ACKNOWLEDGMENTS

The staff of the Governments Division's Recurring Programs Area, headed by **Henry S. Wulf**, is responsible for the preparation of this report. **Stephen Owens, Russell Price, William Kehm,** and **John Kennedy** supervised the data collection and editing activities. **Stephen M. Poyta** and **Donna A. Hirsch** coordinated publication preparation activities. **Robert M. Johnson, Deborah J. Loreto-Domer** and **Jesse Willhide** prepared tables, reviewed data tabulations, and evaluated final publication copy. **John Curry, Kheang Hang,** and **Elizabeth Hovis-Burrows** performed electronic data processing operations.

The staff of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, performed publication planning, editorial review, design, composition, and printing planning and procurement for publications, Internet products, and report forms. **Frances B. Scott** provided publication coordination and editing.

Carma Hogue and **Charles P. Pautler, Jr.**, Chief of the Economic Statistical Methods and Programming Division, supplied advice and assistance in statistical methodologies.

The Census Bureau offers special thanks for the cooperation and assistance of the thousands of state and local government officials in providing information for this report.

For information regarding data in this report, contact the Chief, Governments Division, U.S. Census Bureau, Washington, DC 20233-6800 or phone toll free 1-800-242-2184

Inside back cover

Compendium of Government Finances

A census of governments is taken at 5-year intervals as required by law under Title 13, United States Code, Section 161. This 1997 census, similar to those taken since 1957, covers three major subject fields—government organization, public employment, and government finances.

Volume 4, Government Finances, contains six parts that encompass the entire range of state and local government financial activity in fiscal year 1996-97. They are: No. 1, *Finances of Public School Systems*; No. 2, *Finances of Special District Governments*; No. 3, *Finances of County Governments*; No. 4, *Finances of Municipal and Township Governments*; No. 5, *Compendium of Government Finances*; and No. 6, *Employee-Retirement Systems of State and Local Governments*.

This report, No. 5, provides a comprehensive summary of the census findings on governmental finances for fiscal year 1996-97. It shows data for individual state governments, and local governments by type of government. Separate tables supply aggregations for state areas, county areas, per capita calculations, percentage distributions, and state rankings.

ORGANIZATION OF THIS REPORT

This introductory text describes the scope of the Census Bureau's government finance data collection activities. It also explains the intricacies of the types of data and notes the limitations of the data as well as their relationship to data in other reports.

The report is divided generally into four sections: Tables 1 through 17, 18 through 47, 48 through 51, and 52 through 54. Tables 1 through 17 contain state and local summaries for various financial items. Tables 18 through 47 provide the same financial items, but the summaries are for each state area. In Tables 48 through 51, the concentration is on local government data only for state areas first and then for county areas. Tables 52, 53, and 54 organize the financial items into rank order for analytical purposes.

Table 1 displays state and local government finances for 1996-97 and other census years to provide an historical perspective.

State and local government totals of revenue, expenditure, indebtedness, and financial holdings by type of government appear in Tables 2 through 17. Finances by level and type of government are provided in Table 2 and are related to population and personal income in Table 3. Revenue data appear in Tables 4 through 6 and expenditure

data in Tables 7 through 11. Table 12 includes data on government-operated utilities. Government indebtedness and debt transactions are provided in Tables 13 and 14, cash and security holdings are detailed in Table 15, and governmental insurance trust finances are summarized in Tables 16 and 17.

Statewide aggregates appear in Tables 18 through 47. Revenue data are shown in Tables 18 through 29, including detailed presentations on tax revenue, current charges, and intergovernmental revenue. This revenue section also contains tables displaying percent distributions of revenue by source, per capita revenue, and origin and allocation of state and local government revenue.

Tables 30 through 38 exhibit state area totals for expenditure by character and object, with special displays for capital outlay, and function. These presentations also provide data on per capita expenditure, percent distribution of outlays, and allocations of state and local government direct general expenditure.

More specialized displays are shown for governmentally operated utilities (Table 39), debt transactions and long-term debt by function (Tables 40 and 41), cash and security holdings (Table 42), and insurance trust finances (Tables 43 and 44). The complete summations of the finances in each state area that appear in Table 45 are followed in Tables 46 and 47 by calculations of these same data in terms of per capita and per \$1,000 personal income.

SCOPE

Governmental Units

There were 87,504 governmental units canvassed in the finance phase of the 1997 Census of Governments. In addition to the Federal Government and 50 state governments, there were 87,453 units of local government. Of these 39,044 are general-purpose local governments—3,043 county governments, 19,372 municipal governments, and 16,629 township governments. The remainder, more than one-half of the total number, are limited-purpose local governments, including 13,726 school district governments and 34,683 special district governments.

The following paragraphs summarize the characteristics for each of the five major types of local governments. See the report *Government Organization* (Volume 1, No. 1, 1997 Census of Governments) for further information on governmental structure.

County Governments

Organized county governments are found throughout the Nation except for Connecticut, Rhode Island, the District of Columbia, and limited portions of other states where certain county areas lack a distinct county government. (See Appendix C for a listing of county-type areas without county government.) In Louisiana, the county governments are officially designated as “parish” governments, and in Alaska the “borough” governments resemble county governments in other states. Both are classified as county governments for Census statistics on governments.

Not all geographic areas known as counties have county governments. Where municipal and county governments have been consolidated, or substantially merged, the composite units are classed as municipalities for the Census Bureau reporting of governmental statistics. Moreover, the cities of Baltimore and St. Louis are outside the areas of the adjacent counties of Baltimore and St. Louis, and a similar situation exists among 40 independent cities in Virginia. Since these exceptional areas also include New York City, Philadelphia, and several other of the most populous cities (or composite city-counties) in the Nation, almost 10 percent of the total United States population is not served by a county government.

The number of county governments per state ranges widely. Texas has the highest total at 254 and several states have fewer than 20.

There are 187 county governments, located in 40 states, which serve populations of at least 250,000. These 187 county governments, constituting 6.1 percent of all county governments, account for 54.9 percent of the population served by all county governments in the Nation. The overwhelming majority of county governments (72 percent) each serve fewer than 50,000 persons, and the 700 counties that have fewer than 10,000 inhabitants each serve altogether only 4 million persons.

The average population served by a county government is about 79,100. But Loving County, TX, had only 141 inhabitants in 1996, while Los Angeles County, CA had more than 9 million.

