D. A. Howard, BR 3D-C

KINGSTON FOSSIL PLANT - COAL YARD RUNOFF POND COST ESTIMATE

Please find attached the revised cost estimate for the Phase I study of the coal yard runoff pond. Note that the cost estimate is contingent upon Fossil Engineering Services performing the study. FES has proposed a start date of April 4. If you will require an earlier start date, we will have to ask Gilbert/Commonwealth to perform the study, and more money will likely be required.

Please call me at 7319 if you need additional information.

KINGSTON FOSSIL PLANT

COAL YARD RUNOFF POND

1.0 BACKGROUND

Heavy rains have in the past caused flows to be by-passed around the coal yard drainage pond. The by-passed flows were reported as not complying with the NPDES permit for the pond. It is reported that the two existing pumps are not well suited for the system operating conditions and do not operate reliably.

2.0 PROJECT DEVELOPMENT

- 1) Provide a detailed scope statement for Phase I action. A suggested minimum list of items follows in section 3.0.
- 2) Provide a detailed cost estimate for Phase I.
- 3) Estimate expected duration for performing Phase I.
- 4) Phase I would begin in February 1994 or March 1994.
- 5) Identify possible constraints identified for performing this project in any Phase.

3.0 PHASE I SCOPE

- 1) Meet with plant and other interested personnel to discuss any additional information, verify scope, and review preliminary plans, proposed solutions, and expectations from the project.
- A hydrologic analysis of the pond and existing pumping capacity will be performed in order to determine if the system will contain the 10-year 24-hour storm. Should it be determined that the system will not contain the above design storm, alternatives would be formulated and evaluated for containing the design storm. Should it be shown that the existing system is capable of containing the design storm, then alternatives for upgrading and improving the reliability of the system will be examined. Improving reliability will be examined by considering such additions as new pumps, new controls, electrical improvements, piping modifications, and other options as appropriate. The analysis of alternatives would result in the selection of a recommended alternative.
- Determine the location, routing, and connection points of any additional piping, valves, and equipment to be installed.
- 4) Determine the drawings and documents which will require revising or preparing.
- 5) Develop and prepare a detailed engineering hours estimate and resource loaded

schedule for Phase II engineering.

- Determine the possible impacts the rehabilitated system will have on any existing or remaining components in the system.
- 7) Review similar systems at other sites for possible information sharing.
- 8) Determine all possible state, federal, or local permits which will be required in the execution of this project.
- 9) Identify needed coordination with local, state, or federal agencies.
- Provide a cost estimate to prepare the Phase II estimate and schedule for Phase III implementation.
- 11) Determine possible environmental issues to be addressed during any Phase.
- Provide input to the Estimating Section, including identification of long lead procurement items to assist in preparation of the Phase II detailed estimate and Phase III preliminary estimate.
- 13) Develop and prepare a preliminary Phase III cost estimate.

4.0 PHASE I DELIVERABLES

- 1) Minutes of meetings documenting agreements made on actions to be taken, schedule, etc.
- 2) Memorandums, letters, and documents to the plant, engineering, Mod Svs, partners, etc.
- 3) List of local, state, and federal permits required.
- 4) Detailed hours estimate and schedule for Phase II engineering activities.
- 5) List of drawings and documents to be prepared or revised in Phase II.
- 6) A detailed cost estimate for Phase II and a preliminary estimate for Phase III.
- 7) Copy of all calculations performed.
- 8) Cost estimate from Mods Partner to prepare estimate and level IV schedule, and to participate in a constructability review in Phase II.
- 9) Conceptual drawings indicating the proposed alternative.

- 10) List of all alternatives considered with the evaluation of each alternative. The evaluation should include a conceptual cost estimate for each alternative.
- 11) List of all assumptions made.
- 12) Final project Phase I report.
