Bureau of Justice Statistics Bulletin

Tracking Offenders, 1988

By Jacob Perez, Ph.D.
BJS Statistician

Fourteen States provided data describing the processing and disposition during 1988 of felony arrests that arose from 648,463 incidents. Eight States reported on the entire criminal justice process beginning at arrest. Of the more than 584,450 persons arrested in these 8 States, 81% were prosecuted, 59% were convicted of a felony or misdemeanor, and 39% received a sentence to a State prison or a local jail. These findings are from data voluntarily submitted to the Offender-Based Transaction Statistics (OBTS) program of the Bureau of Justice Statistics.

OBTS collects data from States on the criminal justice processing of persons arrested for a felony. In 1988 the participating States — which accounted for more than 36% of the resident population of the United States — were Alabama, Alaska, California, Delaware, Kentucky, Minnesota, Missouri, Nebraska, New York, Oregon, Pennsylvania, Utah, Vermont, and Virginia.

Other findings from an analysis of these felony arrests include the following:

- Of the 536,708 prosecutions reported by OBTS States in 1988, almost 1 in 4 resulted in a court dismissal, and slightly less than 3 in 4 ended with a conviction. One percent of the prosecutions resulted in acquittal, and 5% resulted in other non-convictional dispositions.

Fourteen States participating in the Offender-Based Transaction Statistics (OBTS) program voluntarily submitted criminal justice processing data for this report. The data cover those felony arrests that had a final disposition in 1988.

OBTS provides a valuable vantage point on the criminal justice process. It is based on the individual arrested for a felony. Only this type of information at this level of detail permits a comprehensive examination of the outcomes of arrest, prosecution, and conviction.

- More than 6 in 10 of those convicted received a sentence to a State prison or local jail. Among those convicted of homicide, 88% were sentenced to incarceration; among those convicted of rape or robbery, 79%; and among those convicted of burglary, 78%.
- Most persons arrested for all types of felonies were male (86%), white (61%), and under age 30 (61%). Whites and blacks comprised nearly equal percentages of accused violent offenders.

Introduction to OBTS

This report is based on OBTS data received from 14 States and covers felony arrest cases that terminated in calendar year 1988. State criminal records repositories sent reports for persons arrested for one or more felonies with a final disposition in 1988. Each report had a readable finger-

June 1991

As many who are knowledgeable about criminal justice issues have observed, an appropriate response to crime and criminals requires an understanding of each stage of the criminal justice process,

We appreciate the ongoing support that the State criminal records repositories afford OBTS. Only through their cooperation and assistance have we been able to develop and expand this program over the past 10 years.

Steven D. Dillingham, Ph.D.
Director

print identification. The offenses may actually have occurred in earlier years; 67% of the 648,463 incidents disposed of in 1988 occurred in that year, 27% occurred in 1987, and 5% occurred prior to 1987.

An OBTS record distinguishes among arrestees, incidents, and charges. The arrestee is identified through fingerprints and is assigned an identification number which can be linked to earlier records. The incident number identifies each incident so that records in multiple-charge cases can be condensed. In the latter situation, the program collects the most serious arrest charge as well as the most serious disposition by the police, prosecutor, grand jury, or court, depending on the circumstances of the particular case. (Each State uses its statutes or other rankings to determine the relative seriousness of offenses.) Sentencing information is also collected for the conviction on the most serious charge.

Dispositions of felony arrests

Data from Alaska, California, Kentucky, Minnesota, Missouri, New York, Oregon, and Pennsylvania indicate that for every 100 persons arrested for a felony, 81 were prosecuted, 59 were convicted, 39 received sentences to incarceration, and 10 were committed to a State prison, usually for more than a year (table 1). Alabama, Delaware, Nebraska, Utah, Vermont, and Virginia provide data that begin after the decision has been made to prosecute.

Compared to persons arrested for violent, property, or drug felonies in the eight States, those arrested for public-order offenses had the highest subsequent prosecution and conviction rates. (Public-order offenses include such crimes as driving while intoxicated and obstruction of justice. See Appendix for further information.) Eighty-four percent of persons arrested for public-order offenses were prosecuted; 66% were convicted of some offense, though not necessarily a felony or a public-order offense. Compared to persons arrested for other types of felonies, a smaller percentage of those arrested

for public-order felonies received a prison sentence (5%) or a sentence to either jail or prison (30%).

For individuals arrested for property felonies, prosecution rates (82%) and conviction rates (62%) were higher than among violent or drug felony arrestees. However, sentences to prison (9%) were less likely among property arrestees than among drug arrestees (12%) or those arrested for violent crimes (12%). Those charged with drug felonies at arrest were the most likely of all persons arrested for felonies to receive a sentence to incarceration in jail or prison (47%). About a fifth of the arrests for violent crimes such as rape or robbery were likely to result in confinement in a State prison, but the likelihood of prison in the case of homicide was 1 in every 2 arrests.

