

Answering a call using your Via Video

If you would like to answer a call manually . . .

When there is an incoming call, Via Video activates a ring tone and opens up a dialogue box.

The box shows the name of the far site and its IP address.

You can either accept/receive the call or not. If call is accepted the connection will be made.

If you would like your Via Video System to answer calls automatically . . .

You can set the system to answer incoming video calls automatically whenever the system is not already in Call mode.

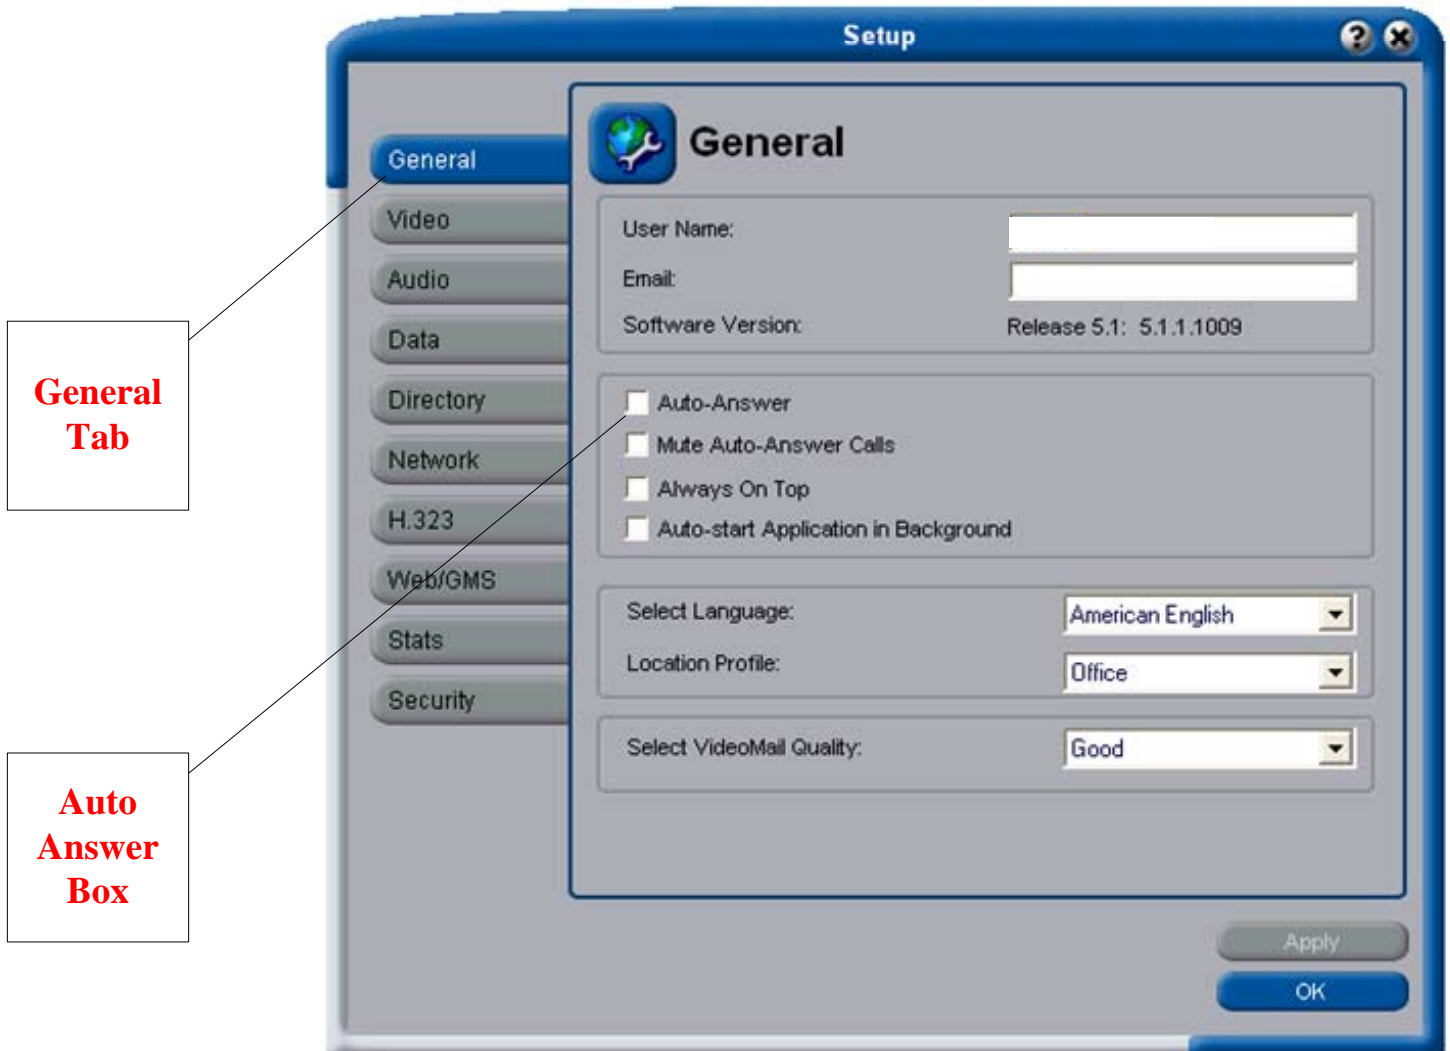

To have ViaVideo answer incoming calls automatically, begin by clicking on the lower case “I” in the top left hand corner.

A Setup Chart will appear on your screen.

Continue by selecting the General Tab.

Then, check the Auto Answer box.

Via Video activates a ring tone and automatically connects with the far site attempting to contact you.
