Lets try this again. How about April 1?

Subject: TVA KIF Scrubber Gypsum Stack on Peninsula - PR-0637

We discussed having another technical meeting to discuss the fatal flaw analysis for the peninsula site. I was at KIF today and Mactec is planning on wrapping up field work by early next week (weather permitting), and they felt that they would have their report out on schedule (late next week).

We discussed that a good time for this meeting would be the week of April 4th. I think this week would work out well with Yogesh Shah, Parsons E&C Geotechnical Engineer from Reading. I will verify this with him. You also said that Wednesday the 2nd was not a good day for you.

If you could let me know an exact day that week when we could get together, we'll book a flight for Yogesh. If we schedule 3 weeks early, hopefully we'll save some money.

Thanks

Subject: FW: Some additional changes to KIF Gypsum Stack proposal - Parsons PR-0637

Ted-

FYI....This is in relation to the KIF Gypsum Stack project. I will update you on this project this afternoon.

Thanks,
Cherie

Based on verbal authorization from Lynn, we are working on the 2 concepts for the gypsum stack at the ash disposal area. We've noticed that there are some slight differences in the shape of the base of the ash stack versus design (certainly not unexpected). We are massaging the design contours slightly to match existing, in order to establish a baseline for the ash stack for use in determining the volume for the gypsum in the second concept (gypsum piled against the ash stack). I've revised the draft SOW for that and a couple of other things. Its not in edit mode, but I manually highlighted in red some changes (one item was just moved), and struck out a sentence somewhere else.

Attached is the revised text. Please take a minute to review this morning if possible and let me know if this is ok. If so, I will try to get the formal proposal over to you late today or Monday. I plan on being at Kemper Mon-Wed next week. If you need to reach me today, I'm in Oak Ridge at 865.220.4528.

Thanks

I can wait for you to finish the report. If you would send me two copies to Chattanooga, when you send the report to TVA that would be fine with me. I can review it then, and I will forward the other copy to our geotechnical engineer in Reading PA.

By the way, Larry Bowers has scheduled a meeting for April 1 at the site. I'm not sure if he has made an announcement to everyone, though. Our geotechnical engineer (Yogesh Shah) will make a site visit and will be there that day for the meeting.

Dan

Dan,
We have completed the field testing and exploration yesterday. We have the samples in the lab and the logs being drafted. We expect to publish the report middle to end of next week (3/19 to 3/21). Sorry the weather was bad and delayed our starting date. If you need any of the refusal depths or core logs, we can provide those by Monday.

Please call me or leave me a message as to what you like me to do.

Thanks
Mohamed
