

Guidelines and Requirements for Hosts

February 2013

NOAA Coastal Services Center

(843) 740-1200

www.csc.noaa.gov

Introduction

The National Oceanic and Atmospheric (NOAA) Coastal Services Center brings a wide variety of trainings to communities or region when requested to do so by local host agencies or organizations involved in coastal resource management. This document provides a guide to preparing for these events. For more information, and a list of currently offered courses, visit the Center's training webpage:

www.csc.noaa.gov/training.

To schedule a course: Contact the Center through <http://www.csc.noaa.gov/training/store> or at csc.training.request@noaa.gov to request a specific course and preferred dates. A trainer will contact you to discuss the Center's ability to provide the course.

Center Responsibilities

The Center provides trainers and usually pays for trainer travel costs. In addition, the Center provides training materials and audio-visual presentations, as well as some training supplies. Finally, the Center provides a draft agenda and works with the local host if the agenda needs to be modified.

Host Responsibilities

Once training dates have been confirmed by the Center, the local host agrees to complete the following tasks:

- Reserve and pay for all facility costs necessary for successful course completion. These include ensuring a room of sufficient size, appropriate lighting, tables and seating for participants and trainers, and accessible electrical outlets. If required, accommodations for special-needs participants must be secured. If the minimum attendance requirement is not met, the local host should ensure that the use of the facility can be cancelled without penalty.
- Create and send out invitations to potential participants and handle the registration process. The local host should invite project partners, including stakeholders and appropriate coastal resource management entities in the region that might benefit from the training (e.g., National Estuarine Research Reserves, Sea Grant, Coastal Zone Management programs, and NOAA National Marine Sanctuary or Fisheries offices). For most courses, participant registration must be finalized two weeks before the course start date (four weeks for specific geospatial courses).
- Provide the trainers with hotel recommendations and obtain a block of hotel rooms for participants, if appropriate.

- Arrange for break and lunch refreshments (lunch may be catered on-site or participants may go out on their own for the hour, if eateries are nearby). If funds are not available for a catered lunch, the host may charge participants a registration fee to cover any incurred expenses.
- Provide an LCD projector, overhead projector, screen or white board, and self-sticking easel pads.
- Coordinate with the trainers to provide any other necessary audio-visual equipment and training supplies.
- Each course may have specific additional requirements. Please discuss with trainer as the course is being scheduled.

Additional Host Responsibilities for Computer-Dependent (Geospatial) Courses

- The host must provide a computer lab with technical support and a minimum of 12 participant computers and 1 instructor computer that meet the following minimum requirements:
 - o 1.6 gigahertz Intel Core Duo, Pentium, or Xeon processor
 - o 1 gigabyte of RAM
 - o Windows 2000 or higher
 - o 20 gigabyte hard drive
 - o Instructor computer must have Microsoft PowerPoint installed
 - o Internet access
- Center geospatial courses are typically developed for use with ESRI's ArcGIS software. Some courses may require ArcGIS extensions as well (e.g., Spatial Analyst). It is preferred that the facility have the necessary ESRI licenses for use. If these are not available, the host should inform Center instructors a minimum of three weeks before course delivery so the Center can make arrangements for acquiring temporary licenses for use during the course.
- The host must provide Center instructors with access to the training lab the day before the start of computer-dependent courses. Center instructors will install all software and data needed for course exercises. At the end of class, the instructors will uninstall the data and software and make every attempt to delete all files put on the computer during the class.

Attendance Requirements

- **For non-computer-dependent courses**, such as those in coastal management issues and process skills, the host will guarantee the attendance of no fewer than 25 participants. Registration is limited to 35 participants.
- **For computer-dependent courses**, such as those in geospatial technology, the host will guarantee the attendance of no fewer than 12 participants. Registration is limited to 35 participants (or fewer, depending on the spaces available in the computer lab).
- The Center may request that the local host reserve up to 3 individual participant openings.
