

## Summary Report of Occurrences Reviewed

*From April 30 – May 4, 2006*

**Summary:** 30 occurrences at 12 sites reviewed during this period.

### **Significant Occurrences (4)**

#### **Near Misses – 2 occurrences at 2 sites**

- **EM – East Tennessee Technology Park (Significance Category 3).** On April 21, 2007, a two-pound piece of grout broke free and fell approximately eight feet, striking a worker on the front of the hard hat during removal of transite sheathing. The worker was medically evaluated at Methodist Medical Center.
- **NA – Lawrence Livermore National Laboratory (Significance Category 3).** On April 23, 2007, a LLNL worker failed to stop the feed on a band saw after cutting aluminum plate and the saw blade lacerated his index finger. The worker received five stitches at the on-site medical facility and was sent back to work.

#### **Shipping – Quality Assurance/Explosives Safety – 1 occurrence at 1 site**

- **NA – Lawrence Livermore National Laboratory (Significance Category 3).** On May 1, 2007, Pantex's inspection of eighteen "empty" detonator shipping containers received from LLNL found one containing an exploding bridgewire detonator (reported previously in NA--PS-BWXP-PANTEX-2007-0055). The detonator contained less than one gram of high explosives.

#### **Authorization Basis/Radiological Control – 1 occurrence at 1 site**

- **NA – Los Alamos National Laboratory (Significance Category 2).** On April 26, 2007, a four month inventory reconciliation effort was undertaken to re-baseline the transuranic waste inventory in TA-54. This effort determined that 38 waste container inventories could not be reconciled. Existing data on those 38 waste containers indicate a total inventory of 169 plutonium equivalent curies of radioactive material, which exceeds the 10 CFR Part 835, Appendix E limit for Pu-239.

**Other Occurrences (26).** See Table (Note: The Table includes the occurrences listed above).
