

Public Notice Submission

Provider Name: AT&T

Summary: AT&T is providing data about its last mile wireline and mobile broadband footprint to assist NTIA in their review of Comprehensive Community Infrastructure (CCI) applications. In addition, USTelecom previously provided to NTIA maps containing aggregate industry information about the location of Internet gateways throughout the country which included AT&T data. Such maps should be referenced by NTIA for review of CCI applications as the maps provide an indication of the presence of existing middle mile infrastructure. AT&T offers a wide range of broadband services for business and government customers including ethernet and high capacity optical transport services. Additional information regarding other broadband service providers currently operating in applicants' proposed service areas may be needed in order to conduct a thorough review of the presence of broadband infrastructure.