For the 18 specific types of crimes examined, persons charged with homicide were the most likely to be prosecuted (90%) (table 2). Other persons arrested for a felony with a high likelihood of prosecution included those charged with other sexual assault and larceny (88%), burglary (87%), and arson (86%).

Adjudication

The OBTS program captures information on the most serious charge and the most serious consequence for the arrestee at each decision point in the criminal justice

Table 2. Likelihood of being prosecuted after a felony arrest in 8 States, 1988

Most serious arrest offense	Percent of arrested persons who were prosecuted

--Less than 0.5%.

process. A basic program requirement is that the arrestee must have been originally charged with a felony, an offense that may be punishable by imprisonment for more than 1 year. However, OBTS data reveal that more than a quarter of the felony charges at arrest were downgraded by prosecutors or the courts to misdemeanors or mere violations of local ordinances:

Disposition offense type	Among persons arrested for a felony, percent of court dispositions
Total	100.0%
Felony	70.2
Misdemeanor	23.3
Local ordinance	6.6

This charge-reduction may have occurred from plea bargaining or because the evidence or testimony supported only a lesser charge.

Of the 648,463 felony arrests, 386,974, or 60%, resulted in conviction. In the eight States reporting pre-adjudication dispositions, the police released 5% of the persons arrested for felonies, grand juries or prosecutors failed to indict 14%, and prosecutors filed *nolle prosequi* on 1.6%. (*Nolle prosequi* is notice to the court that the prosecutor will not pursue the case — in some jurisdictions following approval by the court.) Of the total number of persons prosecuted, the

courts dismissed 22% of the cases, acquitted the defendant in 1%, and rendered a judgment other than acquittal or conviction in 5% (table 3).

The percentage of cases resulting in conviction varied by type of offense. For example, convictions accounted for 78% of those prosecuted after an arrest for a public-order felony and 63% of those prosecuted following arrest for a violent felony. For court dismissals, however, the difference was in

Table 4. Likelihood of being convicted if prosecuted after arrest for a felony in 14 States, 1988

Rape	62
Assault	59

the opposite direction: courts dismissed cases of 32% of persons arrested for a violent felony and 16% of those arrested for a public-order felony.

Conviction in OBTS refers to any conviction following a decision to prosecute. Persons prosecuted after being arrested for public-order crimes that exclude weapons offenses had the highest conviction rates, 81% of those prosecuted (table 4). Among those prosecuted, those charged at arrest with burglary or homicide also had relatively high percentages of conviction (79% and 76%, respectively).

Dismissals, acquittals, and other nonconvictions among those prosecuted were highest for those charged with violent offenses; 37% of those prosecuted following arrest for a violent crime had their cases terminated by other than a conviction. Assault, with 41% of the cases ending by other than a conviction, rape (38% nonconviction), and kidnaping (37%) were the offenses with the highest percentages of prosecutions that resulted in no conviction.

Sentencing

Sentencing reflects the specific conviction offense, which may have been less serious than the arrest charge. For the OBTS data obtained from the 14 States in 1988, 66% of those convicted were sentenced to prison or jail, and 34% received probation or some other type of sentence without incarceration (table 5). Among persons arrested for a violent or property felony and convicted, there were two sentences to incarceration for every sentence to probation, fine, restitution, or community service.

Convicted persons arrested for the most serious violent crimes had the highest percentage of convicted offenders receiving a sentence to confinement. Of those arrested for homicide and then convicted of homicide or another offense, 88% received a sentence to incarceration. Among those arrested for rape, robbery, or drug offenses and subsequently convicted, 79% received a confinement sentence.

Fifty-six percent of convicted offenders who had been arrested for a public-order felony received a sentence that did not include confinement in prison or jail. When all sentences are considered together for offenders convicted in the 14 States in 1988, at least half of the persons arrested for motor vehicle theft, stolen property, a drug offense, other violent offenses, or

Note: Detail may not add to total because of rounding. Sentences given were not necessarily for the offense at arrest or for a felony.

*Includes 17,970 dispositions of "probation without verdict" meted out in Minnesota (287), Pennsylvania (17,661), and Utah (22).

burglary were sentenced to local jails (table 6). Following conviction, more than 7 of 10 persons arrested for homicide were sentenced to State prisons (table 7).

A reduction in offense seriousness from arrest to conviction, as cases passed through the criminal justice process, can be observed in the decreasing percentages in

all offense categories except public-order. As shown to the right, among those arrested for a felony and convicted of some offense, public-order offenses such as driving while intoxicated, gambling, and obstruction of justice accounted for about 17% of those convicted based on the arrest charge, but nearly 26% of those convicted based on the court-disposed offense.

