

# Panel 2: Current Industry Research Roadmaps

**Moderator:**

***James Merritt***

# Technology Roadmaps

A **technology roadmap** is a plan that matches short-term and long-term goals with specific technology solutions to help meet those goals.

Developing a roadmap has three major uses.

- Helps reach a consensus about a set of needs -collaborate
- It provides a mechanism to help forecast technology developments –cofounding through coalitions
- It provides a framework to help plan and coordinate technology developments –coordination

**We need to agree on technical priorities for future research!**

# Industry Panel Roadmaps

- Each roadmap is at varying level of completeness
- Roadmaps can be designed in many formats and each organization decides what format and level of detail is most useful to them
- Most roadmaps are living documents and are updated and revised as needed

# Welcome Panel Members

## To the Forum on behalf of PHMSA, NAPSR and the R&D Forum Steering Committee

- Daphne D’Zurko –NYSEARCH/NGA
- Maureen Droessler -Operations Technology Development
- Mark Piazza -Pipeline Research Council International

# Speak Up/Out!

- **Questions from the floor after panel presentations if time permits**
  - Floor Mics
  - Index Cards at Registration Desk
