money stock measures is as follows:

*M1*.—This measure is currency plus demand deposits at commercial banks and interest-earning checkable deposits at all depository institutions—namely NOW accounts, automatic transfer from savings (ATS) accounts, and credit union share draft balances—as well as a small amount of demand deposits at thrift institutions that cannot, using present data sources, be separated from interest-earning checkable deposits.

*M2*.—This measure adds to *M1* overnight repurchase agreements (RP's) issued by commercial banks and certain overnight Eurodollars (those issued by Caribbean branches of member banks) held by U.S. nonbank residents, money market mutual fund shares, and savings and small-denomination time deposits (those issued in denominations of less than \$100,000) at all depository institutions. Depository institutions are commercial banks (including U.S. agencies and branches of foreign banks, Edge Act corporations, and foreign investment companies), mutual savings banks, savings and loan associations, and credit unions.

*M3*.—This measure equals *M2* plus large-denomination time deposits (those issued in denominations of \$100,000 or more) at all depository institutions (including negotiable CD's) plus term RP's issued by commercial banks and savings and loan associations.

*L*.—This broad measure of liquid assets equals *M3* plus other liquid assets consisting of other Eurodollar holdings of U.S. nonbank residents, bankers acceptances, commercial paper, savings bonds, and marketable liquid Treasury obligations.

## Includes ATS and NOW balances at all institutions, credit union share draft balances, and demand deposits at mutual savings banks.

\* Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.

© Small time deposits are those issued in amounts of less than \$100,000. Large time deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions.

# Includes data for items not shown separately.

§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

@@ Annual data for 1978-82 and monthly data for 1982 have been revised to exclude private placements. Monthly revisions for 1978-81 are not available.
