### Attachment 1: Summary of Public Comments

Commenter #	Will data be of value regarding Navy ops?	Will one years data be enough?	Annual tagging to meet data goals could impact health of pop	Will there be follow up on tagging effects?	Will there be realtime follow up?	No alternate means proposed	No binding agreement to tagging only adult males and post reproductive females	How are post reproductive females determined?	Increased suction cup tagging not worth disturbance	Benefits do not outweigh risk (or value lacking)	Leave winter range a mystery/not important

### Attachment 1: Summary of Public Comments

Commenter #	Winter range includes Canada, US has no control over regulation there	Winter range already known: obvious animals go to mouth of Columbia to feed in winter on salmon	Help salmon first/ mitigate other impacts	Other tools available (SCAT, acoustic, visual surveys)	Aerial surveys could be more effective/less intrusive	Important to know where they are going in winter: not well known	Would help track whales	Education benefit	Conservation benefit	Tagging methods are safe and effective
