# PORTABLE SEISMIC PROPERTY ANALYZER Identification of Asphalt Pavement Layers

Publication No. FHWA-CFL/TD-09-002

July 2009

U.S. Department of Transportation

Federal Highway Administration

Central Federal Lands Highway Division 12300 West Dakota Avenue Lakewood, CO 80228

### FOREWORD

The Federal Lands Highway (FLH) of the Federal Highway Administration (FHWA) promotes development and deployment of applied research and technology applicable to solving transportation related issues on Federal Lands. The FLH provides technology delivery, innovative solutions, recommended best practices, and related information and knowledge sharing to Federal agencies, Tribal governments, and other offices within the FHWA.

This study evaluates the Portable Seismic Property Analyzer (PSPA) and its effectiveness in identifying pavement thickness. The results of this technique compare accurately to those from cores, and therefore the PSPA is a viable tool for transportation engineers responsible for pavement design and construction quality control.

F. David Zanetell, P.E., Director of Project Delivery Federal Highway Administration Central Federal Lands Highway Division

### Notice

This document is disseminated under the sponsorship of the U.S. Department of Transportation in the interest of information exchange. The U.S. Government assumes no liability for the use of the information contained in this document. This report does not constitute a standard, specification, or regulation.

The U.S. Government does not endorse products or manufacturers. Trademarks or manufacturers' names appear in this report only because they are considered essential to the objective of the document.

## **Quality Assurance Statement**

The FHWA provides high-quality information to serve Government, industry, and the public in a manner that promotes public understanding. Standards and policies are used to ensure and maximize the quality, objectivity, utility, and integrity of its information. FHWA periodically reviews quality issues and adjusts its programs and processes to ensure continuous quality improvement.

<ul> <li><sup>15.</sup> Supplementary Notes</li> <li>COTR: Matt DeMarco, FHWA CFLHD. Advisory Panel Members: Mike Voth, FHWA-FLH; Khamis Haramy, Michael Peabody, Steve Deppmeier, and Roger Surdahl, FHWA-CFLHD. This project was funded under the FHWA Federal Lands Highway Technology Deployment Initiatives and Partnership Program (TDIPP).</li> <li><sup>16.</sup> Abstract</li> <li>The focus of the study was to evaluate the effectiveness of the Portable Seismic Property Analyzer (PSPA) to rapidly and nondestructively measure thickness and in situ moduli of asphalt pavement layers. These procedures are presented to calibrate and validate the results in the laboratory with simplified seismic tests on extracted cores and determine the design modulus from measured values. Performing these simplified laboratory and field tests along with more traditional tests may result in a database that can be used to smoothly unify the design procedures with pavement evaluation.</li> <li>Specifically, six sites with different pavement conditions and structures throughout Colorado were tested October 2003, and the results summarized in this report. Based on the results, the PSPA is proposed as a viable tool for immediate implementation by the Federal Highway Administration, Federal Lands Highway.</li> </ul>
