NRC TO DISCUSS 2005 PERFORMANCE ASSESSMENT FOR NINE MILE POINT NUCLEAR POWER PLANT

Nuclear Regulatory Commission staff will meet with representatives of Nine Mile Point Nuclear Station, LLC, on Wednesday, April 26, to discuss the agency's annual assessment of safety performance at the Nine Mile Point nuclear power plant. The period of performance to be discussed is Jan. 1 to Dec. 31, 2005.

Nine Mile Point Nuclear Station, LLC, operates the twin-reactor plant, located in Scriba, N.Y.

The meeting, which will be open to the public for observation, is scheduled to begin at 3 p.m. at the plant's Joint News Center, located at the Oswego County Airport, on County Route 176 in Fulton, N.Y. The NRC staff will present the results of the assessment and be available to respond to questions or comments from the public before the close of the meeting.

"As we do every year, we have carefully reviewed the safety performance of the Nine Mile Point nuclear power plant during the previous calendar year," NRC Region I Administrator Samuel J. Collins said. "The meeting on April 26th will afford the public a chance to learn more about the results of our assessment and to pose any questions they might have regarding plant performance or our oversight activities."

A letter sent from the NRC Region I Office to plant officials addresses the performance of the plant during the period and will serve as the basis for the meeting discussion. It is available on the NRC web site at: http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/LETTERS/nmp_2005q4.pdf. The meeting notice, with the meeting agenda attached, is available in the NRC's Agencywide Documents Access and Management System (ADAMS) under accession number ML060860265. The NRC slides for the meeting are available in ADAMS under accession number ML060950037. ADAMS is accessible via the agency's web site at: <http://www.nrc.gov/reading-rm/adams.html>. Help in using ADAMS is available by contacting the NRC's Public Document Room at 1-800-397-4209 or 301-415-4737, or by e-mail at PDR@NRC.GOV.

Overall, the Nine Mile Point plant operated safely during the period. The NRC uses color-coded inspection findings and performance indicators to assess nuclear power plant performance. The

colors start with “green” and then increase to “white,” “yellow” or “red,” commensurate with the safety significance of the issues involved. Because all of the inspection findings and performance indicators for Nine Mile Point Units 1 and 2 during 2005 were determined to be “green,” the plant will receive a baseline (or routine) level of inspections during the upcoming assessment period.

Routine inspections are performed by three NRC Resident Inspectors assigned to the plant and by inspection specialists from the Region I Office in King of Prussia, Pa. Among the areas of plant operations to be inspected during the next year by NRC specialists are radiological safety, fire protection and emergency planning.

Current performance information for Nine Mile Point Unit 1 is available on the NRC web site at: http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/NMP1/nmp1_chart.html .

Current performance information for Nine Mile Point Unit 2 is available on the NRC web site at: http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/NMP2/nmp2_chart.html .