Municipal Governments

As defined for census statistics on governments, municipal governments are political subdivisions within which a municipal corporation has been established to provide general local government for a specific population concentration in a defined area. This includes all active governmental units officially designated as cities, boroughs (except in Alaska), towns (except in the six New England states, Minnesota, New York, and Wisconsin), and villages. In Alaska, the term “borough” corresponds to units classed as county governments. In New England, Minnesota, New York, and Wisconsin, the term “town” refers to an area subdivision which may be legally termed

a municipal corporation and have a similar governmental organization but has no necessary relationship to a concentration of population, and thus corresponds to the term “township” in other states.

The number of municipalities per state ranges widely. Illinois, Texas, and Pennsylvania each has more than 1,000 while at the other extreme are eight states with fewer than 50 municipalities each; Connecticut, Hawaii, Maine, Massachusetts, Nevada, New Hampshire, Rhode Island and Vermont. Six of these eight states are in New England where a town government often provides urban services ordinarily provided by municipalities in other states.

In the United States, nearly 164 million people live in areas with municipal governments, and about 69 million of these municipal residents live in cities of at least 100,000 population. Slightly less than one-half of all municipalities have fewer than 1,000 inhabitants. However, these small municipalities account for only 2.3 percent of the total population served by municipal governments.

Township Governments

Township governments exist to serve inhabitants of areas defined without regard to population concentrations, as distinguished from municipal governments which are created to serve specific population concentrations. The term is applied here to organized governments in 20 states. This category includes government units officially designated as: “towns” in the six New England states, New York, and Wisconsin; some “plantations” in Maine; some “locations” in New Hampshire; and governments called townships in other areas. In Minnesota the terms “town” and “township” are used interchangeably with reference to township governments. Although townships in New Jersey and Pennsylvania are legally termed “municipal corporations,” they have no necessary relation to concentration of population and are thus treated for census purposes as township governments.

Excluded from this category of township governments are unorganized township areas, townships coextensive with cities where the city governments have absorbed the township functions, and townships known to have ceased performing governmental functions. Also excluded are the townships in Iowa, which are classified as subordinate agencies of county governments.

Township governments are restricted to the northeastern and north central states. Only Indiana has township governments covering all its area and population. In six states (Massachusetts, New Hampshire, New Jersey, Pennsylvania, Rhode Island, and Wisconsin), operating townships comprise all territory other than that served by municipalities. The same is true for Maine, except for “unorganized territory” which lacks any local government. Of the remaining 12 township states, there are 10 where this type of government appears only in certain county areas as of early 1997; Illinois, in 85 of the 102 county

areas; Kansas, in 97 of 105; Minnesota, in 85 of 87; Missouri, in 23 of 115; Nebraska, in 28 of 93; North Dakota, in 48 of 53; Pennsylvania, in 66 of 67; South Dakota, in 52 of 66; and Wisconsin, 71 of 72. In New York, town governments exist in each county outside New York City.

All municipal governments in Indiana and some, but not all municipalities in 10 other township states (Connecticut, Illinois, Kansas, Michigan, Minnesota, Missouri, Nebraska, New York, Ohio, and Vermont) operate within territory that is served also by township governments. In the remaining 9 of the 20 township states, there is no geographic overlapping of these 2 kinds of units.

Of the 16,629 township governments in the United States, 8,858 had fewer than 1,000 inhabitants. Only slightly more than 1,100 townships had as many as 10,000 inhabitants.

Special District Governments

Special district governments are independent, limited-purpose local governmental units that exist as separate legal entities with substantial administrative and fiscal independence from general purpose governments. As defined for census purposes, the term “special district government” excludes school district governments, counties, municipalities, and townships.

Special district governments provide specific services that are not being supplied by existing governments. Most perform a single function, but in some instances their enabling legislation allows them to provide several, usually related, types of services. The services provided by these districts range from such basic social needs as hospitals and fire protection to the less conspicuous tasks of mosquito abatement and upkeep of cemeteries.

The Census Bureau classification of special districts covers a wide variety of entities, most of which are officially called districts or authorities. Not all public agencies so termed, however, represent separate governmental units. Many organizations that carry the designation district or authority are by law so closely related to county, municipal, township, or state governments that they are regarded for Census Bureau reporting purposes as subordinate or component agencies of those governments rather than as distinct special district governments.

In order to be classified as a special district government rather than a subordinate agency, an entity must possess three attributes—existence as an organized entity, governmental character, and substantial autonomy. Volume 1, No. 1 *Government Organization* of the 1997 Census of Governments provides an explanation of how these criteria were applied, as well as a summary description in each state of legally authorized special district governments. That report also lists in each state various statutory authorities, commissions, corporations, and other organizations that have certain governmental characteristics but are subject by law to administrative or financial control by

the state or by independent local governments and are, therefore, classified as subordinate agencies of such governments.

As a group, special districts are by far the most rapidly growing type of government, rising to a total of 34,683, an increase of about 3,128 or 9.9 percent since the previous Census of Governments in 1991-92. This growth over the past 5 years—on top of a more than 7 percent rise between 1987 and 1992 and a nearly 5 percent increase from 1982 to 1987—reflects the increased public demand for the provision of specialized services either not offered or not performed on a satisfactory scale by existing governments. Since most special districts perform only one function, or a very limited number of functions, their establishment allows a greater degree of concentrated effort in providing services.

The increasing number of special districts also reflects financial considerations. As new programs are initiated, or new services required, the establishment of special districts may eliminate the need to increase the burden on general purpose governments, which may be unable to meet the fiscal requirements necessary to implement these new programs. Debt and tax limitations are further stimulants to creating special districts for raising both capital construction and operating expenditure funds.

The number of special districts varies considerably among the states and has only a weak relationship with population. The following 11 states, each having more than 1,000 special districts, in total accounted for more than one-half of all special districts:

State	Number of special districts
Illinois	3,068
California	3,010
Texas	2,182
Pennsylvania	1,919
Kansas	1,524
Missouri	1,497
Colorado	1,358
Indiana	1,236
Washington	1,202
Nebraska	1,130
New York	1,126

Four state areas contained fewer than 50 special districts each: Alaska (14), District of Columbia (1), Hawaii (15), and Louisiana (39).

School District Governments and Public School Systems

Of the 15,178 public school systems in the United States, only the 13,726 that are independent school districts are included in the count of governments. The other 1,452 “dependent” public school systems are classified as

agencies of other governments—State, county, municipal, or township—and are not counted as separate governments.

California and Texas, each of which had more than 1,000 school district governments—accounted for 16 percent of all school district governments in the Nation. The number of states having at least 1,000 school district governments decreased from 25 in 1942 to 20 in 1952, 15 in 1962, 4 in 1972, and 2 in 1992.