Type of offense	Arrest offense	Conviction offense*
Total	100.0%	100.0%
Violent	20.5	15.7
Property	38.3	35.6
Drugs	24.4	22.8
Public-order	16.8	25.8

*The arrest offense was a felony; the offense at the time of disposition may have been a felony or misdemeanor.

Sentencing patterns observed for convicted offenders based on the court-disposed conviction offense were similar to those based on the arrest offense (tables 8 and 5). The more serious violent crimes, such as homicide and rape, reflected the highest percentages of prison commitments, while less serious public-order offenses resulted in higher percentages of convicted offenders receiving a nonincarceration sentence.

The three major sentencing options of probation, jail, and prison reveal substantial differences in the composition of those sentenced (table 9). For example, while robbers accounted for 4% of those convicted and about 2% of those sentenced to either probation or a local jail, they comprised 12% of offenders sentenced to prison. Violent offenders made up 26% of convicted defendants sentenced to prison but 13% of those sentenced to jail and 15% of those sentenced to probation.

^bIncludes rape, other sexual assaults, and type unspecified.

Demographic characteristics

The majority of persons arrested for a felony in the 14 participating States were male, white, and under age 30 (table 10).

Although men predominated among persons arrested for all the categories of felonies, their percentages were especially high among persons arrested for violent (90%) and public-order offenses (89%). Higher percentages of women were found among arrests for larceny (24%) and fraud (36%).

Sixty-one percent of persons arrested for a felony were white, 38% were black, and about 1% were Native Americans, Asians, or Pacific Islanders. This overall pattern also existed for drug and property offenders, but blacks were more highly represented among those arrested for violent offenses (48% of arrestees), while whites accounted for a larger percentage of public-order arrestees (76%).

Persons in their twenties accounted for 47% of those arrested for violent offenses, 47% of property arrestees, 52% of those arrested for drug violations, and 44% of those arrested for public-order felonies. These young adults were most overrepresented

among those arrested and charged with robbery, kidnaping, and motor vehicle theft. By contrast, arrestees of at least age 40 were overrepresented among those arrested for assault, arson, fraud, sexual assault other than rape, and public-order offenses other than weapons violations. The OBTS program is designed to account for adult felons and only those juveniles who are involved in very serious felonies and tried as adults in criminal courts. The data show that persons under age 20 are overrepresented among those arrested for robbery (23%), burglary (21%), motor vehicle theft (24%), other property (23%), stolen property (20%), and weapons violations (18%). Across the major offense categories, an overall decline in arrests was associated with increases in age, and regardless of category, persons in their twenties accounted for the largest percentage of arrests (figure 1).

Appendix

Felons and felonies

All 14 States under study provided ID numbers for both arrestees and arrest events. There were 616,149 final dispositions (excluding 32,314 unknown ID's) attributable to 501,299 arrestees, or 1.23 felony arrest events per offender.

Public-order offenses

The most frequently charged categories of public-order felonies at arrest included:

Driving-related felonies	40%
Weapons	21
Family-related felonies	9
Flight or escape	9
Sex offenses, excluding assault and commercialized sex	5
Obstruction of justice	5

Arrests, by offense and age of arrestee, 1988

Note: The sex, race, and age of persons arrested for felonies were reported in 99%, 97%, and 98% of the cases, respectively. Detail may not add to total because of rounding.
--Less than 0.5%.

Access to data

OBTS data are publicly available for the disposition years 1980 through 1988. Data for 1989 are being processed and should be available in late 1991. Researchers interested in analyzing the OBTS data may access them through the National Archive of Criminal Justice Data (NACJD) at the University of Michigan. Information can be obtained from NACJD/ICPSR, P.O. Box 1248, Ann Arbor, MI 48106; telephone (800) 999-0960.

Methodology

Local criminal justice agencies record arrest data and other information on fingerprint cards and disposition documents. The agencies forward the data to a State's criminal information repository that updates appropriate master records. OBTS receives data from the repositories. OBTS coverage may remain incomplete within the reporting States for several reasons. Not all law enforcement agencies fingerprint all persons arrested, and some do not submit all their fingerprint cards. Offenders sometimes surrender directly to a court and are not fingerprinted. Even when a fingerprint card is filed, the prosecutor or court may not report the final disposition.

BJS sponsored a survey of 50 States and the District of Columbia to assess the quality of data in the criminal record repositories at the end of 1989. As noted above, jurisdictions varied in the completeness of reporting. Interested readers can refer to the report, *Survey of Criminal History Information Systems* (NCJ-125620, March 1991), to gain estimates of the amount and type of missing data.

