Subject: Required free water volume at KIF

You guys probably are already doing this, but we need to include the volume of our FGD sluice water in the minimum free water volume to be left after the next dredge cell is developed. Also, we need to provide for an operational buffer in case the dredge goes down or something else happens. Maybe space for 2 to 6 months total waste production? Again you all are probably factoring all of this in but I wanted to make sure. We need to be as accurate as possible in our capacity estimates.