The total of independent school districts includes some units of government that do not provide elementary-secondary education services. In 21 states, there are 338 school districts that provide for vocational, special, or college grade education only. An additional 206 systems in 18 states pay tuition for resident pupils attending schools operated by another system but do not directly render education services.

Because of the variety of state legislative provisions for the administration and operation of public schools, marked diversity is found in school organization throughout the United States. The number of states providing for public schools solely through independent school districts numbered 31 in 1997. This independent district arrangement, which prevails in most parts of the country, is practically universal in the West.

A “mixed” situation is found in 15 states, with the public schools that provide elementary and secondary education operated in some areas by independent school districts and elsewhere by a county, municipal, township, or state government. In the District of Columbia and in four states (Alaska, Hawaii, Maryland, and North Carolina) there are no independent school districts; all public schools are administered by systems that are agencies of the county, municipal, or state government.

Alaska, Hawaii, Maine, Michigan, New Jersey and Rhode Island have one or more state-dependent public school systems. All public schools in Hawaii are administrated directly as part of the state government, but in Maine the arrangement applies only to one sparsely populated area. Alaska operates 19 state-dependent school systems.

Public school systems operating as dependent agencies of county governments appear mostly in Tennessee, Virginia, and North Carolina, which contain two-thirds of all county-dependent systems. However, California has 59 county-dependent systems and New Jersey 51. Other states containing school systems operating as dependent agencies of county governments are: Alaska (12), Arizona (10), Maryland (40), Massachusetts (3), Mississippi (4), New York (28), and Wisconsin (4). Systems associated with township (or “town”) governments are found only in New England and New Jersey. There are public school systems operated by municipal governments in each of 12 states and the District of Columbia, but in most of these states some other pattern predominates, and only in the District of Columbia are all public schools operated by a municipally dependent system.

GENERAL CONCEPTS

This report uses a number of terms that, in other contexts, might have different meanings. Further, some of the tabular presentations contain concepts that are not commonly used or easily understood. If the following—which is a limited attempt to explain some of these terms and ideas—does not provide sufficient information, please contact the Governments Division, U.S. Census Bureau at 800-242-2184.

Current Dollars

The statistics in this report, as in the others issued by the Census Bureau on state and local government finances, are in terms of current dollar amounts. They have not been adjusted for price and wage changes occurring through the years.

Fiscal Years

Data in this report pertain to government fiscal years that ended between July 1, 1996, and June 30, 1997. The following governments are exceptions, and are included though they were part of the June 30 group: ending September 30, the state governments of Alabama and Michigan, the District of Columbia and Alabama school districts; and ending August 31, the state government of Texas and Texas school districts, Nebraska and Chicago school districts. New York state ends its fiscal year on March 31 and beside those already mentioned, is the only other exception to the June 30 ending for state governments.

Not all agencies of a government necessarily have a fiscal period that coincides with the central organization. Totals for an individual government, in those instances, are the summation of finances for all agencies with a fiscal period ending between July 1, 1996, and June 30, 1997.

Slightly more than one-half of all county governments in the nation had a fiscal year corresponding directly with calendar year 1996—i.e., they ended their fiscal year on December 31, 1996. September and November were other common months in which county governments ended their fiscal years.

Almost three-fourths of all municipal governments in the nation had a fiscal year ending in either December (40 percent) or June (32.8 percent). September and April were the next most common months in which municipal governments ended their fiscal years. Three-fifths of all townships had a fiscal year corresponding directly with calendar year 1996—i.e., they ended their fiscal year on December 31, 1996. March, February, and June had the next most common fiscal year ending dates for townships.

For special district governments there is a wide variety in fiscal year ending dates, with June 30 and December 31 being the most common. There is, however, no predominant pattern. By contrast, for school districts, June 30 predominates overwhelmingly, with the only exceptions being in Alabama, Nebraska, and Texas states, and Chicago city as noted previously.

Composition of Financial Amounts

Revenues and expenditures comprise actual receipts and payments of a government and its agencies (net of correcting transactions and recoveries or refunds), including government-operated enterprises, utilities, and public trust funds. Transactions excluded as revenue or expenditure are: debt issuance and retirement; loans and investments; agency and private trust transactions; and internal transfers between funds of a government. Aggregates for groups of governments exclude intergovernmental transactions between the governments involved.

Government Financial Sectors

Government financial data are presented within broad activity sectors, including general government, utilities, liquor stores, and insurance trust activities. General government includes all government revenue and expenditure except activities defined as utility, liquor stores, and insurance trust transactions. Other commercial-type operations of governments, such as port facilities, airports, toll highways, and housing projects are part of the general government sector. Utilities are water supply, electric power, and gas supply systems, and transit facilities owned and operated by governments or operated under contract by a private firm whenever the government maintains day-to-day financial oversight. Liquor stores comprise dispensaries operated by 17 state governments and by local governments in 5 states. Insurance trust activities consist of publicly funded contributory retirement systems for public employees, and specified government social and life insurance programs, such as unemployment compensation, workers' compensation, and state medical and disability funds.

Revenue Concepts

As noted above, revenue is reported net of recoveries and correcting transactions and excludes amounts from debt issuance, internal transfers, and private trust transactions. The following examples illustrate some applications of this summary definition:

1. Tax revenue is reported in terms of gross collections minus tax refunds during the same period.
2. Receipts from issuance of debt, recoupment of previous loans, and sale of securities are not counted as revenue.
3. Property tax amounts, widely collected by county governments acting as an agent of other governments, are counted as revenue of the final receiving units only.
4. State and local governments act as agents of the Federal Government in withholding Federal income and

Social Security taxes from their employees' pay; such amounts are excluded from state and local government revenue and expenditure.

5. The Federal Treasury handles unemployment compensation accounts for the states and the District of Columbia government; Federal agency transactions in connection with these funds are included with the state and local government data.
6. Figures in this report include the gross transactions of business-type government corporations and agencies.

Taxes consist of compulsory contributions exacted by governments for public purposes. However, this reporting category excludes employer and employee payments for retirement and social insurance purposes (classed as insurance trust revenue) and special assessments, which are classed as nontax general revenue.

Charges and miscellaneous general revenue comprises all nontax revenue of governments from their own sources excluding nongeneral revenues from utilities, liquor stores, and insurance trusts. Most of this revenue is from charges for current services and sale of products in connection with general government activities. Such amounts are designated as current charges and are reported on a gross basis, without offset of the cost of producing or buying the commodities or services sold. Utility service charges are excluded here and reported under utility revenue.