BJS annually solicits State repositories to extract and submit data from their master records, following OBTS guidelines. Some States are in the process of automating their criminal-history files and cannot participate. Other States do not participate because of insufficient reporting by local agencies, criminal-history files not designed for statistical extraction, or lack of resources.

In 1990 BJS and the Bureau of Justice Assistance (BJA) initiated a joint program to make systematic improvements in the quality and timeliness of State criminal-history records information throughout the country. The program has a duration of 3 years and an annual budget of \$9 million. Additional resources will be made available

by BJA beginning in fiscal year 1992. It is anticipated that one by-product of this effort will be increased State participation in OBTS and general improvement in the quality and completeness of the data submitted.

To ensure comparability among States, the OBTS standards use the FBI's National Crime Information Center (NCIC) offense codes. To preserve privacy, an OBTS record uses as personal identifiers only an encrypted identification number (to permit study of repeat offenders), sex, race, and age.

OBTS data are based on the year of final disposition, not on the year of arrest. Thus, an OBTS year includes arrests that occurred in an earlier year. A final disposition refers to either a decision not to prosecute or a trial court finding, not to an appeal.

Bureau of Justice Statistics Bulletins are written principally by BJS staff. This report was written by Jacob Perez. Tom Hester edited the report, and Brian Reaves provided statistical review. Priscilla Middleton assisted with graphics. Marilyn Marbrook administered production, assisted by Priscilla Middleton, Jayne Pugh and Yvonne Boston.

June 1991, NCJ-129861

The Assistant Attorney General, Office of Justice Programs, coordinates the activities of the following program offices and bureaus: Bureau of Justice Statistics, National Institute of Justice, Bureau of Justice Assistance, Office of Juvenile Justice and Delinquency Prevention, and Office for Victims of Crime.

Bureau of Justice Statistics Reports

(Revised July 1991)

Call toll-free 800-732-3277 (local 301-251-5500) to order BJS reports, to be added to one of the BJS mailing lists, or to speak to a reference specialist in statistics at the Justice Statistics Clearinghouse, National Criminal Justice Reference Service, Box 6000, Rockville, MD 20850.

BJS maintains the following mailing lists:

- Law enforcement reports (new)
- Drugs and crime data (new)
- Justice spending & employment
- White-collar crime
- National Crime Survey (annual)
- Corrections (annual)
- Courts (annual)
- Privacy and security of criminal history information and information policy
- Federal statistics (annual)
- BJS bulletins and special reports (approximately twice a month)
- Sourcebook of Criminal Justice Statistics (annual)

Single copies of reports are free; use NCJ number to order. Postage and handling are charged for bulk orders of single reports. For single copies of multiple titles, up to 10 titles are free; 11-40 titles \$10; more than 40, \$20; libraries call for special rates.

Public-use tapes of BJS data sets and other criminal justice data are available from the National Archive of Criminal Justice Data (formerly NCJIN), P.O. Box 1248, Ann Arbor, MI 48106 (toll-free 1-800-999-0960).

National Crime Survey

The Nation's two crime measures: Uniform Crime Reports and the National Crime Survey, NCJ-122705, 4/90

Please put me on the mailing list for—

- Law enforcement reports**—national data on State and local police and sheriffs' departments: operations, equipment, personnel, salaries, spending, policies, programs
- Federal statistics**—data describing Federal case processing, from investigation through prosecution, adjudication, and corrections
- Drugs and crime data**—sentencing and time served by drug offenders, drug use at time of crime by jail inmates and State prisoners, and other quality data on drugs, crime, and law enforcement
- Justice expenditure and employment reports**—annual spending and staffing by Federal/State/local governments and by function (police, courts, etc.)

- White-collar crime**—data on the processing of Federal white-collar crime cases
- Privacy and security of criminal history information and information policy**—new legislation; maintaining and releasing intelligence and investigative records; data quality issues
- Juvenile corrections reports**—juveniles in custody in public and private detention and correctional facilities
- BJS bulletins and special reports**—timely reports of the most current justice data
- Prosecution and adjudication in State courts**—case processing from prosecution through court disposition, State felony laws, felony sentencing, criminal defense

- Corrections reports**—results of sample surveys and censuses of jails, prisons, parole, probation, and other corrections data
- National Crime Survey reports**—the only regular national survey of crime victims
- Sourcebook of Criminal Justice Statistics** (annual)—broad-based data from 150+ sources (400+ tables, 100+ figures, subject index, annotated bibliography, addresses of sources)
- Send me a form to sign up for **NCJ Reports** (free 6 times a year), which abstracts both private and government criminal justice publications and lists upcoming conferences and training sessions in the field.

To be added to any BJS mailing list, copy or cut out this page, fill it in and mail it to:
