The Tennessee Valley Authority has prepared a Draft Environmental Assessment of a proposal to reduce sulfur dioxide (SO₂) emissions at Kingston Fossil Plant, in Roane County, Tennessee, by installing flue gas desulfurization equipment that employs the wet limestone forced oxidation technology. TVA needs to reduce system wide SO₂ emissions to meet requirements under the 1990 Clean Air Act amendments. Reductions at Kingston Fossil Plant would help TVA meet those requirements. This Draft Environmental Assessment considers the impacts of the No Action Alternative and variations of the Action Alternative.

Public Involvement

TVA will accept public comments on the DEA from February 28, 2006 to March 29, 2006.