Utility revenue and liquor stores revenue comprise amounts from sales of goods and services by such undertakings.

Insurance trust revenue comprises only: (1) retirement and insurance contributions received from insured individuals and their government employers; and (2) for state and local systems, earnings on investment assets of insurance trust funds.

Employer contributions and other transfers made by the administering governments to their insurance trust funds are treated as intragovernmental transactions rather than government revenue or expenditure. However, to the extent that particular governments make payments as employers to insurance trust systems administered by other governments—for example, local government payments to state administered retirement systems—such amounts are included here without special treatment, in the “revenue from contributions” of the various systems affected. In addition, Federal advances and contributions to state unemployment compensation funds have been included with unemployment compensation revenue.

Expenditure Concepts

The expenditure reporting categories comprise all amounts of money paid out by a government and its agencies, with the exception of amounts for debt retirement,

and for loan, investment, agency, and private trust transactions. Note that expenditures include payments from all sources and funds, including amounts spent from borrowing and from previous period balances, as well as from current revenues. Included in this category are expenditures of business-type government corporations and agencies. Transactions not considered as expenditures include payments for debt retirement, extension of loans, purchase of securities, and payments to the Federal Government of monies withheld for income tax or Social Security (OASDHI) purposes.

The commonly used character and object (or use) categories this finance series employs are: intergovernmental expenditure, current operation, capital outlay, assistance and subsidies, interest on debt, insurance benefits and repayments, and salaries and wages.

Government expenditure for capital outlay is commonly financed by borrowing, but government revenue does not include receipts from borrowing. This, among other things, means that the relationship between totals of revenue and expenditure, as shown in this report, should not be considered a direct measure of the degree of budgetary "balance."

In addition to payments for goods, services, and capital items, total government expenditure includes sizable amounts of payments for which no services or products are directly received in return. A major portion of such payments comprises items reported here as assistance and subsidies. These amounts include only cash grants and not gifts of supplies, materials, or other grants-in-kind. The cost of items to be distributed in-kind is included in current operation expenditure as purchases of goods and services.

Insurance benefit and repayment amounts are limited to actual payments to insured persons and beneficiaries and, therefore, exclude as internal transfers contributions by governments to insurance trust funds they administer, and costs of administering insurance trust programs (which are classified as general expenditure).

Payments for salaries and wages consist of gross amounts paid to government employees before deductions for income tax, retirement contributions, charges for quarters or subsistence, or other purposes. They comprise only cash payments and exclude the value of subsistence, quarters, or other payments in-kind made to other public employees. Salaries and wages are mainly for current operation but also include some amounts for force-account construction.

Detailed statistics on civilian public employment and payrolls as of March 1997 appear in the 1997 Census of Governments, Volume 3, No. 1, *Employment of Major Local Governments*, and No. 2, *Compendium of Public Employment*. The primary difference between the finance and employment information is that the information in this volume is for an annual period while the data in Volume 3 are for 1 month.

In presenting expenditures by function, this report attempts to show a more comprehensive picture by grouping related activities into broader classifications. For example, social services and income maintenance includes public welfare, hospitals, health, social insurance administration, and veterans' services. Transportation includes highways, airports, parking facilities, and water transport and terminals. The report does not provide totals for these larger categories because they are meant only as presentational guidelines and, except in a few instances, have no data precedents.

Expenditures for specific functions do not include any amounts for debt service costs. Interest payments on debt are not classified under particular functions for which debt may have been incurred, but rather are shown in the single interest category.

Note that the functions cannot be equated specifically with one Federal or state government program. Medicaid, for example, is included in the larger public welfare function. Instead the functional categories represent broader activities of government that have remained virtually unchanged over many years so that as specific programs expand and contract they will remain useful for analytical purposes.

Further, these functions have utility beyond the limits of this specific report or other Volume 4 publications on government finances. Other phases of the Census of Governments, including the organization and employment, use these same functions, making cross-analysis feasible.

Understanding the specific functional categories requires close attention to the definitions in Appendix A. The following discussion supplements, but does not supplant, that basic information.

Education— The education function, perhaps more than any other, emphasizes the intergovernmental flow of funds. Besides the direct expenditures made at the state and local government level, there are large intergovernmental education transfers that include: direct Federal grants-in-aid to schools as provided under the various "title" programs; state "foundation" aid; Federal aid channeled through the state government to local schools; and interlocal payments for education services.

Elementary and secondary expenditure for education includes all expenditures of school systems other than for interest (reported under interest on general debt), duplicative intergovernmental payments, and retirement benefits paid to former education employees (reported under employee-retirement expenditure). It thus includes gross school system expenditure for the school lunch program and other cafeteria operations as well as school health, recreation, and library services administered by school systems.

Higher education pertains to publicly operated universities, colleges, junior colleges, and other schools beyond the high school level. Expenditures shown under this

heading includes gross payments for auxiliary activities, such as dormitories, dining halls, and bookstores operated by public institutions of higher education. However, expenditure of such institutions for hospitals serving the public and for agricultural experiment stations and extension services is reported under hospitals and natural resources, respectively.

Public Welfare— This activity includes institutional and noninstitutional assistance to the needy, plus the administration of such assistance. The degree to which states assume direct responsibility for public welfare services or delegate this to local governments varies. There is a significant Federal participation in this activity, primarily the financing of public welfare services by other governments. State and local expenditures include any applicable cash benefits in excess of, or supplementary to, those finances with Federal monies.

Categorical cash assistance payments to state governments and the District of Columbia in this report include mainly maintenance assistance under the Federal program, “Aid to Families with Dependent Children, Maintenance Assistance—State Aid (AFDC).” All states participate in AFDC and the matching requirements vary from about one-fifth to one-half of the Federal payments.

The Federal Government administers directly those categorical welfare assistance programs for old age assistance, aid to the blind, and aid to the disabled that are now incorporated into the Supplemental Security Income program. State and local government cash benefits supplementing these direct Federal welfare outlays are relatively small, occurring in only a few states.

General relief, which is wholly financed from state and local sources, makes up most of other cash assistance. Other public welfare spending includes: vendor payments under various public welfare programs, including the federally supported medical care program commonly known as Medicaid; institutional care for the needy; and administration of welfare activities.

Hospitals— Expenditures for hospital facilities directly operated by state and local governments and payments to private medical facilities belong here. Medical vendor payments provide some variation in classification; private purveyor payments made under welfare programs are classed as public welfare, but any services provided directly by a government through its hospital agency are included under this heading.

