## PITTSBURGH METROPOLITAN AREA EMPLOYMENT – MARCH 2012

### Rate of Employment Increase Faster than National Average

Total nonfarm employment for the Pittsburgh, Pa. Metropolitan Statistical Area (MSA) stood at 1,147,000 in March 2012, up 18,700 or 1.7 percent, over the year, the U.S. Bureau of Labor Statistics reported today. During the same period, national employment rose 1.5 percent. Sheila Watkins, the Bureau’s regional commissioner, noted that the March increase was the 23<sup>rd</sup> consecutive month of over-the-year job gains in the area, following 18 months of consecutive job losses. (See chart 1 and table 1; Technical Note at end of release contains the metropolitan area definition. All data in this release are not seasonally adjusted; accordingly, over-the-year analysis is used throughout.)

**Chart 1. Total nonfarm employment, over-the-year percent change in the United States and the Pittsburgh metropolitan area, March 2002-March 2012**

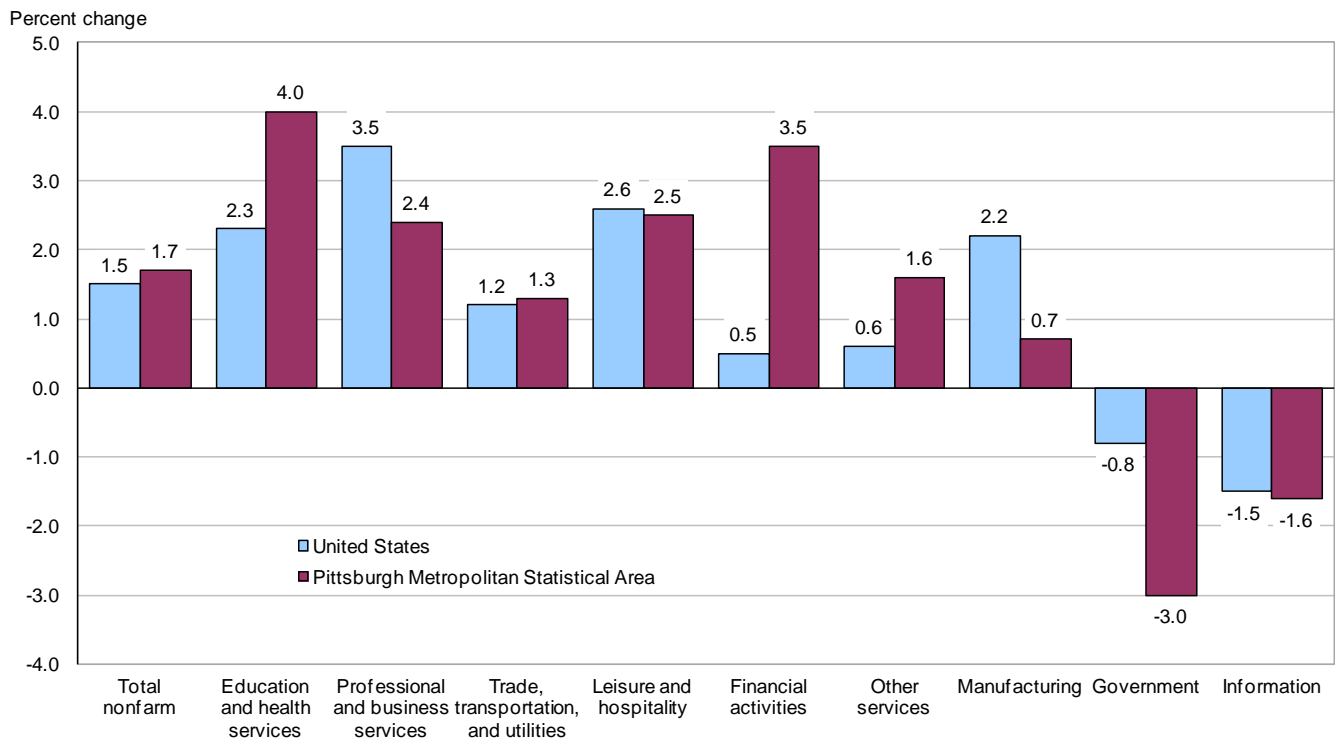

Source: U.S. Bureau of Labor Statistics

In the Pittsburgh metropolitan area, the education and health services supersector gained 9,600 jobs from March 2011 to March 2012, more than any other industry. The 4.0-percent increase was greater than the 2.3-percent national advance for this industry over the last 12 months. (See chart 2.) In Pittsburgh, over-the-year increases in the education and health services industry have continued uninterrupted since October 1995; nationally, this industry has registered over-the-year job growth stretching back to June 1945 without interruption. As of March 2012, this supersector was the largest industry in the Pittsburgh area, employing over one-fifth of the local workforce.

The professional and business services supersector had the second-largest employment increase locally, gaining 3,900 jobs over the last 12 months. This gain represented a 2.4-percent growth rate, slower than the 3.5-percent rate for the nation. The recent advance was the local industry’s 24<sup>th</sup> consecutive over-the-year increase.

Since March 2011, three other industries added from 2,400 to 2,700 jobs in the Pittsburgh area—trade, transportation, and utilities; leisure and hospitality; and financial activities. Of these three supersectors, only financial activities had employment growth well above the U.S. average, up 3.5 percent locally and 0.5 percent nationally. The mining and logging industry added 1,200 jobs in the Pittsburgh area over the year; no other industry gained 1,000 or more jobs during this period.

**Chart 2. Over-the-year percent change in employment by industry supersector, United States and the Pittsburgh metropolitan area, March 2012**

Source: U.S. Bureau of Labor Statistics

The government supersector lost 3,900 jobs in the Pittsburgh area from March 2011 to March 2012. The public sector also lost jobs across the nation; however, the local area’s 3.0-percent rate of decline was faster than the nation’s 0.8-percent decrease. No other industry lost 1,000 or more jobs in the Pittsburgh area over the year.

## Technical Note

This release presents nonfarm payroll employment estimates from the Current Employment Statistics (CES) program. The CES survey is a Federal-State cooperative endeavor in which State employment security agencies prepare the data using concepts, definitions, and technical procedures prescribed by the Bureau of Labor Statistics.

**Definitions.** Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period which includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2007 version of the North American Industry Classification System.

**Method of estimation.** The employment data are estimated using a "link relative" technique in which a ratio (link relative) of current-month employment to that of the previous month is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these ratios. Small-domain models are used as the official estimators for approximately 39 percent of CES published series which have insufficient sample for direct sample-based estimates.

**Annual revisions.** Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports which are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

**Reliability of the estimates.** The estimates presented in this release are based on sample survey and administrative data and thus are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data are also subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the special estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding.

**Employment estimates.** Measures of sampling error for state CES data at the supersector level are available on the BLS Web site at [www.bls.gov/sae/790stderr.htm](http://www.bls.gov/sae/790stderr.htm). Information on recent benchmark revisions for states is available at [www.bls.gov/sae/](http://www.bls.gov/sae/).

**Area definitions.** The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget, dated December 21, 2009. A detailed list of the geographic definitions is available at <http://www.bls.gov/lau/lausmsa.htm>.

The **Pittsburgh, Pa. Metropolitan Statistical Area (MSA)** includes Allegheny, Armstrong, Beaver, Butler, Fayette, Washington, and Westmoreland counties in Pennsylvania.

### Additional information

Industry employment data for states and metropolitan areas from the CES program are also available in the above-mentioned news releases and from the Internet at ([www.bls.gov/sae/](http://www.bls.gov/sae/)).
