

KIF – JPT FGD-Petty Intro

~~I want to introduce Dan Smith as one of our Engineering partners on this project. He is with Parsons and is helping us with the permitting and design of the waste disposal facility.~~

Our presentation is organized into four parts:

First we are going to talk about Strategy and how it relates to design and initial construction of the disposal facility

Second we are going to present an overview of the General Layout and plans

Third we are going to briefly focus on the marketers' area, the sed pond, laydown interface – There is a need to coordinate the land available between several parties. We have a need to set up a separate coordination meeting to address some issues we have discovered here.

Fourth we will present the concept of a responsibilities matrix between who is responsible for what with regards to gypsum output form the FGD.