Transportation— Highways include provision and maintenance of highway facilities, including toll turnpikes, bridges, tunnels, and ferries, as well as regular roads, highways, and city streets. These figures exclude interest on debt issued for highway purposes (included in interest on general debt) and highway policing costs (classified under police protection). Most state funds in this function

go for regular highway facilities with the remainder for toll roads and bridges, which are generally administered by semiautonomous agencies of the state governments.

Natural Resources— Natural resources include expenditures for conservation and development of agricultural, forest, fish and game, mineral, and similar resources.

For state and local governments, natural resources covers activities pertaining to agriculture including extension services and experiment stations, soil conservation, flood control, irrigation, and drainage. However, water supply, electric utilities, and hydroelectric power activities are reported under utilities.

Police Protection— Local government payments for police and traffic safety activities amount to the most significant part of police protection. State expenditure is mainly for highway police activities.

Indebtedness

State and local government long-term debt includes general obligation bonds, guaranteed by the taxing power of the governments, as well as nonguaranteed indebtedness that pledges only some nontax source—rents, charges, or tolls for example—related to the bond purpose as credit. Governments have become very active in providing financial assistance to private and nonprofit organizations through the issuance of tax exempt bonds. This financial intermediation by state and local governments covers a variety of activities including industrial development aid, assistance to commercial and retail developers, single-family and multifamily housing development, hospital and health care facilities, and pollution abatement plant and equipment expenditures.

A significant classification change in the reporting of statistics on indebtedness took place effective with the 1978-79 Annual Survey of Government Finances. Prior to that time both original issues and related advance refunding issues were included as debt outstanding of the government. Amounts reported for debt outstanding, debt retired, and debt offsets now reflect the “redemption” of original issues of bonds when no longer carried in the official accounts of governments.

The calculation of the change in total debt shown in some tables requires information not published separately in this report. It is, however, available in detailed records from the Census Bureau.

Utilities and Liquor Stores

Utility expenditure and liquor stores expenditure comprise all spending involved in provision and conduct of such undertakings—i.e., acquisition of facilities, current operation (including the purchase of goods and services for resale), and interest on utility debt.

State and local government utility revenue means only charges received for services. Other revenues received by

utilities—for example, interest earnings—are counted as general revenues of a government (see definitions in Appendix A).

Liquor stores are operated by certain municipalities in states (Minnesota, North Carolina, South Dakota, and Wisconsin), counties in 2 states (Maryland and North Carolina), and by 17 state governments. Amounts reported in this financial category do not include revenue from state or local taxes which are collected through liquor monopoly systems, nor distinguishable expenditure for licensing and law enforcement activities in connection with these systems. Such amounts are treated as general revenue and general expenditure, respectively.

Insurance Trusts

Every state and the District of Columbia operates a system of unemployment insurance and one or more public employee-retirement systems. Most of the states also administer workers' compensation systems, and a few have other social insurance systems involving the payment of cash benefits from accumulated fund reserves. Among local governments, the primary financial activity in insurance trusts relates to publicly administered employee-retirement systems. Social Security (OASDHI) dominates the Federal insurance trust area.

Transactions of these various systems—exclusive of administrative cost (treated as general expenditure) and of government contributions (classified as intragovernmental transactions)—are reported as insurance trust revenue and insurance trust expenditure. Only insurance benefits and repayments of contributions from insurance funds comprise insurance trust expenditure.

The coverage in a number of state-administered employee retirement systems includes local government employees exclusively or in combination with state employees. The local government contributions to state systems to pay the local employee portion are included under insurance trust revenue of the state government and as direct expenditure of the local government. Although there is a flow of funds from one government to another, the census classification system does not count this as intergovernmental revenue because intergovernmental revenues are general revenues by definition. See the Governments Division, Census Bureau Internet site—www.census.gov/govs/www/retire.html—Employee Retirement Systems of State and Local Governments for additional specific information about employee-retirement systems.

Lotteries

There were 37 states and the District of Columbia with government lotteries in operation during fiscal year 1996-97. This was an increase from the 34 state and local government lotteries in operation in fiscal year 1991-1992. In this report, the amounts available for distribution from lottery proceeds to various government funds are included

in the miscellaneous revenue total. Please refer to 1997 State Government Finances (Governments Division, Census Bureau Internet site - www.census.gov/govs/www/state.html) for detailed information on the income and apportionment of funds in individual lottery systems.

Intragovernmental and Intergovernmental Transactions

Intragovernmental flows— Census statistics ignore government fund structure to achieve comparability. Since the data for each individual government represent a consolidation of amounts for its various funds, payments between funds have been eliminated. Thus, for example, a government's employer contribution to a retirement fund it administers is not counted as expenditure, nor is the receipt of this contribution by the retirement fund considered as revenue. For census purposes, only the retirement benefits are classified as a government expenditure—insurance trust expenditure in this example.

State and local governments pay some interest on debt that is held as investment securities by insurance funds they administer. However, because of difficulty in identifying such transactions, this interest is counted as revenue in contravention of the rule about payments between funds.

Intergovernmental flows— Funds flowing between governments (subject to limited exceptions, mentioned below) are treated distinctively as intergovernmental revenue and intergovernmental expenditure. Mainly they represent grants-in-aid and the sharing of tax proceeds, but also include payments in lieu of taxes and amounts for services performed by one government for another on a reimbursable or cost-sharing basis.

Total revenue and total expenditure for an individual government, of course, include any intergovernmental amounts. When measuring groups of governments—a state area, a county area, a type of local government—monies going from one government to another must be netted out to arrive at nonduplicative totals. These aggregations treat each government as if it were a "fund" under the intragovernmental flows described above. For example, the aggregate amounts for all local governments within the Maricopa (AZ) county area, shown in Table 50, exclude any financial transactions between Phoenix and other local governments in the Maricopa county area. Similarly in Table 45, providing state area totals by level of government, the local government data exclude transactions between Phoenix and any other local government, and the state area totals exclude both the interlocal and state-local financial exchanges.

The value of intergovernmental aid "in-kind" such as commodities distributed by the Federal Government for school lunch purposes, is not treated as an intergovernmental revenue or expenditure. Furthermore, there are

some kinds of transactions between governments that have not been isolated for special treatment here as intergovernmental in nature:

1. In situations where a government-administered employee retirement system covers the employees of a second government, contributions by the latter are included, without distinction, as part of the current operation expenditure of the donor government and as insurance trust revenue of the donee government.
2. No attempt at special treatment has been applied to interest on outstanding debt that is paid to other governments holding the securities involved.
3. No special handling has been attempted for transactions where governments deal as ordinary suppliers and customers; e.g., in purchasing property utility services, or supplies from one another. Under this method, where one government buys water or electricity from a second, the entire transaction is classified as utility with no intergovernmental component.

