

CHART 33

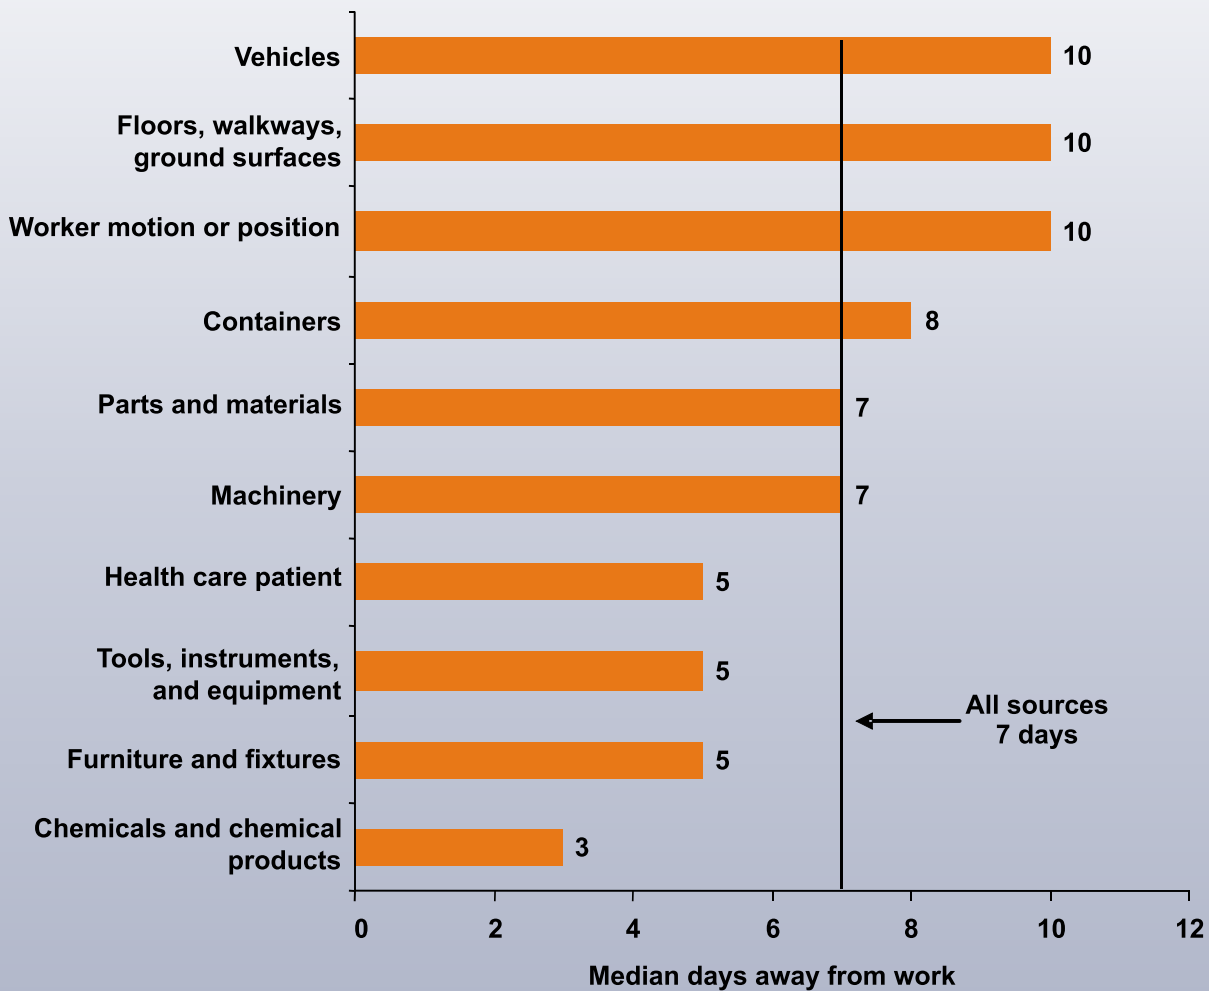

Cases with vehicles; floors, walkways, ground surfaces; and worker motion or position as the source had the highest median number of days away from work, with 10 days each.

These three sources had the highest median number of days away from work in 2004 as well, and the number of median days stayed the same, at 10 days each.

The median number of days away from work for injuries from machinery, from health care patients, and from furniture and fixtures all declined by 1 day from 2004 to 2005. Cases involving containers; tools, instruments, and equipment; and chemicals and chemical products all had the same median number of days away from work in 2004 and 2005.

Median number of days away from work due to injuries or illnesses, by source, 2005
