
Promoting Geosynthetics Use on Federal Lands Highway Projects

Publication No. FHWA-CFL/TD-06-009

December 2006

U.S. Department
of Transportation
**Federal Highway
Administration**

Central Federal Lands Highway Division
12300 West Dakota Avenue
Lakewood, CO 80228

FOREWORD

The Federal Lands Highway (FLH) of the Federal Highway Administration (FHWA) promotes development and deployment of applied research and technology applicable to solving transportation related issues on Federal Lands. The FLH provides technology delivery, innovative solutions, recommended best practices, and related information and knowledge sharing to Federal agencies, Tribal governments, and other offices within the FHWA.

The objective of this study was to provide guidance and recommendations on the potential of systematically including geosynthetics in highway construction projects by the FLH and their client agencies. The study included a literature search of existing design guidelines and published work on a range of applications that use geosynthetics. These included mechanically stabilized earth walls, reinforced soil slopes, base reinforcement, pavements, and various road applications. A survey of personnel from the FLH and its client agencies was performed to determine the current level of geosynthetic use in their practice. Based on the literature review and survey results, recommendations for possible wider use of geosynthetics in the FLH projects are made and prioritized. These include updates to current geosynthetic specifications, the offering of training programs, development of analysis tools that focus on applications of interest to the FLH, and further studies to promote the improvement of nascent or existing design methods.

F. David Zanetell, F.E., Director of Project Delivery
Federal Highway Administration
Central Federal Lands Highway Division

Notice

This document is disseminated under the sponsorship of the U.S. Department of Transportation (DOT) in the interest of information exchange. The U.S. Government assumes no liability for the use of the information contained in this document. This report does not constitute a standard, specification, or regulation.

The U.S. Government does not endorse products or manufacturers. Trademarks or manufacturers' names appear in this report only because they are considered essential to the objective of the document.

Quality Assurance Statement

The FHWA provides high-quality information to serve Government, industry, and the public in a manner that promotes public understanding. Standards and policies are used to ensure and maximize the quality, objectivity, utility, and integrity of its information. The FHWA periodically reviews quality issues and adjusts its programs and processes to ensure continuous quality improvement.

1. Report No. FHWA-CFL/TD-06-009	2. Government Accession No.	3. Recipient's Catalog No.	
4. Title and Subtitle <i>Promoting Geosynthetics Use on Federal Lands Highway Projects</i>		5. Report Date December 2006	
		6. Performing Organization Code	
7. Author(s) Mohammed A. Gabr, Ph.D., P.E., Brent Robinson, P.E., James G. Collin, Ph.D., P.E.; and Ryan R. Berg, P.E.		8. Performing Organization Report No.	
9. Performing Organization Name and Address North Carolina State University Department of Civil, Construction and Environmental Engineering Raleigh, North Carolina, 27695		10. Work Unit No. (TRAVIS)	
		11. Contract or Grant No. DTFH68-05-X-00035	
12. Sponsoring Agency Name and Address Federal Highway Administration Central Federal Lands Highway Division 12300 W. Dakota Avenue, Suite 210 Lakewood, CO 80228		13. Type of Report and Period Covered Final Report September 2005 – December 2006	
		14. Sponsoring Agency Code HFTS-16.4	
15. Supplementary Notes COTR: Roger Surdahl, FHWA-CFLHD. Advisory Panel Members: Scott Anderson and Mike Voth, FHWA-FLH; Daniel Alzamora, FHWA-RC; Khamis Haramy, Marilyn Dodson, Steve Deppmeier, and Heidi Hirsbrunner, FHWA-CFLHD; Gary Evans, FHWA-WFLHD; and Barry Siel and Luis Rodriguez, FHWA-RC. This project was funded under the FHWA Federal Lands Highway Technology Deployment Initiatives and Partnership Program (TDIPP).			
16. Abstract Geosynthetics are currently perceived to be “under-used in the Federal Lands Highway (FLH) practice.” Accordingly, this study aims to develop recommendations to identify, promote, and advance the use of geosynthetic materials across the FLH in the Roadway, Bridge/Structures, and Geotechnical areas. Personnel from the FLH and its client organizations were surveyed to determine current use and barriers to implementation of geosynthetic technologies. A review of recent literature and existing national design guidelines was undertaken to determine the current state of practice and possible technologies that could be implemented in the near future. Recommendations are formulated to provide the basis for a multi-year effort that will culminate in advancing the use of geosynthetic materials in the FLH projects. These include updates to current geosynthetic specifications, development of training programs and analysis tools that focus on applications of interest to the FLH, and needed further studies to promote the improvement of nascent or existing design methods.			
17. Key Words GEOSYNTHETICS, MSE WALLS, SLOPES BASE REINFORCEMENT, ROADS, PAVEMENT, FOUNDATION, EMBANKMENT, SEEPAGE, BARRIERS		18. Distribution Statement No restriction. This document is available to the public from the sponsoring agency at the website http://www.cflhd.gov .
