<sup>1</sup> The incidence rates represent the number of injuries per 100 full-time workers and were calculated as: (N/EH) x 200,000, where

N = number of injuries  
 EH = total hours worked by all employees during the calendar year  
 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year)

<sup>2</sup> High rate industries were those having at least 500 cases and among the 20 highest total cases incidence rates for injuries at the most detailed level of rate calculation and

publication, based on the *North American Industry Classification System-- United States, 2002*.

<sup>3</sup> *North American Industry Classification System -- United States, 2002*

<sup>4</sup> Employment is expressed as an annual average and is derived primarily from the BLS-Quarterly Census of Employment and Wages (QCEW) program.

<sup>5</sup> Excludes farms with fewer than 11 employees.
