KIF Stormwater Correspondence
(Exceedance Corrective Action)

April 9, 2008

Ms. Natalie Harris, Manager
Knoxville Environmental Field Office
Division of Water Pollution Control
Tennessee Department of Environment & Conservation
3711 Middlebrook Pike
Knoxville, Tennessee 37921

Dear Ms. Harris,

**TENNESSEE VALLEY AUTHORITY (TVA) - KINGSTON FOSSIL PLANT (KIF) -
TENNESSEE MULTI-SECTOR PERMIT NUMBER TNR051787 - EFFLUENT CUT-OFF
CONCENTRATION EXCEEDANCE & CORRECTIVE ACTIONS**

As required by the permit under Section IV.C, notification is given that annual analysis at outfall F6A at KIF has exceeded storm water monitoring results with effluent concentrations above the monitoring cut-off concentration of 5.0 mg/L Total Iron. We are submitting the following monitoring information for the annual sample:

1. Storm Water Outfall # F6A

Outfall Description:

This storm water outfall carries runoff from the southwest plant yard area (8.1 acres) located south west of the powerhouse including the area around Units 5-9 precipitators and the coal conveyor from the crusher building to the powerhouse.

Storm water Monitoring Data Summary

Annual 2008 = 7.8mg/L Total Iron

Cut-Off Concentration

5.0 mg/L Total Iron

Likely Source(s) of Pollution:

An increase in heavy equipment traffic in the area of this outfall due to major site construction has resulted in several damaged storm drain protective devices.

Summary of Corrective Actions:

All the storm drain protective devices are being replaced near the area of this outfall. New eels and filter fabric are being installed at each location. Additional barriers have been erected in areas where traffic is high. The storm drain protection inspection frequency has also been increased.

Ms. Natalie Harris