INTERCOUNTY LOCAL GOVERNMENTS

Most local governments in the United States operate entirely within a single county area, but there are some units whose territory extends into two or more county areas. Each of these intercounty governments is counted only once in this report and has been assigned for purposes of enumeration to the county area where its headquarters is located, or in the case of municipal governments, to the county area having the largest share of its population.

Knowledge about intercounty governments and the assignment of data is very important in making interarea comparisons from Tables 50 and 51. For example, the Washington Metropolitan Area Transit Authority (WMATA) is a special district government operating in eight county areas in the proximity of Washington, DC. Its revenue, expenditure, debt outstanding, and fund balances are assigned to the District of Columbia area, site of its principal offices. The Washington, DC per capita data in Table 51, therefore, are increased in their revenue, expenditure, and debt outstanding totals by \$1,829, \$1,783, and \$531, respectively. In fact, however, a portion of these data belongs in the seven other county areas served by this special district.

Though the Census Bureau acknowledges the advisability of allocating these intercounty governments, we have made no attempt to do this because there was no standard criterion or methodology available that could be applied practically in the majority of cases. The listings in Appendices F and G provide some details in those cases where there might be the most severe data dislocations. Further information regarding intercounty governments may be requested from the Governments Division, U.S. Census Bureau, Washington, DC 20233 or 800-242-2184

COUNTY AREA DATA

All county area information pertains only to local government data—that is counties, municipalities, townships, special districts, and school districts. Tables 49 through 51 provide information about county areas. Table 49 summarizes the county area information by population-size groups of county areas within states and shows additional percent distribution and per capita calculations, individual local government county area data are presented in Table 50, and the corresponding per capita figures are in Table 51.

When comparing county areas, remember that the data are unadjusted for any differences in cost of living. Further, these data can be influenced heavily by the presence of intercounty governments, large amounts of debt issued for capital projects, and unique local circumstances such as difficult geography or very small populations.

RELATION TO OTHER CENSUS REPORTS

Numbers 1, 2, 3, and 4 in Volume 4 of the 1997 Census of Governments supply detailed information on the finances of school systems, special districts, county governments, municipalities, and townships. Except in a very few instances, where limited revisions may have applied, amounts appearing in those reports agree with corresponding items shown here. Note, however, that expenditure amounts shown in this report sometimes pertain to direct expenditure, excluding intergovernmental amounts. Related presentations in separate reports deal with expenditure in total, including any applicable intergovernmental amounts for particular functions.

RELATION TO NATIONAL INCOME STATISTICS

Figures on state and local government “receipts” and “expenditures” which appear in the national income and product statistics issued by the U.S. Department of Commerce, Bureau of Economic Analysis, are based primarily on Census Bureau data on “revenue” and “expenditure.” However, there are differences in the totals and some of the components of the two sets of statistics owing to differences in concepts and timing. The principal areas of differences are:

1. Census statistics on government finances include, on a gross basis, revenue from sales and charges of publicly operated utilities, liquor stores, toll facilities, and the like, and all expenditures of these undertakings. In the national income accounts, such commercial-type government activities are treated, in effect, as a part of the business sector of the economy. Accordingly, their charge revenue is excluded from “government receipts” and is applied as an offset to current government expenditures.
2. Census statistics on revenue and expenditure, respectively, include interest received on investments and

interest paid on debt by state and local governments. In national income accounts, interest received is deducted from interest paid and only the net interest paid is included in government expenditures.

3. In census statistics, revenues and benefit payments of unemployment compensation systems are classed as insurance trust amounts of state and local governments, while in national income accounts they are treated in the Federal Government sector.
4. Census figures include as revenue amounts from sale of real property, and as expenditure capital outlay amounts for purchase of land and existing structures. In national income accounts, such amounts are excluded.
5. In census data, employer contributions by state and local governments to self-administered employee-retirement systems are classed as intragovernmental transactions and excluded from revenue and expenditure totals. In national income accounts, however, such "government contributions to self-administered social insurance funds" are included in revenue and also in expenditure as supplements to wage and salary payments.

SOURCES OF DATA

State Government Finances

The statistics on state government finances shown in this report are based primarily on the 1997 Annual Survey of State Finances. Findings from that survey appear on the Governments Division, Census Bureau Internet site (www.census.gov/govs/www/state.html).

Trained representatives of the U.S. Census Bureau compiled figures in detail from official records and reports of the various states for most of the state financial data. Data for tax revenue, some debt figures, and the finances of state administered retirement and miscellaneous insurance trust systems came from mail canvasses. As with local school systems, the Integrated Postsecondary Education Data Survey, conducted by the National Center for Education Statistics in agreement with the Census Bureau, was the main source of state college and university data. The figures assembled by these various efforts were classified according to standard Census Bureau categories. Because of the collection methods and their relative importance, the state financial data received an intensive review.

Data on the finances of unemployment compensation systems were obtained from the Employment and Training Administration of the U.S. Department of Labor.

Local Government Finances

General-purpose governments. This survey assembled information for all of the 3,043 county, 19,372 municipal,

and 16,629 township governments which were in existence in fiscal 1996-97. The initial data collection phase used three methods to obtain data: mail canvass, field compilation, and centralized collection from state sources.

The mail canvass involved the use of detailed census schedules with related reporting instructions. Census examiners reviewed the mail reports intensively and used extensive correspondence to supplement and verify incomplete and questionable information. In significant cases, where returns of acceptable data could not be obtained by mail canvass or from available published sources, census enumerators visited local government offices to obtain the basic statistics or important missing information.

There were two aspects of field compilations. Initial plans entailed the use of trained census representatives to compile data for the largest and most important county and municipal governments—generally those counties with a population of 1,000,000 or more and municipalities with a population of 500,000 or more. A considerable portion of this work required on-site access to records. The second part of field compilation was an attempt to resolve important questions that arose during the course of the survey by having the trained agents review source material in the local government offices.

