

## **Public Notice Submission**

**Provider Name:** Intelleq Communications

**Summary:** The attached information represents Intelleq Communications' privately owned fiber optic network that starts at the eastern edge of Oklahoma City and extends all the way to and throughout the western region of Oklahoma and into the eastern portion of the Texas Panhandle. Our fully redundant network allows us to provide a vast array of telecommunications services ranging from basic DSL internet access to Ethernet 1000 Mbps, while including other important services like OCn Access, Dark Fiber, ATM and IP, depending upon the location: These services are currently being offered today to anchor institutions, along with other public/private telecommunication service providers. Our BTOP application (5725), when funded, will allow Intelleq Communications to expand its network into 45 communities with fiber directly to 145 anchor institutions. Due to Intelleq's existing network and infrastructure, Intelleq has the foundation to expand services to the anchor institutions in the most cost effective manner in our proposed areas.
