

Public Notice Submission

Provider Name: Pixius Communications, LLC

Summary: Pixius Communications, LLC provides fixed wireless broadband service from 58 access points / towers within its service area. The service area of each tower is generally described as a ten mile radius from the access point / tower. Within that area, service is marketed in three residential tiers and three business tiers. The download and upload speed in each tier is stated as the minimum that the customer will be provided instead of the more common 'up to' advertised speeds. The customer typically experiences a grade of service that is better than the rate specified in the service agreement. Higher speeds are available on an individual case basis as is evident by the available capacity at the access point / tower. Pixius has a number of customers who subscribe to service at levels higher than the advertised rates.