A central data collection system existed for county, municipal, or township governments in the following states:

COUNTIES

Alaska	Kentucky	New York
Arizona	Maryland	North Carolina
Arkansas	Massachusetts	North Dakota
California	Michigan	Oklahoma
Florida	Minnesota	Pennsylvania
Georgia	Missouri	Rhode Island
Idaho	Montana	South Carolina
Illinois	Nebraska	Utah
Indiana	Nevada	West Virginia
Iowa	New Hampshire	Wisconsin
Kansas	New Mexico	Wyoming

MUNICIPALITIES

Alaska	Maryland	North Dakota
Arizona	Massachusetts	Oklahoma
California	Michigan	Pennsylvania
Florida	Minnesota	South Carolina
Georgia	Missouri	Utah
Idaho	Montana	Washington
Illinois	Nebraska	West Virginia
Indiana	Nevada	Wisconsin
Iowa	New Hampshire	Wyoming
Kansas	New York	Wyoming
Kentucky	North Carolina	

TOWNSHIPS

Illinois	Minnesota	New York
Indiana	Missouri	North Dakota
Kansas	Nebraska	Pennsylvania
Massachusetts	New Hampshire	Rhode Island
Michigan	New Jersey	Wisconsin

The methodology used in each instance and the extent of the available data varied widely. As with mail canvass questionnaires, the basic financial data sometimes needed supplementation for such items as debt, assets, particular functional expenditures, or revenue items. Census staff obtained these supplementary data from special tabulations in other state offices, printed reports, secondary sources, or supplemental mailings directly to the local governments.

School systems and education data. The education portion of the 1997 census obtained data for all of the 13,726 independent school districts and 1,452 dependent school systems that were in existence in fiscal 1996-97. The research conducted as part of the 1997 census organization phase identified the universe of public school systems.¹

The education data came from four sources:

1. **Field Compilation.** For some of the largest county and municipal governments, trained census representatives compiled education data from official documents on-site as part of a general compilation of financial data. This applied only to education data for municipal governments with a population of 500,000 or more and county governments with a population of 1,000,000 or more.
2. **Higher Education.** Through an agreement with the National Center for Education Statistics, the Census Bureau obtained financial data for higher education institutions from the Integrated Postsecondary Education Data System (IPEDS). From this joint survey, the census data were constructed using the IPEDS forms F-1 and F-3.
3. **Mail Canvass.** Statistics for elementary and secondary school systems in Alaska and the District of Columbia were based on information received in response to a mail canvass of individual systems. In addition, supplementary data on asset information were derived from mailed requests.
4. **Central Collection.** State education agencies conduct surveys of elementary and secondary education systems that obtain finance data as part of a larger data collection effort. A high percentage of this information

is compatible with Census Bureau categories. In an effort to reduce respondent burden, the Census Bureau concluded a series of unique agreements with all states, except Alaska, to share their data for this survey.

These central collection arrangements did not always provide sufficient information to meet all the needs of the Census Bureau survey. In those instances, other sources—most often different state offices—supplied information to supplement the basic data. There were four types of data that regularly needed this type of supplementation: school lunch finances, indebtedness, cash and security holdings, and capital fund transactions.

The procedures for incorporating these additional data with the core information required careful planning to avoid duplication or under-reporting.

Special district governments. This census survey attempted to assemble information for all of the special district governments which were in existence in fiscal 1996-97. The initial collection phase used two methods to obtain data: mail canvass and centralized collection from state sources. Mail questionnaires went directly to 25,740 special district governments. The balance of the special district data was sought from cooperative Census Bureau and state arrangements in seven states.

The mail canvass involved the use of detailed census schedules with related reporting instructions. Census examiners reviewed the mail reports intensively and used extensive correspondence to supplement and verify incomplete and questionable information. In significant cases, where returns of acceptable data could not be obtained by mail canvass or from available published sources, census enumerators visited local government offices to obtain the basic statistics or important missing information.

A central data collection system for special district governments was used to obtain data in seven states: California, Florida, Idaho, Illinois, New York, Utah, and Wyoming. As with mail canvass questionnaires, census personnel examined these centrally collected data thoroughly and verified data either with state officials or directly with local respondents. The following describes what each state central source supplied:

California—supplied data for 2,931 special districts. That was all special district governments except for 79 in the housing and community development function that received a mail canvass questionnaire.

Florida—provided data for all 526 special districts.

Idaho—provided data for all 789 special districts.

Illinois—provided data for 2,923 special districts (145 mail canvass).

¹See the report *Finances of Public Education Finances* (Volume 4, No. 1, 1997 Census of Governments) for a more detailed explanation of this central collection methodology.

New York—supplied data for 912 special districts, all fire protection functions. The remaining New York special districts were canvassed by mail.

Utah—supplied data for all 384 special districts.

Wyoming—supplied data for all 478 special districts.

LIMITATIONS OF DATA

Although the data in a census are not subject to sampling error, the data are subject to various nonsampling errors. For this census, these errors may include response errors, errors caused by nonresponse, and processing errors. Every effort is made to keep these errors at a minimum.

All schedules-mail canvass, those compiled by Census-trained enumerators from official sources, field enumerated, and centrally collected—were examined for evidence of completeness, internal consistency, and a reasonable relation to figures reported for earlier periods. In addition to the manual review, a computerized edit checked for impossible or improbable entries and identified in detail the differences with prior data.

These procedures applied to the 1997 Census of Governments were designed to achieve, for the data reported here, a high standard of completeness and accuracy. Undoubtedly, however, some mistakes and inconsistencies of official reporting, or of Census Bureau handling of particular items, have escaped detection. Please inform the Governments Division, U.S. Census Bureau, if the tables or data reveal potential problems.

After using the extensive followup efforts detailed in the data collection section, only a minor percentage of the data file—representing nearly all small county, municipal or township governments—remained incomplete. Only nine percent of counties, and fifteen percent of the municipalities and townships were total nonrespondents to the census. Imputations were done for these missing data.

For counties, municipalities and townships that failed to respond, missing data were imputed by using the most recently reported prior year census or annual survey data. These data were adjusted by growth rates calculated from similar types of governments, i.e., in the same state, type, and about the same size. The average growth rates for the reporting governments were calculated for each group. The appropriate average growth rate was applied to the nonreporting government's prior year data to get a current year imputed value. For governments that failed to report in the prior census or subsequent annual surveys, a responding county, municipality or township from the same group as the nonrespondent was randomly selected and per capita values for the respondent were multiplied by the population of the nonrespondent to get imputed values for the nonrespondent.

For special districts, because of an initial lower response to the mail canvass than for general purpose governments, the special district government portion of the 1997 Census of Governments employed secondary sources and followups more extensively. These efforts included using: 1996 fiscal year data if they were available; summary financial data obtained during the organization phase of the 1997 Census of Governments; the American Hospital Association; Moody's Investors Services; and various state agencies and departments.

