

Drugs That Fight HIV

Several different kinds of antiretroviral drugs are currently used to treat HIV infection.

- These medicines do not cure HIV infection or AIDS
- These medicines do not eliminate the risk of passing HIV to others
- HIV medicines must be taken in combination with other HIV medicines
- Not all medicines are right for all people, and treatments may be different for each person; talk with your doctor or other health care provider if you have questions about your treatment

NOTE: Many of these medications pictured may also be available in a generic form, but the generic forms are not pictured here. Tablets and capsules pictured are not actual size.