All imputations for special districts were done within a function code, i.e., fire protection districts were not mixed with library districts, etc. For units that responded in 1992 but not in 1997, median growth rates (calculated from similar units who responded in both 1992 and 1997) were applied to the nonrespondents' 1992 data to generate 1997 data. If the 1997 nonresponding special district had no 1992 data available, a random hot-deck method was applied. Since most of the large special districts responded to the survey, these units were left out of the 1997 respondent donor pool. Only 1997 special districts with revenue or expenditure less than \$5 million and debt less than \$15 million were included in the pool. Only units with the same function code were included in the donor pool for the nonrespondents of that function code. In other words, only small respondent library districts were used as donors for small nonrespondent library districts. Because of extreme volatility of the data for gas supply utilities, electric power utilities, water transportation districts, and hospital districts, prior year data were not used for imputations. The hot-deck method was used to impute data for these units.

Population Data

The 1997 Census Bureau population estimates provided all population data used in this report both as an exhibit and in calculating per capita amounts in summary tables. The 1996 population data were used for county-area tables 49 to 51. The population in this Census of Governments volume may vary somewhat from published reports in the population series because those documents exclude some data file corrections that were processed after their reports were printed.

Individuals desiring more detailed information about the precise application of this methodology should contact the Governments Division, U.S. Census Bureau.

Review Procedures

All schedules—mail canvass, those compiled by Census-trained enumerators from official sources, field enumerated, and centrally collected—were examined for evidence of completeness, internal consistency, and a reasonable relation to figures reported for earlier periods. In addition to the manual review, a computerized edit checked for impossible or improbable entries and identified in detail the differences with prior data.

These procedures applied to the 1997 Census of Governments were designed to achieve, for the data reported here, a high standard of completeness and accuracy. Undoubtedly, however, some mistakes and inconsistencies of official reporting, or of Census Bureau handling of particular items, have escaped detection. Please inform the Governments Division, U.S. Census Bureau, if the tables or data reveal potential problems.

Derivative Statistics

This report shows computations that use financial data in combination with population or personal income. These statistics on "per capita" or "per \$1,000 of personal income" make excellent tools for comparative analysis, especially for state area or county area statistics. Before initiating this type of study, however, refer to the portions of this text that focus on some of the difficulties inherent in this type of comparability study—for example, the existence of multicounty governments or the allocation of government responsibility.

The calculations themselves use 1997 population data (1996 in tables 49 to 51), and calendar year 1997 personal income data from the U.S. Department of Commerce, Survey of Current Business (August 1998). Appendix E contains a state listing of this information. In doing the arithmetic computations for per capita data, all original finance amounts were rounded to the nearest thousand and populations were in whole numbers. For the personal income calculations, finance amounts were rounded to the nearest thousand and income amounts were rounded to the nearest million.

Statistical Nature of Data

Finance amounts presented in this publication are statistical in nature and do not represent an accounting statement. Therefore, a difference between an individual government's total revenues and expenditures does not necessarily indicate a "budget" surplus or deficit. Large capital outlay expenditures, debt issuance or retirement, changes in cash and security holdings, or the existence of a retirement system are all factors that might have an important influence on the balance between revenues and expenditures.

Interarea Comparisons

Use caution in attempting to draw conclusions from direct interstate or intergovernmental comparisons of financial amounts. Such comparisons should take into account the diversity of responsibilities for various functions among different governments. Some state governments, for example, directly administer certain activities which elsewhere are undertaken by local governments, with or without state fiscal aid.

Even within individual states, one may observe marked diversity in the scope of functions performed by individual governments or governments of a particular type. It is not

unusual, for example, for one or a few large county governments to provide services that are normally handled by municipalities. As an example, showing a different perspective, there are certain sizable "contract cities" in California that operate mainly through county agencies rather than by direct employment of personnel for the entire range of common city functions.

Some individual governments reported here as municipalities operate in effect as composite city-county units. See Appendix B for a listing of the largest of these city-county governments classed as municipalities.

One variable that affects the scope and scale of government finances significantly is the placement of responsibility for administration of local public schools. In most states, this function is assigned to independent school districts. In many instances, however, including several of the largest cities, the school system is part of the municipal, county, or township governments. Of similar nature are differences in state versus city, county or township administration of public assistance programs, or of public hospital facilities and services.

Similarly, certain potential limitations should be recognized with regard to direct interarea comparisons based upon the local government aggregates for individual county areas in Tables 50 and 51. These data represent a summation of amounts for all local governments located entirely or mainly within each particular county. Refer to the previous discussion on intercounty governments for an explanation of how data for these units were assigned. Appendices F and G provide a listing of the largest intercounty municipalities and special districts.

Beyond this, the residents of a particular governmental jurisdiction or even an entire county might not be the only beneficiaries of local government operations in the area. One might find, for example, that a scattered minority of individual county areas exhibit a relatively high level of expenditure for health and hospitals. This phenomenon, which occurs most frequently in sparsely populated states, is due to arrangements by which public hospitals in one county actually serve a group of counties. Another circumstance occurring with increasing frequency in urban areas is the establishment of solid waste processing facilities, operated by a single county or municipality but providing service to a wide area.

Relation to Historic Data

In general, the statistics presented here closely parallel in concepts, coverage, and classification the data in corresponding reports (Vol. 4, No. 5) in other quinquennial canvasses. Financial statistics for the Federal Government were not included in the 1997 report. For a detailed comparative analysis, however, take into account changes such as legal shifts in responsibility for certain activities

and economic fluctuations. An especially important factor to consider is the recent rapid growth of special districts:

Census year	Number of special districts
1962	18,323
1967	21,264
1972	23,885
1977	25,962
1982	28,078
1987	29,427
1992	31,555
1997	34,683

AVAILABILITY OF DATA

Copies of Volume 4. No. 5. *Compendium of Government Finances*, and other reports of the 1997 Census of Governments are available from the Customer Services Center, Marketing Services Office, U.S. Census Bureau, Department of Commerce (301-457-4100). This report will also be available in electronic form at www.census.gov/prod/www/abs/govern.html. For details, contact the Governments Division, U.S. Census Bureau, Washington, DC 20233, or telephone 800-242-2184

MEANING OF SYMBOLS

The symbols in the tables have the following meanings:

- Represents zero or rounds to zero.
- (NA) Not available.
- (X) Not applicable.

Table 1. Summary of State and Local Government Finances: 1981-82 to 1996-97
